For vehicles with a navigation system, refer to the “Navigation System Owner’s Manual” for information regarding the equipment listed below.

- Navigation system
- Air conditioning controls
- Windshield wiper de-icer
- Rear view mirror system

- Intuitive parking assist
- Audio/video system
- Rear window and outside rear view mirror defogging

## 1 Before driving

### 1-1. Hybrid system
- Hybrid system .................................. 30
- Hybrid system precautions ........ 34
- Energy monitor/ consumption screen ........... 40
- Hybrid vehicle driving tips .......... 45

### 1-2. Key information
- Keys ...................................................... 47

### 1-3. Opening, closing and locking the doors
- Smart access system with push-button start ............... 52
- Wireless remote control .............. 64
- Side doors .......................................... 67
- Back door ........................................... 70

### 1-4. Adjustable components
(seats, mirrors, steering wheel)
- Front seats ......................................... 82
- Rear seats ............................................ 86
- Driving position memory ............. 90
- Head restraints ................................. 95
- Seat belts ......................................... 97
- Steering wheel ................................ 105
- Anti-glare inside rear view mirror ...................................................... 107
- Outside rear view mirrors ........ 109

### 1-5. Opening and closing the windows and moon roof
- Power windows .................................. 112
- Moon roof ......................................... 115

### 1-6. Refueling
- Opening the fuel tank cap ............. 119

### 1-7. Theft deterrent system
- Immobilizer system ....................... 124
- Alarm .................................................. 126
- Theft prevention labels (for U.S.A.) ............ 129
1-8. Safety information
Correct driving posture .......... 130

4 Maintenance and care

4-1. Maintenance and care
Cleaning and protecting the vehicle exterior .......... 492
Cleaning and protecting the vehicle interior .......... 495

4-2. Maintenance
Maintenance requirements.............................. 498
General maintenance ................................... 501
Emission inspection and maintenance (I/M) programs ........................................ 505

4-3. Do-it-yourself maintenance
Do-it-yourself service precautions .......................... 506
Hood ................................................. 509
Positioning a floor jack .............................. 510
Engine compartment ................................. 512
12-volt battery ........................................... 525
Tires ...................................................... 532
Tire inflation pressure ................................ 541
Wheels ................................................. 545
Air conditioning filter .................................. 547
Electronic key battery ................................... 550
Checking and replacing fuses ................................... 552
Headlight aim ............................................. 568
Light bulbs ............................................. 571

5 When trouble arises

5-1. Essential information
Emergency flashers .................................. 590
If your vehicle needs to be towed .......................... 591
If you think something is wrong .......................... 597

5-2. Steps to take in an emergency
If a warning light turns on or a warning buzzer sounds... .......................... 598
If a warning message is displayed .................................. 608
If you have a flat tire ................................... 629
If the hybrid system will not start .......................... 643
If the shift lever cannot be shifted from P .......................... 645
If you lose your keys ................................... 646
If the electronic key does not operate properly .............. 647
If the vehicle 12-volt battery is discharged .................. 650
If your vehicle overheats ................................ 655
If the vehicle becomes stuck ................................ 660
If your vehicle has to be stopped in an emergency ...... 661
6 Vehicle specifications

6-1. Specifications
   Maintenance data (fuel, oil level, etc.) .................. 664
   Fuel information ........................................... 676
   Tire information ............................................ 680

6-2. Customization
   Customizable features ................................. 693

6-3. Initialization
   Items to initialize ........................................ 702

7 For owners

For your information

Main Owner’s Manual

Please note that this manual applies to all models and explains all equipment, including options. Therefore, you may find some explanations for equipment not installed on your vehicle.

All specifications provided in this manual are current at the time of printing. However, because of the Lexus policy of continual product improvement, we reserve the right to make changes at any time without notice.

Depending on specifications, the vehicle shown in the illustrations may differ from your vehicle in terms of color and equipment.

Noise from under vehicle after turning off the hybrid system

Approximately five hours after the hybrid system is turned off, you may hear sound coming from under the vehicle for several minutes. This is the sound of a fuel evaporation leakage check and, it does not indicate a malfunction.

Accessories, spare parts and modification of your Lexus

A wide variety of non-genuine spare parts and accessories for Lexus vehicles are currently available in the market. You should know that Toyota does not warrant these products and is not responsible for their performance, repair, or replacement, or for any damage they may cause to, or adverse effect they may have on, your Lexus vehicle.

This vehicle should not be modified with non-genuine Lexus products. Modification with non-genuine Lexus products could affect its performance, safety or durability, and may even violate governmental regulations. In addition, damage or performance problems resulting from the modification may not be covered under warranty.
Installation of a mobile two-way radio system

The installation of a mobile two-way radio system in your vehicle could affect electronic systems such as:

- Hybrid system
- Multiport fuel injection system/sequential multiport fuel injection system
- Cruise control system
- Dynamic radar cruise control system
- Anti-lock brake system
- SRS airbag system
- Seat belt pretensioner system

Be sure to check with your Lexus dealer for precautionary measures or special instructions regarding installation of a mobile two-way radio system.

High voltage parts and cables on the hybrid vehicles emit approximately the same amount of electromagnetic waves as the conventional gasoline powered vehicles or home electronic appliances despite of their electromagnetic shielding.

Unwanted noise may occur in the reception of the mobile two-way radio.

Scraping of your Lexus

The SRS airbag and seat belt pretensioner devices in your Lexus contain explosive chemicals. If the vehicle is scrapped with the airbags and seat belt pretensioners left as they are, this may cause an accident such as fire. Be sure to have the systems of the SRS airbag and seat belt pretensioner removed and disposed of by a qualified service shop or by your Lexus dealer before you scrap your vehicle.

Perchlorate Material

Special handling may apply, See www.dtsc.ca.gov/hazardouswaste/perchlorate.

Your vehicle has components that may contain perchlorate. These components may include airbag, seat belt pretensioners, and wireless remote control batteries.
Vehicle control and operation data recording

Your Lexus is equipped with sophisticated computers that record certain information about your vehicle’s operation, such as:

- Engine speed
- Motor speed
- Accelerator status
- Brake status
- Vehicle speed
- Shift position

The data recorded varies according to the grade level and options the vehicle is equipped with. The computers do not record conversations, sound or pictures.

Data usage

Lexus may use the data recorded in these computers to diagnose malfunctions, conduct research and development, and improve quality.

Lexus will not disclose the recorded data to a third party except:

- With the consent of the vehicle owner or with the consent of the lessee if the vehicle is leased
- In response to an official request by the police, a court of law or a government agency
- For research purposes where the data is not tied to a specific vehicle or vehicle owner
● Event data recorder

Your vehicle has computers that monitor and control certain aspects of your vehicle. These computers assist in driving and maintaining optimal vehicle performance.

Besides storing data useful for troubleshooting, there is an event data recorder (EDR) that records data in a crash or near crash event.

The SRS airbag sensor assembly contains the EDR. In a crash or near crash event, this device may record the following information:

• Engine speed
• Whether the brake pedal was applied or not
• Vehicle speed
• To what extent the accelerator pedal was depressed
• Position of the transmission shift lever
• Whether the driver and front passenger wore seat belts or not
• Driver’s seat position
• SRS airbag deployment data
• SRS airbag system diagnostic data
• Front passenger’s occupant classification

The information above is intended to be used for the purpose of improving vehicle safety performance. Unlike general data recorders, the EDR does not record sound data such as conversation between passengers.

● Disclosure of the EDR data

Lexus will not disclose the data recorded in an EDR to a third party except when:

• An agreement from the vehicle’s owner (or the leasing company for a leased vehicle) is obtained
• Officially requested to by the police or other authorities
• Necessary, for use as a defense for Lexus in a lawsuit
• Ordered to by a court of law

However, if necessary, Lexus will:

• Use the data for research on Lexus vehicle safety performance
• Disclose the data to a third party for research purposes without disclosing details of the vehicle owner, and that only when deemed necessary
• Disclose summarized data cleared of vehicle identification information to a non-Lexus organization for research purposes
● Lexus Safety Connect /Lexus Enform (U.S. mainland only)

If your Lexus has Safety Connect or Lexus Enform and if you have subscribed to those services, please refer to the Safety Connect /Lexus Enform Telematics Subscription Service Agreement for information on data collected and its usage.

⚠️ CAUTION

■ General precautions while driving

Driving under the influence: Never drive your vehicle when under the influence of alcohol or drugs that have impaired your ability to operate your vehicle. Alcohol and certain drugs delay reaction time, impair judgment and reduce coordination, which could lead to an accident that could result in death or serious injury.

Defensive driving: Always drive defensively. Anticipate mistakes that other drivers or pedestrians might make and be ready to avoid accidents.

Driver distraction: Always give your full attention to driving. Anything that distracts the driver, such as adjusting controls, talking on a cellular phone or reading can result in a collision with resulting death or serious injury to you, your occupants or others.

■ General precaution regarding children’s safety

Never leave children unattended in the vehicle, and never allow children to have or use the key.

Children may be able to start the vehicle or shift the vehicle into neutral. There is also a danger that children may injure themselves by playing with the windows, the moon roof, or other features of the vehicle. In addition, heat build-up or extremely cold temperatures inside the vehicle can be fatal to children.
CAUTION

Disposal of the hybrid battery (traction battery)

If your vehicle is disposed of without the hybrid battery having been removed, there is a danger of serious electric shock if high voltage parts, cables and their connectors are touched. In the event that your vehicle must be disposed of, the hybrid battery must be disposed of by your Lexus dealer or a qualified service shop. If the hybrid battery is not disposed of properly, it may cause electric shock that can result in death or serious injury.
Symbols used throughout this manual

Cautions & Notices

⚠️ CAUTION
This is a warning against something which, if ignored, may cause injury to people. You are informed about what you must or must not do in order to reduce the risk of injury to yourself and others.

⚠️ NOTICE
This is a warning against something which, if ignored, may cause damage to the vehicle or its equipment. You are informed about what you must or must not do in order to avoid or reduce the risk of damage to your Lexus and its equipment.

Symbols used in illustrations

Safety symbol
The symbol of a circle with a slash through it means “Do not”, “Do not do this”, or “Do not let this happen”.

Arrows indicating operations
- Indicates the action (pushing, turning, etc.) used to operate switches and other devices.
- Indicates the outcome of an operation (e.g. a lid opens).

1

29
Your vehicle is a hybrid vehicle. It has characteristics different from conventional vehicles. Be sure you are closely familiar with the characteristics of your vehicle, and operate with care.

The hybrid system combines the use of a gasoline engine and an electric motor (traction motor) according to driving conditions, improving fuel efficiency and reducing exhaust emissions.

1. Gasoline engine
2. Hybrid battery (traction battery)
3. Rear electric motor (Traction motor)*
4. Front electric motor (Traction motor)

*: AWD models only
When stopped/during start-off
The gasoline engine stops when the vehicle is stopped. During start-off, the electric motor (traction motor) drives the vehicle. At slow speeds or when traveling down a gentle slope, the engine is stopped and the motor is used.

During normal driving
The gasoline engine is predominantly used. The electric motor (traction motor) charges the hybrid battery as necessary.

When accelerating sharply
The power of the hybrid battery (traction battery) is added to that of the gasoline engine via the electric motor (traction motor).

When braking (regenerative braking)
The electric motor (traction motor) charges the hybrid battery (traction battery).

Charging the hybrid battery (traction battery)
As the gasoline engine charges the hybrid battery (traction battery), the battery does not need to be charged from an outside source. However, if the vehicle is left parked for a long time the hybrid battery will slowly discharge. For this reason, be sure to drive the vehicle at least once every few months for at least 30 minutes. If the hybrid battery becomes fully discharged and you are unable to jump-start the vehicle with the 12-volt battery, contact your Lexus dealer.

If the shift lever is in N, the hybrid battery (traction battery) will not be charged. Always put the shift lever in P when the vehicle is stopped. When driving in heavy traffic, operate the vehicle with the shift lever in D or S to avoid discharging the battery.
■ Regenerative braking

In the following situations, kinetic energy is converted to electric energy and deceleration force can be obtained in conjunction with the recharging of the hybrid battery (traction battery).

- The accelerator pedal is released.
- The brake pedal is depressed with the shift lever in D or S.

■ Conditions in which the gasoline engine may not stop

The gasoline engine starts and stops automatically. However, it may not stop automatically in the following conditions:

- During gasoline engine warm-up
- During hybrid battery (traction battery) charging
- When the temperature of the hybrid battery (traction battery) is high or low
- When the heater is switched on

■ Charging the 12-volt battery

→ P. 652

■ After the 12-volt battery has discharged or has been changed or removed

The gasoline engine may not stop even if the vehicle is running on the hybrid battery (traction battery). If this continues for a few days, contact your Lexus dealer.
■ Sounds and vibrations specific to a hybrid vehicle

There may be no engine sounds or vibration even though the vehicle is able to move. Always shift the shift lever to P when parked.

The following sounds or vibrations may occur when the hybrid system is operating, and are not a malfunction:

● Motor sounds may be heard from the engine compartment.
● Sounds may be heard from the hybrid battery (traction battery) under the rear seat when the hybrid system starts or stops.
● Sounds from the hybrid system may be heard when the back door is open.
● Sounds may be heard from the hybrid transmission when the engine is started or stopped, or while the engine is idling.
● Engine sounds may be heard when accelerating sharply.
● Sounds may be heard due to regenerative braking when the brake pedal is depressed and accelerator is loosen.
● Vibration may be felt when the gasoline engine starts or stops.
● Cooling fan sounds may be heard from the air intake vents under the rear seat.

■ Maintenance, repair, recycling, and disposal

Contact your Lexus dealer regarding maintenance, repair, recycling and disposal. Do not dispose of the vehicle yourself.
Take care when handling the hybrid system, as it contains a high voltage system (about 650V at maximum) as well as parts that become extremely hot when the hybrid system is operating. Obey the caution labels attached to the vehicle.

1. Air conditioning compressor
2. High voltage cables (orange)
3. Power control unit with DC/DC converter
4. Hybrid battery (traction battery)
5. Rear electric motor (traction motor)*
6. Service plug
7. Front electric motor (traction motor)

*: AWD models only
Hybrid battery air vents

There are air intake vents under the rear seats for the purpose of cooling the hybrid battery (traction battery). If the vents become blocked, it may become the cause of malfunctions such as the hybrid battery overheating, a reduction in battery output power etc.

Emergency shut off system

When the vehicle receives an impact due to an accident, the hybrid system automatically stops, blocking off the high voltage current. Also, the emergency shut off system cuts the fuel supply, minimizing the risk of fuel leakage. If this occurs, the hybrid system will not be able to be restarted, therefore contact your Lexus dealer.
Hybrid warning message

A message is automatically displayed when a malfunction occurs in the hybrid system or an improper operation is attempted.

If a warning message is shown on the multi-information display, read the message and follow the instructions. (→P. 608)

- If a warning light comes on or, a warning message is displayed
  The hybrid system may not start. In that case, try to start the system again. If the “READY” indicator does not come on, contact your Lexus dealer.

- When the 12-volt battery is reconnected
  →P. 529

- When refueling, the fuel filler door may take a few moments to open
  As part of emission system operation, it may take up to 10 seconds for the fuel filler door to automatically release after the opener switch is pressed. Before refueling is possible, a message will be shown on the multi-information display. (→P. 119, 620)

- Electromagnetic waves
  ● High voltage parts and cables on the hybrid vehicles incorporate electromagnetic shielding, and therefore emit approximately the same amount of electromagnetic waves as conventional gasoline powered vehicles or home electronic appliances.
  ● Your vehicle may cause sound interference in some third party-produced radio parts.
■ Running out of fuel

In order to start the hybrid system, fuel is required. Therefore the hybrid system cannot be started on electrical energy only.

When the vehicle has run out of fuel and the hybrid system cannot be started, refuel the vehicle with at least enough gasoline to make the low fuel level warning light (→P. 598) go off. If there is only a small amount of fuel, the hybrid system may not be able to start. (The minimum amount of fuel to add to make the low fuel level warning light go out is about 2.7 gal. [10.1 L, 2.2 Imp. gal.] when the vehicle is on a level surface. This value may vary when the vehicle is on a slope.)

■ Hybrid battery (traction battery)

The hybrid battery (traction battery) has a limited service life. The lifespan of the hybrid battery (traction battery) can change in accordance with driving style and driving conditions.

\[\begin{array}{|l|}
\hline
\textbf{CAUTION} \\
\hline
\textbf{High voltage and high temperature precautions} \\
The vehicle has high voltage DC and AC systems as well as a 12-volt system. DC and AC high voltage is very dangerous and can cause severe burns and electric shock that may result in death or serious injury. \\

- Never touch, disassemble, remove or replace the high voltage parts, cables and their connectors. \\
- The hybrid system will become hot after starting as the system uses high voltage. Be careful of both the high voltage and the high temperature, and always obey the caution labels attached to the vehicle.

- Never try to open the service plug access hole located under the rear seat. The service plug is used only when the vehicle is serviced and is subject to high voltage. \\
\end{array}\]
CAUTION

- **Road accident cautions**
  Observe the following precautions to reduce the risk of death or serious injury:
  - Pull your vehicle off the road, shift the shift lever to P, apply the parking brake, and turn the hybrid system off.
  - Do not touch the high voltage parts, cables and connectors.
  - If electric wires are exposed inside or outside your vehicle, an electric shock may occur. Never touch exposed electric wires.
  - If a fluid leak occurs, do not touch it as it may be strong alkaline electrolyte from the hybrid battery (traction battery). If it comes into contact with your skin or eyes, wash it off immediately with a large amount of water or, if possible, boric acid solution. Seek immediate medical attention.
  - If a fire occurs in the hybrid vehicle, leave the vehicle as soon as possible. Never use a fire extinguisher that is not meant for electric fires. Using even a small amount of water may be dangerous.
  - If your vehicle needs to be towed, do so with all front wheels (for 2WD models) or four wheels (for AWD models) raised. If the wheels connected to the electric motor (traction motor) are on the ground when towing, the motor may continue to generate electricity. This may cause an electricity leakage leading to a fire. (→P. 591)
  - Carefully inspect the ground under the vehicle. If you find that liquid has leaked onto the ground, the fuel system may have been damaged. Leave the vehicle as soon as possible.

- **Nickel-metal hydride battery**
  Your vehicle contains a sealed nickel-metal hydride battery. If disposed of improperly, it is hazardous to the environment and there is a risk of severe burns and electrical shock that may result in death or serious injury.

- **Hybrid battery collection**
  When disposing of your vehicle, always contact your Lexus dealer. Hybrid batteries are collected through Lexus dealers, as such we appreciate your cooperation.

- **Emergency shut off system**
  Carefully check to see if there are exposed high voltage parts or cables. Never touch the parts or cables. (→P. 34)
NOTICE

■ Hybrid battery air vents

● Do not put foreign objects over the air vents. The hybrid battery (traction battery) may overheat or lose power and be damaged.

● Clean the air vents regularly to prevent the hybrid battery (traction battery) from overheating.

● Do not wet or allow foreign substances to enter the air vents as this may cause a short circuit and damage the hybrid battery (traction battery).

● Do not carry large amounts of water such as an aquarium into the vehicle. If water spills onto the hybrid battery (traction battery), the battery may be damaged. Have the vehicle inspected by your Lexus dealer.
1-1. Hybrid system
Energy monitor/consumption screen

You can view the status of your hybrid system on the multi-information display and the navigation system screen.

1 Navigation system screen (if equipped)
2 Multi-information display

Remote Touch* (if equipped)
1 “MENU” button
2 Remote Touch knob
3 “ENTER” button

*: For use of the Remote Touch, refer to “Navigation System Owner’s Manual”.

Energy monitor

► Navigation system screen (if equipped)

Press the “MENU” button on the Remote Touch.
1-1. Hybrid system

Before driving

Select  on the screen and press the “ENTER” button on the Remote Touch.

Select  and press the “ENTER” button.

If the  or  screen is displayed, select  and press the “ENTER” button.

Multi-information display

Toggle the “ENTER” switch on the steering wheel upward or downward through several items to select the energy monitor display.
<table>

</tbody>
</table>

These images are examples only, and may vary slightly from actual conditions.
Consumption (vehicles with a navigation system)

**STEP 1** Press the “MENU” button on the “Remote Touch” and select app.

**STEP 2** Select app and press the “ENTER” button.

If the screen does not appear, select app and press the “ENTER” button.

1. Fuel consumption in the past 30 minutes
2. Regenerated energy in the past 30 minutes
   One symbol indicates 50 Wh. Up to 4 symbols are shown.
3. Cruising range

The image is example only, and may vary slightly from actual conditions.
■ Past record (vehicles with a navigation system)

STEP 1 Press the “MENU” button on the “Remote Touch” and select

![Info. Phone]

STEP 2 Select

![Fuel Consumption]

and push the “ENTER” button.

If the Past Record screen does not appear, select Past Record and press the “ENTER” button.

1 Best past fuel consumption
2 Average fuel consumption

Displays a maximum of five past record of the total average fuel consumption on the multi-information display.

The image is example only, and may vary slightly from actual conditions.

■ Resetting the consumption data

Selecting Clear on the Consumption screen will reset the fuel consumption and the regenerated energy for the past 30 minutes. Selecting Clear on the Past Record screen will reset the past records and best past fuel consumption. Selecting Yes on the following screen will confirm resetting of all the data.
For economical and ecological driving, pay attention to the following points:

■ Use of Hybrid System Indicator
   More Eco-friendly driving is possible by keeping the indicate of Hybrid System Indicator within Eco area.

■ When braking the vehicle
   Make sure to operate the brakes gently and in good time. A greater amount of electrical energy can be retained when slowing down.

■ Delays
   Repeated acceleration and deceleration, as well as long waits at traffic lights, will lead to bad fuel consumption. Check traffic reports before leaving and avoid delays as much as possible. When encountering a delay, gently release the brake pedal to allow the vehicle to move forward slightly while avoiding overuse of the accelerator pedal. Doing so can help control excessive gasoline consumption.

■ Highway driving
   Control your speed and keep at a constant speed. Also, before stopping at a toll booth or similar, allow plenty of time to release the accelerator and gently apply the brakes. A greater amount of electrical energy can be retained when slowing down.

■ Air conditioning
   Use the air conditioning only when necessary. Doing so can help control excessive gasoline consumption.
   In summer: In high temperatures, use the recirculated air mode. Doing so will help to reduce the burden on the air conditioning and reduce fuel consumption as well.
   In winter: Because the gasoline engine will not automatically cut out until the gasoline engine and the interior of the vehicle are warm, it will consume fuel. Also, fuel consumption can be improved by avoiding overuse of the heater.
■ Checking tire inflation pressure
Make sure to check the tire inflation pressure frequently. (→P. 673) Improper tire inflation pressure can cause poor fuel consumption. Also, as snow tires can cause large amounts of friction, their use on dry roads can lead to poor fuel consumption. Use a tire that is appropriate for the season.

■ Luggage
Carrying heavy luggage can lead to poor fuel consumption. Avoid carrying unnecessary luggage. Installing a large roof rack can also cause poor fuel consumption.

■ Warming up before driving
Since the gasoline engine starts up and cuts out automatically when cold, warming up the engine is unnecessary. Moreover, frequently driving short distances will cause the engine to repeatedly warm up, which can lead to poor fuel consumption.
The following keys are provided with the vehicle.

**1 Electronic keys**
- Operating the smart access system with push-button start (→P. 52)
- Operating the wireless remote control function (→P. 64)

**2 Mechanical keys**

**3 Key number plate**

**4 Card key (electronic key) (if equipped)**
- Operating the smart access system with push-button start (→P. 52)
# Using the mechanical key

To take out the mechanical key:

**Electronic keys:** Slide the release lever and take the key out.

**Card key:** Press the lock release button and take the key out.

If the key cannot be inserted in a lock cylinder, turn it over and re-attempt to insert it. Mechanical keys with grooves on one side can be inserted in one direction only.

After using the mechanical key, store it in the electronic key. Carry the mechanical key together with the electronic key. If the electronic key battery is depleted or the entry function does not operate properly, you will need the mechanical key. (→P. 647)

## Card key

- The mechanical key that is stored inside the card key should be used only if a problem arises, such as when the key does not operate properly.

- If it is difficult to take out the mechanical key, press down the lock release button using a pen tip etc. If it is still difficult to pull it out, use a coin etc.

- To store the mechanical key in the card key, insert it while pressing the lock release button.
Before driving

● The card key is not waterproof.

■ When required to leave the vehicle’s key with a parking attendant

Lock the glove box as circumstances demand. (→P. 449)
Remove the mechanical key for your own use and provide the attendant with the electronic key only.

■ Key number plate

Keep the plate in a safe place such as your wallet, not in the vehicle. In the event that a mechanical key is lost, a new key can be made at your Lexus dealer using the key number plate. (→P. 646)

■ When riding in an aircraft

When bringing an electronic key onto an aircraft, make sure you do not press any buttons on the electronic key while inside the aircraft cabin. If you are carrying an electronic key in your bag etc., ensure that the buttons are not likely to be pressed accidentally. Pressing a button may cause the electronic key to emit radio waves that could interfere with the operation of the aircraft.

○ If the battery cover is not installed and the battery falls out or if the battery was removed because the key got wet, reinstall the battery with the positive terminal facing the Lexus emblem.
### NOTICE

#### To prevent key damage

Observe the following:

- Do not drop the keys, subject them to strong shocks or bend them.
- Do not expose the keys to high temperatures for a long period of time.
- Do not get the keys wet or wash them in an ultrasonic washer etc.
- Do not attach metallic or magnetic materials to the keys or place the keys close to such materials.
- Do not disassemble the keys.
- Do not attach a sticker or anything else to the surface of the electronic key.
- Do not place the keys near objects that produce magnetic fields, such as TVs, audio systems, glass top ranges, or medical electrical equipment, such as low-frequency therapy equipment.

#### Carrying the electronic key on your person

Carry the electronic key 3.9 in. (10 cm) or more away from electric appliances that are turned on. Radio waves emitted from electric appliances within 3.9 in. (10 cm) of the electronic key may interfere with the key, causing the key to not function properly.

#### In case of a smart access system with push-button start malfunction or other key-related problems

Take your vehicle with all the electronic keys provided with your vehicle, including the card key, to your Lexus dealer.

#### When a vehicle key is lost

If the key remains lost, the risk of vehicle theft increases significantly. Visit your Lexus dealer immediately with all remaining electronic keys and the card key that was provided with your vehicle.
1-2. Key information

NOTICE

Precautions for handling the card key

- Do not apply excess force when inserting the mechanical key into the card key. Doing so may damage the card key.

- If the battery or card key terminals get wet, the battery may corrode and the card key may stop working. If the key is dropped into water, or if drinking water etc. is spilled on the key, immediately remove the battery cover and wipe the battery and terminals. (To remove the battery cover, lightly grasp and pull it.) If the battery is corroded, have your Lexus dealer replace the battery.

- Do not crush the battery cover or use a screwdriver to remove the battery cover. Forcibly removing the battery cover may bend or damage the key.

- If the battery cover is frequently removed, the battery cover may become loose.

- When installing the battery, make sure to check the direction of the battery. Installing the battery in the wrong direction may cause the battery to deplete rapidly.

- The surface of the card key may be damaged, or its coating may peel off in the following situations:
  - The card key is carried together with hard objects, such as coins and keys.
  - The card key is scraped with a sharp object, such as the tip of a mechanical pencil.
  - The surface of the card key is wiped with thinner or benzene.
1-3. Opening, closing and locking the doors
Smart access system with push-button start

By simply carrying the electronic key or card key on your person, for example in your pocket, the following operations can be performed without using a key. The driver should always carry the electronic key.

1. Locks and unlocks the side doors (→P. 53)
2. Locks and unlocks the back door (→P. 53)
3. Starts the hybrid system (→P. 176)
Unlocking and locking the side doors (front door handles only)

Grip the handle to unlock the door.

- Make sure to touch the sensor on the back of the handle.
- The doors cannot be unlocked for 3 seconds after the doors are locked.

Touch the lock sensor (the indentation on the upper part of the door handle) to lock the doors.

If locking/unlocking cannot be performed correctly, use the wireless remote control or mechanical key to perform the operations. (→P. 64, 647)

Unlocking and locking the back door

Press the button to unlock the door.

- The door cannot be unlocked for 3 seconds after the door is locked.
1-3. Opening, closing and locking the doors

Press the button to lock the door.

If locking/unlocking cannot be performed correctly, use the wireless remote control to perform the operations. (→P. 64)

Effective range (areas within which the electronic key is detected)

- **When locking or unlocking the doors**
  The system can be operated when the electronic key is within about 2.3 ft. (0.7 m) of an outside door handle. (Only the doors detecting the key can be operated.)

- **When starting the hybrid system or changing “POWER” switch modes (→P.177)**
  The system can be operated when the electronic key is inside the vehicle.
### Operation signals

A buzzer sounds and the emergency flashers flash to indicate that the doors have been locked/unlocked. (Locked: Once; Unlocked: Twice)

### When the door cannot be locked by the lock sensor on the upper part of the door handle

Touch both lock sensors on the upper and lower part of the door handle simultaneously.
1-3. Opening, closing and locking the doors

■ Alarms and warning indicators

A combination of exterior and interior alarms as well as warning messages shown on the multi-information display is used to prevent theft of the vehicle and accidents resulting from erroneous operation. Take appropriate measures in response to any warning message on the multi-information display. (→P. 608)

The following table describes circumstances and correction procedures when only alarms are sounded.

<table>
<thead>
<tr>
<th>Alarm</th>
<th>Situation</th>
<th>Correction procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Exterior alarm sounds once for 10 seconds.</td>
<td>An attempt was made to lock the vehicle while a door was open.</td>
<td>Close all of the doors and lock the doors again.</td>
</tr>
<tr>
<td>Interior alarm pings repeatedly</td>
<td>The “POWER” switch was turned to ACCESSORY mode while the driver’s door is open. (The driver’s door was opened when the “POWER” switch is in ACCESSORY mode.)*</td>
<td>Close the driver’s door.</td>
</tr>
<tr>
<td></td>
<td>The “POWER” switch was turned off while the driver’s door is open.*</td>
<td>Close the driver’s door.</td>
</tr>
</tbody>
</table>

*: For “POWER” switch mode explanations: →P. 177

■ If the smart access system with push-button start does not operate properly

The reception conditions may be poor or the battery may have depleted.

● Steps to take in an emergency: →P. 647

● Changing the electronic key battery: →P. 550
1-3. Opening, closing and locking the doors

Conditions affecting operation

The smart access system with push-button start uses weak radio waves. In the following situations, the communication between the electronic key and the vehicle may be affected, preventing the smart access system with push-button start, wireless remote control and immobilizer system from operating properly. (Ways of coping: → P. 647)

- When the electronic key battery is depleted
- When the vehicle is stopped near a TV tower, electric power plant, gas station, radio station, large display, airport or a similar facility that generates strong radio waves or electrical noise.
- When carrying a portable radio, cellular phone, cordless phone or other wireless communication devices
- When the electronic key is in contact with, or is covered by the following metallic objects
  - Cards to which aluminum foil is attached
  - Cigarette boxes that have aluminum foil inside
  - Metallic wallets or bags
  - Coins
  - Hand warmers made of metal
  - Media such as CDs and DVDs
- When multiple electronic keys are in the vicinity
- When another wireless key (that emits radio waves) is being used nearby
- When carrying the electronic key together with the following devices that emit radio waves
  - Another vehicle’s electronic key or a wireless key that emits radio waves
  - Personal computers or personal digital assistants (PDAs)
  - Digital audio players
  - Portable game systems
- If window tint with a metallic content or metallic objects are attached to the rear window
1-3. Opening, closing and locking the doors

■ Electronic key battery depletion

○ The standard battery life is 1 to 2 years. (The card key battery life is about a year and a half.)

○ If the battery becomes low, an alarm will sound in the cabin when the hybrid system stops. (→P. 620)

○ As the electronic key always receives radio waves, the battery will become depleted even if the electronic key is not used. The following symptoms indicate that the electronic key battery may be depleted. Replace the battery when necessary. (→P. 550)
  • The smart access system with push-button start or the wireless remote control does not operate.
  • The detection area becomes smaller.
  • The LED indicator on the key surface does not turn on.

○ To avoid serious deterioration, do not leave the electronic key within 3 ft. (1 m) of the following electrical appliances that produce a magnetic field:
  • TVs
  • Personal computers
  • Cellular phones, cordless phones and battery chargers
  • Recharging cellular phones or cordless phones
  • Glass top ranges
  • Table lamps

■ Security feature

If a door is not opened within approximately 60 seconds after the vehicle is unlocked, the security feature automatically locks the vehicle again.
Battery-saving function

If the vehicle is parked for a long period of time, the battery-saving function is activated in order to prevent the vehicle 12-volt battery from being discharged and the electronic key battery from being depleted.

- In the following circumstances, unlocking the vehicle using the entry function may take longer than usual:
  - When the entry function has not been used for 5 days or more
  - When the electronic key has been left within approximately 6 ft. (2 m) of the vehicle for 10 minutes or more
- If the entry function has not been used for 14 days or more, the vehicle cannot be unlocked by a door other than the driver’s door. To unlock the vehicle, grip the driver’s door handle or use the wireless remote control or the mechanical key.

The system will resume operation when:

- The vehicle is locked using the lock sensor.
- The vehicle is locked/unlocked using the wireless remote control function. (→P. 64)
- The vehicle is locked/unlocked using the mechanical key. (→P. 647)

Points to remember regarding electronic key detection

- If there is a problem with the manner by which the electronic key is held or is placed as outlined below, the electronic key may not be detected and therefore may not be able to be operated despite being in the effective range. Also, the alarm may be triggered accidentally or the door lock prevention function may not operate.
  - Outside the vehicle: When the doors are locked/unlocked with the electronic key too close to the door window, door handle or rear bumper, or with the electronic key too close to the ground or in a high location.
  - Inside the vehicle: When the electronic key is placed on top of the instrument panel, on the floor, in a door pocket, inside the glove box etc.
Do not leave the electronic key on top of the instrument panel or near the door pockets when exiting the vehicle. Depending on the radio wave reception conditions, it may be detected by the antenna outside the cabin and the door will become lockable from the outside, possibly trapping the electronic key inside the vehicle.

As long as the electronic key is within the effective range, the doors may be locked or unlocked by anyone. However, only the doors detecting the electronic key can be used to unlock the vehicle.

The doors may lock or unlock if the electronic key is within the effective range and a large amount of water splashes on the door handle, such as in the rain or in a car wash. The doors will automatically be locked after approximately 60 seconds if a door is not opened and closed.

If the key is too close to the vehicle when the button on the wireless remote control is used for locking and then unlocking is attempted, the smart access system with push-button start may not operate. If this occurs, perform unlocking by pressing the button on the wireless remote control.

Notes for locking the doors

Touching the door lock sensor while wearing gloves may delay or prevent lock operation. Remove the gloves and touch the lock sensor again.

When the lock operation is performed using the lock sensor, recognition signals will be shown up to two consecutive times. After this, no recognition signals will be given.

If the door handle becomes wet while the electronic key is within the effective range, the door may lock and unlock repeatedly. Place the key in a position 6 ft. (2 m) or more separate from the vehicle while the vehicle is being washed. (Take care to ensure that the key is not stolen.)

If the electronic key is inside the vehicle and a door handle becomes wet during a car wash, a message may be shown on the multi-information display and a buzzer will sound outside the vehicle. To turn off the alarm, lock all the doors.

If ice, snow, mud, etc. is attached to the surface of the lock sensor, the sensor may not work. If this occurs, operate the sensor again after the ice, snow, mud, etc. has been cleaned off.

Fingernails may scrape against the door during operation of the door handle. Be careful not to injure fingernails or damage the surface of the door.
■ Notes for the unlocking function
  ● Gripping the door handle when wearing a glove may not unlock the door.
  ● A sudden approach to the effective range or door handle may prevent the doors from being unlocked. In this case, return the door handle to the original position and check that the doors unlock before pulling the door handle again.
  ● If there is another electronic key in the detection area, it may take slightly longer to unlock the doors after the door handle is gripped.

■ When the vehicle is not driven for extended periods
  ● To prevent theft of the vehicle, do not leave the electronic key within 6 ft. (2 m) of the vehicle.
  ● The smart access system with push-button start can be deactivated in advance. (→P. 693)

■ Customization
  Settings (e.g. smart access system with push-button start) can be changed. (Customizable features →P. 693)

■ Certification for the smart access system with push-button start
  This system meets the certification requirements of Radio Low.
  ▶ For vehicles sold in Hawaii, Guam, Saipan and Puerto Rico

FCC WARNING:
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

For vehicles sold in Canada

NOTE:
Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.
1-3. Opening, closing and locking the doors

CAUTION

Caution regarding interference with electronic devices

- People with implanted pacemakers or cardiac defibrillators should keep away from the antenna inside the cabin (1) and antenna outside the cabin (2). The radio waves may affect the operation of such devices. If necessary, the entry function can be disabled. Ask your Lexus dealer for details, such as the frequency of radio waves and timing of emitting the radio waves. Then, consult your doctor to see if you should disable the entry function.

- User of any electrical medical device other than implanted pacemakers and implanted cardiac defibrillators should consult the manufacturer of the device for information about its operation under the influence of radio waves. Radio waves could have unexpected effects on the operation of such medical devices.

Ask your Lexus dealer for disabling the entry function.
1-3. Opening, closing and locking the doors

Wireless remote control

The wireless remote control can be used to lock and unlock the vehicle. It also opens and closes the back door.

► Vehicles without a power back door

1. Locks all the doors
2. Unlocks all the doors
   Pressing the button unlocks the driver’s door. Pressing the button again within 3 seconds unlocks the other doors.
3. Opens the windows and moon roof (press and hold)
4. Sounds the alarm (press and hold) (→P.126)

► Vehicles with a power back door

1. Locks all the doors
2. Unlocks all the doors
   Pressing the button unlocks the driver’s door. Pressing the button again within 3 seconds unlocks the other doors.
3. Opens the windows and moon roof (press and hold)
4. Opens and closes the back door (press and hold)
5. Sounds the alarm (press and hold) (→P.126)
1-3. Opening, closing and locking the doors

■ Operation signals
Side doors: A buzzer sounds and the emergency flashers flash to indicate that the doors have been locked/unlocked. (Locked: Once; Unlocked: Twice)
Back door: A buzzer sounds and the emergency flashers flash twice to indicate that the back door is opening/closing.
Windows and moon roof: A buzzer sounds to indicate that the windows and moon roof are opening.

■ Door lock buzzer
If an attempt to lock the doors is made when a door is not fully closed, a buzzer sounds continuously. Fully close the door to stop the buzzer, and lock the vehicle once more.

■ Security feature
→P. 58

■ Panic mode
When \( \text{[蜂]} \) is pressed for longer than about one second, an alarm will sound intermittently and the vehicle lights will flash to deter any person from trying to break into or damage your vehicle.
To stop the alarm, press any button on the electronic key.

■ Back door operation
The back door can be opened even if it is locked. Lock the back door again when you leave the vehicle. The back door will not lock automatically after it has been opened and then closed.

■ Alarm
Using the wireless remote control to lock the doors will set the alarm system. (→P. 126)

■ Reversing the operation of the power back door
Pressing the wireless remote control switch again while the power back door is operating will cause the operation to reverse.
1-3. Opening, closing and locking the doors

- **Conditions affecting operation**
  → P. 57

- **If the wireless remote control does not operate properly**
  Locking and unlocking the doors: Use the mechanical key. (→ P. 647)

- **Electronic key battery depletion**
  → P. 58

- **When the electronic key battery is fully depleted**
  → P. 550

- **Customization**
  Settings (e.g. door unlocking function) can be changed. (Customizable features → P. 693)
1-3. Opening, closing and locking the doors

Side doors

The vehicle can be locked and unlocked using the entry function, wireless remote control or door lock switches.

- **Entry function**
  → P. 53

- **Wireless remote control**
  → P. 64

- **Door lock switches**

  1. Locks all the doors
  2. Unlocks all the doors

- **Inside lock buttons**

  1. Locks the door
  2. Unlocks the door

The front doors can be opened by pulling the inside handle even if the lock buttons are in the lock position.
Locking the front doors from the outside without a key

**STEP 1** Move the inside lock button to the lock position.
**STEP 2** Close the door.

The door cannot be locked if the “POWER” switch is in ACCESSORY or ON mode, or the electronic key is left inside the vehicle.

The key may not be detected correctly and the door may be locked.

Rear door child-protector lock

The door cannot be opened from inside the vehicle when the lock is set.

These locks can be set to prevent children from opening the rear doors. Push down on each rear door switch to lock both rear doors.

- **Impact detection door lock release system**
  In the event that the vehicle is subject to a strong impact, all the doors are unlocked. Depending on the force of the impact or the type of accident, however, the system may not operate.

- **Using the mechanical key**
  The doors can also be locked and unlocked with the mechanical key. (→P. 647)

- **If a wrong key is used**
  The key cylinder rotates freely to protect the inside mechanism.

- **Customization**
  Settings (e.g. unlocking function using a key) can be changed. (Customizable features →P. 693)
Before driving

CAUTION

■ To prevent an accident

Observe the following precautions while driving the vehicle. Failure to do so may result in a door opening and an occupant falling out, resulting in death or serious injury.

- Always use a seat belt.
- Always lock all the doors.
- Ensure that all the doors are properly closed.
- Do not pull the inside handle of the doors while driving. The doors may be opened and the passengers are thrown out of the vehicle and it may result in serious injury or death.

Be especially careful with the front doors, as the doors may be opened even if the inside lock buttons are in the locked position.

- Set the rear door child-protector locks when children are seated in the rear seats.

■ When opening or closing a door

Check the surroundings of the vehicle such as whether the vehicle is on an incline, whether there is enough space for a door to open and whether a strong wind is blowing. When opening or closing the door, hold the door handle tightly to prepare for any unpredictable movement.
1-3. Opening, closing and locking the doors

Back door

The back door can be locked/unlocked and opened/closed by the following procedures:

- **Locking and unlocking the back door**
  - Door lock switches
    → P. 67
  - Entry function
    → P. 53
  - Wireless remote control
    → P. 64

- **Opening the back door from outside the vehicle**

  Raise the back door while pushing up the back door opener button.
- Opening the back door from outside the vehicle (vehicles with a power back door)
  - Using the back door opener button*
    When the back door is unlocked: Press the back door opener button.
    When the back door is locked: While carrying the electronic key on your person, press and hold the back door opener button or press it twice.
    *: This setting must be customized at your Lexus dealer.
  - Using the wireless remote control
    → P. 64

- Opening the back door from inside the vehicle (vehicles with a power back door)
  Press the switch to open/close.
  Pressing the switch again while the power back door is operating will cause the operation to reverse.
1-3. Opening, closing and locking the doors

**Power back door switch (vehicles with a power back door)**

Press the switch to close the back door.

Pressing the switch again while the power back door is closing will cause it to open again.

**Canceling the power back door system (vehicles with a power back door)**

Turn off the main switch in the glove box to disable the power back door system.

1. **On**
2. **Off**

The back door cannot be operated even with the wireless remote control or power back door switch.
■ The power back door can be operated when

● The back door is unlocked. (Except for using the back door opener button* or wireless remote control, when the power back door can be operated even if it is locked.)

● The power back door main switch is on.

● To open the power back door when the “POWER” switch is in ON mode, the power back door main switch must be on, the vehicle speed must be lower than 1 mph (3 km/h) and the shift lever must be in P. (When using the back door opener button only)

● The “POWER” switch is turned off. (When using the wireless remote control only)

*: This setting must be customized at your Lexus dealer.

■ Back door handle

Use the back door handle when lowering the back door.
Do not close the back door fully while still holding the door handle as an injury may result.

■ Luggage compartment lights

The luggage compartment lights turn on when the back door is opened with the luggage compartment light switch on.
1-3. Opening, closing and locking the doors

■ Back door closer (vehicles with a power back door)
   In the event that the back door is left slightly open, the back door closer will automatically close it to the fully closed position.
   ● The back door closer will operate regardless of “POWER” switch mode.
   ● The back door can be opened while the back door closer is operating by pressing the back door opener button.

■ Power back door operation
   ● A buzzer sounds and the emergency flashers flash twice to indicate that the back door is opening/closing.
   ● The back door can still be opened and closed manually, even when the power back door main switch is off.
   ● Pressing the back door opener button while the power back door system is operating will cause the back door to switch to manual operation.
   ● If anything obstructs the power back door while it is closing/opening, a buzzer will sound and the back door will automatically operate in the opposite direction.
   ● If two or more successive attempts are made to close the back door, a buzzer will sound and the back door will switch to manual operation.

■ Jam protection function (vehicles with a power back door)

Sensors are attached to the left and right sides of the power back door. If these sensors detect an obstruction while the power back door is closing, the jam protection function will return the door to the fully open position.

■ After the back door has been opened and then closed
   Lock the back door as the back door will not lock automatically.

■ Luggage mode (vehicles with electronically modulated air suspension)
   Pressing the vehicle height selector switch to lower the vehicle height makes loading luggage easier. (→ P. 265)
If the back door opener is inoperative

The back door can be opened from the inside.

STEP 1

Remove the cover.

STEP 2

Move the lever.

- Vehicles with a power back door

- Vehicles without a power back door

When reconnecting the 12-volt battery or changing a fuse while the back door is open:

To enable the power back door to operate properly, initialize the system by completely closing the back door manually. If the 12-volt battery is reconnected or a fuse is changed while the back door is closed, initializing the system is not necessary.
## Caution

### Caution while driving

- Keep the back door closed while driving.
  If the back door is left open, it may hit nearby objects while driving or luggage may be unexpectedly thrown out, causing an accident.
  In addition, exhaust gases may enter the vehicle, causing death or a serious health hazard. Make sure to close the back door before driving.
- Before driving the vehicle, make sure that the back door is fully closed. If the back door is not fully closed, it may open unexpectedly while driving, causing an accident.
- Never let anyone sit in the luggage compartment. In the event of sudden braking or a collision, they are susceptible to death or serious injury.

### When children are in the vehicle

Observe the following precautions.
Failure to do so may result in death or serious injury.

- Do not leave children alone in the luggage compartment.
  If a child is accidentally locked in the luggage compartment, they could have heat exhaustion.
- Do not allow a child to open or close the back door.
  Doing so may cause the back door to move unexpectedly, or cause the child’s hands, head, or neck to be caught by the closing back door, which may result in death or serious injury of the child.

### Operating the back door

Observe the following precautions.
Failure to do so may cause parts of the body to be caught, resulting in death or serious injury.

- Remove any heavy loads, such as snow and ice, from the back door before opening it. Failure to do so may cause the back door to fall closed again after it is opened.
- When opening or closing the back door, thoroughly check to make sure the surrounding area is safe.
- If anyone is in the vicinity, make sure they are safe and let them know that the back door is about to open or close.
Use caution when opening or closing the back door in windy weather as it may move abruptly in strong wind.

The back door may fall if it is not opened fully. It is more difficult to open or close the back door on an incline than on a level surface, so beware of the back door unexpectedly opening or closing by itself. Make sure that the back door is fully open and secure before using the luggage compartment.

When closing the back door, take extra care to prevent your fingers etc. from being caught.

When closing the back door, make sure to press it lightly on its outer surface. If the back door handle is used to fully close the back door, it may result in hands or arms being caught.

Do not pull on the back door damper stay to close the back door, and do not hang on the back door damper stay. Doing so may cause hands to be caught or the back door damper stay to break, causing an accident.

If a bicycle carrier or similar heavy object is attached to the back door, it may fall closed again after being opened, causing someone’s hands, head or neck to be caught and injured. When installing an accessory part to the back door, using a genuine Lexus part is recommended.
## CAUTION

### Back door closer

- In the event that the back door is left slightly open, the back door closer will automatically close it to the fully closed position. It takes several seconds before the back door closer begins to operate. Be careful not to catch fingers or anything else in the back door, as this may cause bone fractures or other serious injuries.

- Use caution when using the back door closer as it still operates when the power back door system is cancelled.

### Power back door

Observe the following precautions when operating the power back door. Failure to do so may cause death or serious injury.

- Check the safety of the surrounding area to make sure there are no obstacles or anything that could cause any of your belongings to get caught.

- If anyone is in the vicinity, make sure they are safe and let them know that the back door is about to open or close.

- If the power back door system is turned off with the main switch while the back door is operating automatically, the automatic operation is stopped. The back door then has to be operated manually. Take extra care when on an incline, as the back door may open or close unexpectedly.

- If the operating conditions of the power back door are no longer met, a buzzer may sound and the back door may stop opening or closing. The back door then has to be operated manually. Take extra care when on an incline, as the back door may open or close abruptly.

- If the power back door main switch is turned off while the power back door is operating, the back door will change to manual operation. In this case, be careful as the back door may move suddenly.

- On an incline, the back door may fall after it opens. Make sure the back door is fully open and secure.
Before driving

CAUTION

- In the following situations, the power back door may detect an abnormality and automatic operation may be stopped. In this case, the back door has to be operated manually. Take extra care when on an incline, as the back door may open or close abruptly.
  - When the back door contacts an obstacle
  - When the 12-volt battery voltage suddenly drops, such as when the “POWER” switch is turned to ON mode or the hybrid system is started during automatic operation
- If a bicycle carrier or similar heavy object is attached to the back door, the power back door may not operate, causing itself to malfunction, or the back door may fall closed again after being opened, causing someone’s hands, head or neck to be caught and injured. When installing an accessory part to the back door, using a genuine Lexus part is recommended.

Jam protection function

Observe the following precautions. Failure to do so may cause death or serious injury.
- Be careful while the jam protection function is operating. Being hit by the back door may result in an injury.
- Although the back door stops closing when the jam protection function detects an object, take extra care as you may still be injured if part of your body is already caught.
- If anything obstructs the power back door while it is closing, the jam protection function will cause the back door to automatically operate in the opposite direction. However, be careful not to jam body parts in the doorframe, as an injury may result.
- Never use any part of your body to intentionally activate the jam protection function.
- The jam protection function may not work if something gets caught just before the back door fully closes. Be careful not to catch fingers or anything else.
1-3. Opening, closing and locking the doors

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
</table>
| ● The jam protection function may not work depending on the shape of the object that is caught. Be careful not to catch fingers or anything else.  
● The sensors located on the right and left sides of the power back door detect obstructions and prevent them from becoming jammed in the door. Some objects may not be detected depending on their shape or how they are jammed. Be careful not to get fingers or other body parts caught in the back door while it is operating as this may result in a serious injury. |

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
</table>
| ■ Back door damper stays  
The back door is equipped with damper stays that hold the back door in place. Observe the following precautions. Failure to do so may cause damage to the back door damper stay, resulting in malfunction. |
| ● Do not attach any foreign objects, such as stickers, plastic sheets, or adhesives to the damper stay rod.  
● Do not touch the damper stay rod with gloves or other fabric items.  
● Do not attach any accessories other than genuine Lexus parts to the back door.  
● Do not place your hand on the damper stay or apply lateral forces to it. |
| ■ To prevent back door closer malfunction  
● Do not apply excessive force to the back door while the back door closer is operating.  
● If the back door is opened and closed repeatedly in a short amount of time, the back door closer may stop operating. In this case, manually open the back door once and wait for a while before attempting to close it again. |
Before driving

NOTICE

To prevent damage to the power back door

- Make sure that there is no ice between the back door and frame that would prevent movement of the back door. Operating the power back door when excessive load is present on the back door may cause a malfunction.

- Do not apply excessive force to the back door while the power back door is operating.

- Take care not to damage the sensors (installed on the right and left edges of the power back door) with a knife or other sharp object. If the sensor is disconnected, the power back door will not operate in automatic operation.

- When manually closing the back door immediately after the power back door has been automatically opened fully, some resistance may be felt.
1-4. Adjustable components (seats, mirrors, steering wheel)
Front seats

1. Seat position adjustment switch
2. Seatback angle adjustment switch
3. Seat cushion (front) angle adjustment switch
4. Vertical height adjustment switch
5. Lumbar support adjustment switch
6. Seat cushion length adjustment switch (if equipped)
Flattening the front seatbacks

Before flattening the front seatbacks

Slide the rear seats as far back as possible. (→P. 86)

Flattening the front seatbacks

Move the front seat forward, raise the seat, and remove the head restraint. (→P. 95)

After returning the seat to its original position, make sure to replace the head restraint.

Move the seatback angle adjustment switch backward to flatten the seatback.
Active head restraints

When the occupant’s lower back presses against the seatback during a rear-end collision, the head restraint moves slightly forward and upward to help reduce the risk of whiplash to the seat occupant.

Active head restraints

Even small forces applied to the seatback may cause the head restraint to move. Pushing up a locked head restraint forcibly may appear the head restraint inner structure. These do not indicate problems.
1-4. Adjustable components (seats, mirrors, steering wheel)

CAUTION

- **Seat adjustment**
  - To reduce the risk of sliding under the lap belt during a collision, do not recline the seat more than necessary.
  - If the seat is too reclined, the lap belt may slide past the hips and apply restraint forces directly to the abdomen, or your neck may contact the shoulder belt, increasing the risk of death or serious injury in the event of an accident.
  - Adjustments should not be made while driving as the seat may unexpectedly move and cause the driver to lose control of the vehicle.

- **While driving**
  - Do not allow passengers to ride on the flattened seat.
1-4. Adjustable components (seats, mirrors, steering wheel)

Rear seats

Folding down the rear seatbacks

Before folding down the rear seatbacks
Stow all the head restraints and the rear center seat belt buckle.
1. Stow the seat belts inside the rear seat side pockets.
   When not in use, the seat belts should be stored inside the rear seat side pockets at all times.

2. **Folding down the rear seatbacks**
   - **From inside**
     - Pull the seatback angle adjustment lever.
     - To return the rear seatbacks to their original positions, lift them up until they lock.

   - **From outside**
     - Pull the levers.
     - **Left side lever:** Folds down the left side rear seat
     - **Right side lever:** Folds down the right side and center rear seats
     - To return the rear seatbacks to their original positions, lift them up until they lock.
Folding down the rear center seatback

Pull the center seatback lever behind the seatback and fold the seatback down.

To return the rear center seatback to its original position, lift it up until it locks.

CAUTION

When folding the rear seatbacks down

Observe the following precautions. Failure to do so may result in death or serious injury.

- Do not fold the seatbacks down while driving.
- Do not fold seatbacks down while passengers are seated or luggage is placed on the seats.
- Stop the vehicle on level ground, set the parking brake and shift the shift lever to P.
- After folding the seatback, lightly move the seat back and forth to lock it in place.
- Do not allow anyone to sit on a folded seatback or in the luggage compartment while driving.
- Do not allow children to enter the luggage compartment.

Seat adjustment

- To reduce the risk of sliding under the lap belt during a collision, do not recline the seat more than necessary.
  If the seat is too reclined, the lap belt may slide past the hips and apply restraint forces directly to the abdomen, or your neck may contact the shoulder belt, increasing the risk of death or serious injury in the event of an accident.
- Adjustments should not be made while driving as the seat may unexpectedly move and cause the driver to lose control of the vehicle.
### CAUTION

- **After returning the rear seatback to the upright position**
  
  Observe the following precautions. Failure to do so may result in death or serious injury.
  
  - Make sure the seatback is securely locked by pushing it forward and rearward on the top.
  - Check that the seat belts are not twisted or caught in the seatback.

### NOTICE

- **Stowing the center seat belt buckle**

  Before folding down the rear seatbacks, stow the center seat belt buckle to prevent it from becoming caught in the seatbacks.
1-4. Adjustable components (seats, mirrors, steering wheel)

Driving position memory*

Your preferred driving position (the position of the driver’s seat, steering wheel and outside rear view mirrors) can be memorized and recalled with the touch of a button. It is also possible to set this function to activate automatically when the doors are unlocked.

Three different driving positions can be entered into memory.

■ Entering a position to memory

**STEP 1** Turn the “POWER” switch to ON mode.
**STEP 2** Adjust the driver’s seat, steering wheel and outside rear view mirrors to the desired positions.

**STEP 3** Press the “SET” button, then within 3 seconds press button “1”, “2” or “3” until the signal beeps.

If the selected button has already been preset, the previously recorded position will be overwritten.

■ Recalling the memorized position

**STEP 1** Check that the shift lever is set in P.
**STEP 2** Turn the “POWER” switch to ON mode.

**STEP 3** Press button “1”, “2” or “3” until the signal beeps to recall the desired position.

*: If equipped
Linking driving position memory with door unlock operation

Record your driving position to button “1”, “2” or “3” before performing the following:

Carry only the key (including the card key) to which you want to link the driving position. If 2 or more keys are in the vehicle, the driving position cannot be linked properly.

**STEP 1** Shift the shift lever to P and close the driver’s door. Turn the “POWER” switch to ON mode.

**STEP 2**

Press the desired button (“1”, “2” or “3”) to recall the position. Then, while keep pressing the button, press the driver’s door lock switches (either lock or unlock) until the signal beeps.

The driving position is recalled when the driver’s door is unlocked using the entry function or wireless remote control and the driver’s door is opened.
1-4. Adjustable components (seats, mirrors, steering wheel)

Power easy access system (driver’s side only)

When the driver enters and exits the vehicle, the driver’s seat and steering wheel will automatically perform the following operations:

Exiting the vehicle: When all of the following actions have been performed, the steering wheel will move up and back to the point farthest away from the driver and the seat will move backward (auto away function):

• The shift lever has been shifted to P
• The “POWER” switch has been turned off
• The driver seat belt has been unfastened

Entering the vehicle: When either of the following actions has been performed, the steering wheel will move toward the driver and seat will move forward (auto return function):

• The “POWER” switch has been turned to ACCESSORY mode
• The driver seat belt has been fastened
■ When driving position memory is linked with door unlock operation

If the driver’s door is opened, the driver’s seat will move toward the memorized position but stop slightly beforehand to allow easy access to the vehicle. Turning the “POWER” switch to ACCESSORY mode or fastening the driver’s seat belt moves the seat fully into the memorized position.

■ Canceling the linked door unlock operation

**STEP 1** Turn the “POWER” switch to ON mode and close the driver’s door.
**STEP 2** While pressing the “SET” button, press the driver’s door lock switches (either lock or unlock) until the signal beeps.

■ Operating the driving position memory after turning the “POWER” switch off

Memorized positions (except for the steering wheel position) can be activated up to 180 seconds after the driver’s door is opened and another 60 seconds after it is closed again, even after turning the “POWER” switch off.

■ Stopping seat position operation part-way through

Perform any of the following operations:

- Press the “SET” button.
- Press button “1”, “2” or “3”.
- Adjust the seat using the switches (only cancels seat position recall).
- Adjust the steering wheel using the tilt and telescopic steering control switch (only cancels steering wheel position recall).

■ Correct seat position

When the seat is in the most forward or most backward position, and the seat is being moved in those directions, the system may not correctly recognize the current position and the memorized position will not be correctly recalled.

■ The auto away function for exiting the driver seat

If the seat is already close to the rearmost position, the auto away function may not operate when the driver exits the vehicle.

■ Customization

The distance that the driver’s seat moves backward during the auto away function can be changed. (Customizable features → P. 693)
### CAUTION

- **Seat adjustment caution**

  Take care during seat adjustment so that the seat does not strike the rear passenger or squeeze your body against the steering wheel.
Head restraints are provided for all seats.

1. **Up**
   Pull the head restraints up.

2. **Down**
   Push the head restraint down while pressing the lock release button.

**Removing the head restraints**

Pull the head restraint up while pressing the lock release button.

**Installing the head restraints**

Align the head restraint with the installation holes and push it down to the lock position.
Press and hold the lock release button when lowering the head restraint.
Adjusting the height of the head restraints (front seats)

Make sure that the head restraints are adjusted so that the center of the head restraint is closest to the top of your ears.

Adjusting the rear seat head restraints

Always raise the head restraints to the uppermost lock position during use.

CAUTION

Head restraint precautions

Observe the following precautions regarding the head restraints. Failure to do so may result in death or serious injury.

- Use the head restraints designed for each respective seat.
- Adjust the head restraints to the correct position at all times.
- After adjusting the head restraints, push down on them and make sure they are locked in position.
- Do not drive with the head restraints removed.
Make sure that all occupants are wearing their seat belts before driving the vehicle.

■ Correct use of the seat belts

- Extend the shoulder belt so that it comes fully over the shoulder, but does not come into contact with the neck or slide off the shoulder.
- Position the lap belt as low as possible over the hips.
- Adjust the position of the seatback. Sit up straight and well back in the seat.
- Do not twist the seat belt.

■ Fastening and releasing the seat belt

1 To fasten the seat belt, push the plate into the buckle until a click sound is heard.
2 To release the seat belt, press the release button.
## Adjusting the seat belt shoulder anchor height (front seats)

1. Push the seat belt shoulder anchor down while pressing the release button.
2. Push the seat belt shoulder anchor up.

Move the height adjuster up and down as needed until you hear a click.

## Seat belt comfort guide (outside rear seats)

If the shoulder belt sits close to a person's neck, use the seat belt comfort guide.

1. Pull the comfort guide from the pocket.

2. Slide the belt past the slot of the guide.

The elastic cord must be behind the seat belt.
Before driving

**Buckle the seat belt and position it comfortably.**

**STEP 3**

**Seat belt pretensioners (front and outside rear seats)**

The pretensioner helps the seat belt to quickly restrain the occupant by retracting the seat belt when the vehicle is subjected to certain types of severe frontal collision.

The pretensioner may not activate in the event of a minor frontal impact, a side impact or a rear impact.
Pre-collision seat belts (front seats of vehicles with a pre-collision system)

If the pre-collision sensor detects that a collision is unavoidable, the pre-collision system will retract the seat belt, thus enhancing the effectiveness of the seat belt pretensioner in a crash.

The same will happen if the driver makes an emergency braking or loses control of the vehicle. (→P. 282)

Emergency locking retractor (ELR)

The retractor will lock the belt during a sudden stop or on impact. It may also lock if you lean forward too quickly. To allow the belt to extend, retract the belt and then pull it slowly.

Automatic locking retractor (ALR)

When a passenger’s shoulder belt is completely extended and then retracted even slightly, the belt is locked in that position and cannot be extended. This feature is used to hold the child restraint system (CRS) firmly. To free the belt again, press the buckle release button and fully retract the seat belt. (→P. 153)

Pregnant women

Obtain medical advice and wear the seat belt in the proper way. (→P. 97)

Women who are pregnant should position the lap belt as low as possible over the hips in the same manner as other occupants. Extend the shoulder belt completely over the shoulder and position the belt across the chest. Avoid belt contact over the round part of the abdominal area.

If the seat belt is not worn properly, not only the pregnant woman, but also the fetus could suffer death or serious injury as a result of sudden braking or a collision.
- **People suffering illness**
  Obtain medical advice and wear the seat belt in the proper way.

- **Child seat belt usage**
  The seat belts of your vehicle were principally designed for persons of adult size.
  - Use a child restraint system appropriate for the child, until the child becomes large enough to properly wear the vehicle’s seat belt. (→P. 149)
  - When the child becomes large enough to properly wear the vehicle’s seat belt, follow the instructions on P. 97 regarding seat belt usage.

- **Replacing the belt after the pretensioner has been activated**
  If the vehicle is involved in multiple collisions, the pretensioner will activate for the first collision, but will not activate for the second or subsequent collisions.

- **Seat belt extender**
  If your seat belts cannot be fastened securely because they are not long enough, a personalized seat belt extender is available from your Lexus dealer free of charge.
1-4. Adjustable components (seats, mirrors, steering wheel)

| CAUTION |

Observe the following precautions to reduce the risk of injury in the event of sudden braking, sudden swerving or an accident. Failing to do so may cause death or serious injury.

- **Wearing a seat belt**
  - Ensure that all passengers wear a seat belt.
  - Always wear a seat belt properly.
  - Each seat belt should be used by one person only. Do not use a seat belt for more than one person at once, including children.
  - Lexus recommends that children be seated in the rear seat and always use a seat belt and/or an appropriate child restraint system.
  - To achieve a proper seating position, do not recline the seat more than necessary. The seat belt is most effective when the occupants are sitting up straight and well back in the seats.
  - Do not wear the shoulder belt under your arm.
  - Always wear your seat belt low and snug across your hips.

- **When children are in the vehicle**
  Do not allow children to play with the seat belt. If the seat belt becomes twisted around a child’s neck, it may lead to choking or other serious injuries that could result in death.
  If this occurs and the buckle cannot be unfastened, scissors should be used to cut the belt.

- **Adjustable shoulder anchor**
  Always make sure the shoulder belt is positioned across the center of your shoulder. The belt should be kept away from your neck, but not falling off your shoulder. Failure to do so could reduce the amount of protection in an accident and cause death or serious injuries in the event of a sudden stop, sudden swerve or accident. (→ P. 98)
1-4. Adjustable components (seats, mirrors, steering wheel)

CAUTION

■ Seat belt pretensioners

● Do not place anything, such as a cushion, on the front passenger’s seat. Doing so will disperse the passenger’s weight, which prevents the sensor from detecting the passenger’s weight properly. As a result, the seat belt pretensioner for the front passenger’s seat may not activate in the event of a collision.

● If the pretensioner has activated, the SRS warning light will come on. In that case, the seat belt cannot be used again and must be replaced at your Lexus dealer.

■ Seat belt damage and wear

● Do not damage the seat belts by allowing the belt, plate, or buckle to be jammed in the door.

● Inspect the seat belt system periodically. Check for cuts, fraying, and loose parts. Do not use a damaged seat belt until it is replaced. Damaged seat belts cannot protect an occupant from death or serious injury.

● Ensure that the belt and tab are locked and the belt is not twisted. If the seat belt does not function correctly, immediately contact your Lexus dealer.

● Replace the seat assembly, including the belts, if your vehicle has been involved in a serious accident, even if there is no obvious damage.

● Do not attempt to install, remove, modify, disassemble or dispose of the seat belts. Have any necessary repairs carried out by your Lexus dealer. Inappropriate handling of the pretensioner may prevent it from operating properly, resulting in death or serious injury.

■ Using a seat belt comfort guide

Failure to observe the following precautions could reduce the effectiveness of the seat belt in an accident, causing death or serious injury.

● Make sure the belt is not twisted and that it lies flat. The elastic cord must be behind the belt and the guide must be on the front.

● To reduce the chance of injury in case of a sudden stop, sudden swerve or accident while driving, remove and store the comfort guide in its pocket when it is not in use.

● Always make sure the shoulder belt is positioned across the center of the shoulder. The belt should be kept away from the neck, and should not fall off the shoulder.
1-4. Adjustable components (seats, mirrors, steering wheel)

</thead>
<tbody>
<tr>
<td><strong>When using a seat belt extender</strong></td>
</tr>
<tr>
<td>When releasing the seat belt, press on the buckle release button on the extender, not on the seat belt. This helps prevent damage to the vehicle interior and the extender itself.</td>
</tr>
</tbody>
</table>
The steering wheel can be adjusted to a comfortable position.

Operating the switch moves the steering wheel in the following directions:

1. Up
2. Down
3. Away from the driver
4. Toward the driver

When the “POWER” switch is turned off, the steering wheel returns to its stowed position by moving up and away to enable easier driver entry and exit.

Turning the “POWER” switch to ACCESSORY or ON mode will return the steering wheel to the original position.

- The steering wheel can be adjusted when
  The “POWER” switch is in ACCESSORY or ON mode*.
  *
  Vehicles with driving position memory: If the driver’s seat belt is fastened, the steering wheel can be adjusted regardless of “POWER” switch mode.

- Automatic adjustment of the steering position (vehicles with driving position memory)
  A desired steering position can be entered to memory and recalled automatically by the driving position memory. (→P. 90)
Notes for the auto tilt away function (vehicles with driving position memory)

The auto tilt away function can only operate when the “POWER” switch has been turned off, the driver seat belt has been unfastened and the driver’s seat movement (→P. 693) is in a setting other than off.

When the driver fastens the seat belt again, the steering wheel will return to the original position. (→P. 92)

---

**CAUTION**

- **Caution while driving**
  - Do not adjust the steering wheel while driving.
  - Doing so may cause the driver to mishandle the vehicle and cause an accident, resulting in death or serious injury.
1-4. Adjustable components (seats, mirrors, steering wheel)

Anti-glare inside rear view mirror

In automatic mode, sensors are used to detect the headlights of vehicles behind and the reflected light is automatically reduced.

**Turns automatic mode on/off**

The indicator comes on when automatic mode is turned on.
The mirror will revert to automatic mode each time the “POWER” switch is turned to ON mode.

### Adjusting the height of rear view mirror

Adjust the height of the rear view mirror by moving it up and down.

#### To prevent sensor error

To ensure that the sensors operate properly, do not touch or cover them.
CAUTION

- Caution while driving
  Do not adjust the position of the mirror while driving. Doing so may lead to mishandling of the vehicle and cause an accident, resulting in death or serious injury.
Outside rear view mirrors

Mirror angle can be adjusted using the switch.

To select a mirror to adjust, press the switch.

1. Left
2. Right

Pressing the same switch again will put the switch in neutral.

To adjust the mirror, press the switch.

1. Up
2. Right
3. Down
4. Left

Manually folding and extending the mirrors

Push the mirror back in the direction of the vehicle’s rear.
Automatically folding and extending the mirrors (if equipped)

- **Using the switch**
  
  Press the switch to fold the mirrors.
  
  Press it again to return them.

- **Setting automatic mode**
  
  Automatic mode allows the folding or extending of the mirrors to be linked to locking/unlocking of the doors.
  
  Press the “AUTO” switch to set automatic mode.
  
  The indicator will come on.

- **Mirror angle can be adjusted when**
  
  The “POWER” switch is in ACCESSORY or ON mode.

- **Linked mirror function when reversing**
  
  The right and left outside rear view mirrors will automatically angle downwards when the vehicle is reversing in order to give a better view of the ground. This function only operates when either the “L” or “R” mirror select switch is selected.

- **When the mirrors are fogged up**
  
  Turn on the mirror defoggers to defog the mirrors. (→P. 330)
■ Automatic adjustment of the mirror angle (vehicles with driving position memory)

A desired mirror face angle can be entered to memory and recalled automatically by the driving position memory. (→P. 90)

■ Auto anti-glare function (if equipped)

When the anti-glare inside rear view mirror is set to automatic mode, the outside rear view mirrors will activate in conjunction with the anti-glare inside rear view mirror to reduce reflected light. (→P. 107)

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
</table>

■ When driving the vehicle

Observe the following precautions while driving. Failing to do so may result in loss of control of the vehicle and cause an accident, resulting in death or serious injury.

- Do not adjust the mirrors while driving.
- Do not drive with the mirrors folded.
- Both the driver and passenger side mirrors must be extended and properly adjusted before driving.

■ When a mirror is moving

To avoid personal injury and mirror malfunction, be careful not to get your hand caught by the moving mirror.

■ When the mirror defoggers are operating

Do not touch the rear view mirror surfaces, as they can become very hot and burn you.
The power windows can be opened and closed using the switches.

Operating the switch moves the windows as follows:

1. **Closing**
2. **One-touch closing** *
3. **Opening**
4. **One-touch opening** *

*: Pushing the switch in the opposite direction will stop window travel partway.

---

**Window lock switch**

Press the switch to lock the passenger window switches.

The indicator will come on.

Use this switch to prevent children from accidentally opening or closing a passenger window.

The passenger windows can still be opened and closed using the power window switches on the driver’s side even if the lock switch is on.

---

The power windows can be operated when

The “POWER” switch is in ON mode.
■ Operating the power windows after turning the hybrid system off

The power windows can be operated for approximately 45 seconds even after the “POWER” switch is turned to ACCESSORY mode or turned off. They cannot, however, be operated once either front door is opened.

■ Jam protection function

If an object becomes caught between the window and the window frame, window travel is stopped and the window is opened slightly.

■ When the power window does not close normally

If the jam protection function is operating abnormally and a window cannot be closed, perform the following operations using the power window switch on the relevant door.

- After stopping the vehicle, the window can be closed by holding the power window switch in the one-touch closing position while the “POWER” switch is turned to ON mode.

- If the window still cannot be closed even by carrying out the operation explained above, initialize the function by performing the following procedure.

  **STEP 1** Hold the power window switch in the one-touch closing position. Continue holding the switch for a further 6 seconds after the window has closed.

  **STEP 2** Hold the power window switch in the one-touch opening position. Continue holding the switch for a further 2 seconds after the window has opened completely.

  **STEP 3** Hold the power window switch in the one-touch closing position once again. Continue holding the switch for a further 2 seconds after the window has closed.

If you release the switch while the window is moving, start again from the beginning. If the window continues to close but then re-open slightly even after performing the above procedure correctly, have the vehicle inspected by your Lexus dealer.
1-5. Opening and closing the windows and moon roof

■ Door lock linked window operation
  ● The power windows can be opened and closed using the mechanical key. (→P. 647)
  ● The power windows can be opened using the wireless remote control. (→P. 64)

■ When the 12-volt battery is disconnected
  The window lock switch is disabled. If necessary, press the window lock switch after reconnecting the battery.

■ Customization
  Settings (e.g. linked door lock operation) can be changed. (Customizable features →P. 693)

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>■ Closing the windows</td>
</tr>
<tr>
<td>Observe the following precautions. Failing to do so may result in death or serious injury.</td>
</tr>
</tbody>
</table>
  ● Check to make sure that all passengers do not have any part of their body in a position where it could be caught when a window is being operated. |
  ● Do not allow children to operate the power windows. Closing a power window on someone can cause serious injury, and in some instances, even death. |
| ■ Jam protection function |
  ● Never use any part of your body to intentionally activate the jam protection function. |
  ● The jam protection function may not work if something gets caught just before the window fully closes. Also, the jam protection does not operate when the power window switch is pulled up continually to close the windows. |
1-5. Opening and closing the windows and moon roof

Moon roof*

Use the overhead switches to open and close the moon roof and tilt it up and down.

■ Opening and closing

1 Opens the moon roof*

The moon roof stops slightly before the fully open position to reduce wind noise.

Press the switch again to fully open the moon roof.

2 Closes the moon roof*

*: Lightly press either of the moon roof switches to stop the moon roof partway.

■ Tilting up and down

1 Tilts the moon roof up*

2 Tilts the moon roof down*

*: Lightly press either of the moon roof switches to stop the moon roof partway.

*: If equipped
The moon roof can be operated when
The “POWER” switch is in ON mode.

Operating the moon roof after turning the hybrid system off
The moon roof can be operated for approximately 45 seconds even after the “POWER” switch is turned to ACCESSORY mode or turned off. It cannot, however, be operated once either front door is opened.

Jam protection function
If an object is detected between the moon roof and the frame while the moon roof is closing or tilting down, travel is stopped and the moon roof opens slightly.

Sunshade
The sunshade can be opened and closed manually. However, the sunshade will open automatically when the moon roof is opened.

Door lock linked moon roof operation
- The moon roof can be opened and closed using the mechanical key. (→P. 647)
- The moon roof can be opened using the wireless remote control. (→P. 64)
When the moon roof does not close normally

Perform the following procedure:

- If the moon roof closes but then re-opens slightly
  
  **STEP 1** Stop the vehicle.
  
  **STEP 2** Press and hold the “CLOSE” switch.*1
  The moon roof will close, reopen and pause for approximately 10 seconds.*2 Then it will close again, tilt up and pause for approximately 1 second. Finally, it will tilt down, open and close.
  
  **STEP 3** Check to make sure that the moon roof is completely closed and then release the switch.

- If the moon roof tilts down but then tilts back up
  
  **STEP 1** Stop the vehicle.
  
  **STEP 2** Press and hold the “UP” switch*1 until the moon roof moves into the tilt up position and stops.
  
  **STEP 3** Release the “UP” switch once and then press and hold the “UP” switch again.*1
  The moon roof will pause for approximately 10 seconds in the tilt up position.*2 Then it will adjust slightly and pause for approximately 1 second. Finally, it will tilt down, open and close.
  
  **STEP 4** Check to make sure that the moon roof is completely closed and then release the switch.
  
  *1: If the switch is released at the incorrect time, the procedure will have to be performed again from the beginning.
  
  *2: If the switch is released after the above mentioned 10 second pause, automatic operation will be disabled. In that case, press and hold the “CLOSE” or “UP” switch, and the moon roof will tilt up and pause for approximately 1 second. Then it will tilt down, open and close. Check to make sure that the moon roof is completely closed and then release the switch.

If the moon roof does not fully close even after performing the above procedure correctly, have the vehicle inspected by your Lexus dealer.

- Customization

  Settings (e.g. linked door lock operation) can be changed.
  (Customizable features → P. 693)

</tbody>
</table>
The fuel tank of your vehicle has a special structure, which requires a reduction in fuel tank pressure before refueling. After the opener switch has been pressed, it will take several seconds until the vehicle is ready for refueling.

- **Before refueling the vehicle**
  Turn the “POWER” switch off and close all the doors and windows.

- **Opening the fuel tank cap**
  Press the opener to open the fuel filler door.

  The fuel filler door will open within about 10 seconds of the switch being pressed. Before refueling is possible, a message will be shown on the multi-information display in the instrument cluster to indicate the progress of the fuel filler door opener. (→P. 620)

  Turn the fuel tank cap slowly to open.
Closing the fuel tank cap

After refueling, turn the fuel tank cap until you hear a click.

Hang the fuel tank cap on the back of the fuel filler door.
If the fuel filler door opener is inoperable

**STEP 1** Lift the luggage mat up. (→P. 525)

With a compact spare tire only:
Remove the spare tire cover.

**STEP 2**

Remove the 12-volt battery cover.

**STEP 3**

Pull the lever.

If the fuel filler door opener switch cannot be operated, contact your Lexus dealer to service the vehicle. If refueling is urgently necessary, the fuel filler door can be opened using the lever in the luggage compartment.

**STEP 4**

Install the clips.

Using the lever to open the fuel filler door may not allow for an adequate reduction in fuel tank pressure before refueling. To prevent fuel from spilling out, turn the cap slowly when removing it.

During refueling, fuel may spill out from the filler opening due to air being discharged from inside the fuel tank. Therefore, fill the fuel tank carefully and slowly.
<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
</table>

■ **When refueling the vehicle**

Observe the following precautions while refueling the vehicle. Failure to do so may result in death or serious injury.

- After exiting the vehicle and before opening the fuel door, touch an unpainted metal surface to discharge any static electricity. It is important to discharge static electricity before refueling because sparks resulting from static electricity can cause fuel vapors to ignite while refueling.

- Always hold the grips on the fuel tank cap and turn it slowly to remove it. A whooshing sound may be heard when the fuel tank cap is loosened. Wait until the sound cannot be heard before fully removing the cap. In hot weather, pressurized fuel may spray out of the filler neck and cause injury.

- Do not allow anyone that has not discharged static electricity from their body to come close to an open fuel tank.

- Do not inhale vaporized fuel. Fuel contains substances that are harmful if inhaled.

- Do not smoke while refueling the vehicle. Doing so may cause the fuel to ignite and cause a fire.

- Do not return to the vehicle or touch any person or object that is statically charged. This may cause static electricity to build up, resulting in a possible ignition hazard.

■ **When refueling**

Securely insert the fuel nozzle into the fuel filler neck. If fuel is added with the nozzle slightly lifted away from the fuel filler neck, the automatic shut off function may not operate, resulting in fuel overflowing from the tank.

■ **When replacing the fuel cap**

Do not use anything but a genuine Lexus fuel tank cap designed for your vehicle. Doing so may cause a fire or other incident which may result in death or serious injury.
NOTICE

■ Refueling

- Finish refueling within 30 minutes. If more than 30 minutes passes, the internal valve closes. In this condition, fuel may overflow during the refueling process. Press the fuel filler door opener switch again.

- Do not spill fuel during refueling. Doing so may damage the vehicle, such as causing the emission control system to operate abnormally or damaging fuel system components or the vehicle's painted surface.
The vehicle’s keys have built-in transponder chips that prevent the hybrid system from starting if the key has not been previously registered in the vehicle’s on-board computer.

Never leave the keys inside the vehicle when you leave the vehicle.

The indicator light flashes after the “POWER” switch has been turned off to indicate that the system is operating. The indicator light stops flashing after the “POWER” switch has been turned to ACCESSORY or ON mode to indicate that the system has been canceled.

■ System maintenance
  The vehicle has a maintenance-free type immobilizer system.

■ Conditions affecting operation
  Depending on surrounding environment and conditions, the immobilizer system may not operate properly. This may prevent the hybrid system from starting. (→P. 57)
Certifications for the immobilizer system

This system meets the certification requirements of Radio Law.

For vehicles sold in the U.S.A.
FCC ID: NI4TMIMB-1
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

For vehicles sold in Canada
Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

⚠️ CAUTION

Certifications for the immobilizer system
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

⚠️ NOTICE

To ensure the system operates correctly
Do not modify or remove the system. If modified or removed, the proper operation of the system cannot be guaranteed.
The system sounds the alarm and flashes the lights when forcible entry is detected.

- **Triggering of the alarm**
  The alarm is triggered in the following situations when the alarm is set:
  - A locked door is unlocked or opened in any way other than using the entry function, wireless remote control or mechanical key.
  - The hood is opened.

- **Setting the alarm system**
  Close the doors and hood, and lock all the doors. The system will be set automatically after 30 seconds.
  The indicator light changes from being on to flashing when the system is set.

- **Deactivating or stopping the alarm**
  Do one of the following to deactivate or stop the alarms:
  - Unlock the doors.
  - Start the hybrid system. (The alarm will be deactivated or stopped after a few seconds.)
■ System maintenance
The vehicle has a maintenance-free type alarm system.

■ Items to check before locking the vehicle
To prevent unexpected triggering of the alarm and vehicle theft, make sure of the following:
● Nobody is in the vehicle.
● The windows and moon roof are closed before the alarm is set.
● No valuables or other personal items are left in the vehicle.

■ Triggering of the alarm
The alarm may be triggered in the following situations:
(Stopping the alarm deactivates the alarm system.)

● A person inside the vehicle opens a door or the hood.

● The 12-volt battery is recharged or replaced when the vehicle is locked.

■ Alarm-operated door lock
● When the alarm is operating, the doors are locked automatically to prevent intruders.
● Do not leave the key inside the vehicle when the alarm is operating, and make sure the key is not inside the vehicle when recharging or replacing the 12-volt battery.
<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>■ To ensure the system operates correctly</td>

</table>
These labels are attached to the vehicle to reduce vehicle theft by facilitating the tracing and recovery of parts from stolen vehicles. Do not remove under penalty of law.
1-8. Safety information
Correct driving posture

Drive in a good posture as follows:

1. Sit upright and well back in the seat. (→ P. 82)
2. Adjust the position of the seat forward or backward to ensure the pedals can be reached and easily depressed to the extent required. (→ P. 82)
3. Adjust the seatback so that the controls are easily operable. (→ P. 82)
4. Adjust the tilt and telescopic positions of the steering wheel downward so the airbag is facing your chest. (→ P. 105)
5. Lock the head restraint in place with the center of the head restraint closest to the top of your ears. (→ P. 95)
6. Wear the seat belt correctly. (→ P. 97)
CAUTION

While driving

- Do not adjust the position of the driver’s seat. Doing so could cause the driver to lose control of the vehicle.
- Do not place a cushion between the driver or passenger and the seatback. A cushion may prevent correct posture from being achieved, and reduce the effectiveness of the seat belt and head restraint, increasing the risk of death or serious injury to the driver or passenger.
- Do not place anything under the front seats. Objects placed under the front seats may become jammed in the seat tracks and stop the seat from locking in place. This may lead to an accident, resulting in death or serious injury. The adjustment mechanism may also be damaged.

Adjusting the seat position

- Take care when adjusting the seat position to ensure that other passengers are not injured by the moving seat.
- Do not put your hands under the seat or near the moving parts to avoid injury. Fingers or hands may become jammed in the seat mechanism.
The SRS airbags inflate when the vehicle is subjected to certain types of severe impacts that may cause significant injury to the occupants. They work together with the seat belts to help reduce the risk of death or serious injury.

- **SRS front airbags**
  - **1 SRS driver airbag/front passenger airbag**
    - Can help protect the head and chest of the driver and front passenger from impact with interior components
  - **2 SRS knee airbags**
    - Can help provide driver and front passenger protection
Before driving

- **SRS side and curtain shield airbags**
  - Front SRS side airbags
    Can help protect the torso of the front seat occupants
  - Rear SRS side airbags
    Can help protect the torso of occupants in the rear outer seats
  - SRS curtain shield airbags
    Can help protect primarily the head of occupants in the outer seats
Your vehicle is equipped with ADVANCED AIRBAGS designed based on US motor vehicle safety standards (FMVSS208). The airbag system controls airbag deployment power for the driver and front passenger. The driver airbag system consists of the driver’s seat position sensor etc. The front passenger’s airbag system consists of the front passenger occupant classification sensor etc.
The main SRS airbag system components are shown above. The SRS airbag system is controlled by the airbag sensor assembly. The airbag sensor assembly consists of a safing sensor and an airbag sensor.

In certain types of severe frontal or side impacts, the SRS airbag system triggers the airbag inflators. A chemical reaction in the inflators quickly fills the airbags with non-toxic gas to help restrain the motion of the occupants.

- If the SRS airbags deploy (inflate)
  - Bruising and slight abrasions may result from contact with a deploying (inflating) SRS airbag.
  - A loud noise and white powder will be emitted.
  - Parts of the airbag module (steering wheel hub, airbag cover and inflator) as well as the seats, parts of the front and rear pillars, and roof side rails, may be hot for several minutes. The airbag itself may also be hot.
  - The windshield may crack.
  - For Safety Connect subscribers, if the SRS airbags deploy or in the event of a severe rear-end collision, the system is designed to send an emergency call to the response center, notifying them of the vehicle’s location (without needing to push the “SOS” button) and an agent will attempt to speak with the occupants to ascertain the level of emergency and assistance required. If the occupants are unable to communicate, the agent automatically treats the call as an emergency and helps to dispatch the necessary emergency services. (→ P. 484)

- SRS airbag deployment conditions (SRS front airbags)
  - The SRS front airbags will deploy in the event of an impact that exceeds the set threshold level (the level of force corresponding to an approximately 12 - 18 mph [20 - 30 km/h] frontal collision with a fixed wall that does not move or deform).

However, this threshold velocity will be considerably higher if the vehicle strikes an object, such as a parked vehicle or sign pole, which can move or deform on impact, or if the vehicle is involved in an underride collision (e.g. a collision in which the front of the vehicle “underrides”, or goes under, the bed of a truck etc.).

- It is possible that in some collisions where the forward deceleration of the vehicle is very close to the designed threshold level, the SRS front airbags and the seat belt pretensioners may not activate together.
The SRS front passenger airbag will not activate if there is no passenger sitting in the front passenger seat. However, the SRS front passenger airbag may deploy if luggage is put in the seat, or the seat belt is fastened, even if the seat is unoccupied. (→ P. 97)

**SRS airbag deployment conditions (SRS side airbags and curtain shield airbags)**

The SRS side airbags and SRS curtain shield airbags will deploy in the event of an impact that exceeds the set threshold level (the level of force corresponding to the impact force produced by an approximately 3300 lb. [1500 kg] vehicle colliding with the vehicle cabin from a direction perpendicular to the vehicle orientation at an approximate speed of 12 - 18 mph [20 - 30 km/h]).

**Conditions under which the SRS airbags may deploy (inflate), other than a collision (SRS front airbags)**

The SRS front airbags may also deploy if a serious impact occurs to the underside of your vehicle. Some examples are shown in the illustration.

- Hitting a curb, edge of pavement or hard surface
- Falling into or jumping over a deep hole
- Landing hard or vehicle falling

The SRS curtain shield airbags may also deploy under the situations shown in the illustration.

- The angle of vehicle tip-up is marginal.
- The vehicle skids and hits a curb stone.
Types of collisions that may not deploy the SRS airbags (SRS front airbags)

The SRS front airbags are generally not designed to inflate if the vehicle is involved in a side or rear collision, if it rolls over, or if it is involved in a low-speed frontal collision. But, whenever a collision of any type causes sufficient forward deceleration of the vehicle, deployment of the SRS front airbags may occur.

- Collision from the side
- Collision from the rear
- Vehicle rollover

Types of collisions that may not deploy the SRS airbags (SRS side airbags and curtain shield airbags)

The SRS side airbag and curtain shield airbag system may not activate if the vehicle is subjected to a collision from the side at certain angles, or a collision to the side of the vehicle body other than the passenger compartment.

- Collision from the side to the vehicle body other than the passenger compartment
- Collision from the side at an angle

The SRS side airbags and curtain shield airbags are not generally designed to inflate if the vehicle is involved in a frontal or rear collision, if it rolls over, or if it is involved in a low-speed side collision.

- Collision from the front
- Collision from the rear
- Vehicle rollover
When to contact your Lexus dealer

In the following cases, contact your Lexus dealer as soon as possible.

- Any of the SRS airbags has been inflated.
- The front of the vehicle is damaged or deformed, or was involved in an accident that was not severe enough to cause the SRS airbags to inflate.
- A portion of the doors is damaged or deformed, or the vehicle was involved in an accident that was not severe enough to cause the SRS side airbags and curtain shield airbags to inflate.
- The pad section of the steering wheel, dashboard near the front passenger airbag or lower portion of the instrument panel is scratched, cracked, or otherwise damaged.
- The surface of the seats with the side airbag is scratched, cracked, or otherwise damaged.
- The portion of the front pillars, rear pillars or roof side rail garnishes (padding) containing the curtain shield airbags inside is scratched, cracked, or otherwise damaged.
### CAUTION

**SRS airbag precautions**

Observe the following precautions regarding the SRS airbags. Failure to do so may cause death or serious injury.

1. **The driver and all passengers in the vehicle must wear their seat belts properly.** The SRS airbags are supplemental devices to be used with the seat belts.

2. **The SRS driver airbag deploys with considerable force, and can cause death or serious injury especially if the driver is very close to the airbag.** The National Highway Traffic Safety Administration (“NHTSA”) advises:

   Since the risk zone for driver’s airbag is the first 2 - 3 in. (50 - 75 mm) of inflation, placing yourself 10 in. (250 mm) from your driver airbag provides you with a clear margin of safety. This distance is measured from the center of the steering wheel to your breastbone. If you sit less than 10 in. (250 mm) away now, you can change your driving position in several ways:

   - Move your seat to the rear as far as you can while still reaching the pedals comfortably.
   - Slightly recline the back of the seat.

     Although vehicle designs vary, many drivers can achieve the 10 in. (250 mm) distance, even with the driver seat all the way forward, simply by reclining the back of the seat somewhat. If reclining the back of your seat makes it hard to see the road, raise yourself by using a firm, non-slippery cushion, or raise the seat if your vehicle has that feature.

   - If your steering wheel is adjustable, tilt it downward. This points the airbag toward your chest instead of your head and neck.

The seat should be adjusted as recommended by NHTSA above, while still maintaining control of the foot pedals, steering wheel, and your view of the instrument panel controls.
### CAUTION

<table>
<thead>
<tr>
<th>SRS airbag precautions</th>
</tr>
</thead>
</table>

- If the seat belt extender has been connected to the driver’s seat belt buckle but the seat belt extender has not also been fastened to the latch plate of the driver’s seat belt, the SRS driver’s airbag system will judge that the driver is wearing the seat belt even though the seat belt has not been connected. In this case, the driver’s airbag may not activate correctly in a collision, resulting in death or serious injury in the event of collision. Be sure to wear the seat belt with the seat belt extender.

- The SRS front passenger airbag also deploys with considerable force, and can cause death or serious injury especially if the front passenger is very close to the airbag. The front passenger seat should be as far from the airbag as possible with the seatback adjusted, so the front passenger sits upright.

- Improperly seated and/or restrained infants and children can be killed or seriously injured by a deploying airbag. An infant or child who is too small to use a seat belt should be properly secured using a child restraint system. Lexus strongly recommends that all infants and children be placed in the rear seats of the vehicle and properly restrained. The rear seats are safer for infants and children than the front passenger seat. (→ P. 149)
## CAUTION

**SRS airbag precautions**

- Do not sit on the edge of the seat or lean against the dashboard.

- Do not allow a child to stand in front of the SRS front passenger airbag unit or sit on the knees of a front passenger.

- Do not allow the front seat occupants to hold items on their knees.

- Do not lean against the door, the roof side rail or the front, side and rear pillars.

- Do not allow anyone to kneel on the passenger seats toward the door or put their head or hands outside the vehicle.
CAUTION

SRS airbag precautions

- Do not attach anything to or lean anything against areas such as the dashboard, steering wheel pad or lower portion of the instrument panel. These items can become projectiles when SRS driver, front passenger and knee airbags deploy.

- Do not attach anything to areas such as the door, windshield glass, side door glass, front and rear pillars, roof side rail or assist grip.

- Do not hang coat hangers or other hard objects on the coat hooks. All of these items could become projectiles and may cause death or serious injury, should the SRS curtain shield airbags deploy.

- If a vinyl cover is put on the area where the SRS knee airbags will deploy, be sure to remove it.

- Do not use seat accessories which cover the parts where the SRS side airbags inflate as they may interfere with inflation of the airbags. Such accessories may prevent the side airbags from activating correctly, disable the system or cause the side airbags to inflate accidentally, resulting in death or serious injury.

- Do not strike or apply significant levels of force to the area of the SRS airbag components. Doing so can cause the SRS airbags to malfunction.

- Do not touch any of the component parts immediately after the SRS airbags have deployed (inflated) as they may be hot.

- If breathing becomes difficult after the SRS airbags have deployed, open a door or window to allow fresh air in, or leave the vehicle if it is safe to do so. Wash off any residue as soon as possible to prevent skin irritation.

- If the areas where the SRS airbags are stored, such as the steering wheel pad and front and rear pillar garnishes, are damaged or cracked, have them replaced by your Lexus dealer.
Before driving

**CAUTION**

- **SRS airbag precautions**
  - Do not place anything, such as a cushion, on the front passenger’s seat. Doing so will disperse the passenger’s weight, which prevents the sensor from detecting the passenger’s weight properly. As a result, the SRS front passenger airbag may not deploy in the event of a collision.

- **Modification and disposal of SRS airbag system components**
  Do not dispose of your vehicle or perform any of the following modifications without consulting your Lexus dealer. The SRS airbags may malfunction or deploy (inflate) accidentally, causing death or serious injury.
  - Installation, removal, disassembly and repair of the SRS airbags
  - Repairs, modifications, removal or replacement of the steering wheel, instrument panel, dashboard, seats or seat upholstery, front, side and rear pillars or roof side rails
  - Repairs or modifications of the front fender, front bumper, or side of the occupant compartment
  - Installation of snow plows, winches, etc. to the front grille (bull bars or kangaroo bar etc.)
  - Modifications to the vehicle’s suspension system
  - Installation of electronic devices such as mobile two-way radios or CD players
  - Modifications to your vehicle for a person with a physical disability
Your vehicle is equipped with a front passenger occupant classification system. This system detects the condition of the front passenger seat and activates or deactivates the devices for the front passenger.

*1: The system judges a person of adult size as an adult. When a smaller adult sits in the front passenger seat, the system may recognize him/her as a child depending on his/her physique and posture.

*2: In the event the front passenger does not wear a seat belt.

*3: When a larger child who has outgrown a child restraint system sits in the front passenger seat, the system may recognize him/her as an adult depending on his/her physique or posture.
Never install a rear-facing child restraint system on the front passenger seat. A forward-facing child restraint system should only be installed on the front passenger seat when it is unavoidable. (→P. 149)

If the indicator light is not illuminated, consult this manual on how to install the child restraint system properly. (→P. 153)

**CAUTION**

**Front passenger occupant classification system precautions**

Observe the following precautions regarding the front passenger occupant classification system. Failure to do so may cause death or serious injury.

- Wear the seat belt properly.
- Make sure the front passenger’s seat belt tab has not been left inserted into the buckle before someone sits in the front passenger seat.
- Make sure the “AIR BAG OFF” indicator light is not illuminated when using the seat belt extender for the front passenger seat. If the “AIR BAG OFF” indicator light is illuminated, disconnect the extender tongue from the seat belt buckle, then reconnect the seat belt. Reconnect the seat belt extender after making sure the “AIR BAG ON” indicator light is illuminated. If you use the seat belt extender while the “AIR BAG OFF” indicator light is illuminated, the front passenger airbag, side airbag on the front passenger side and front passenger knee airbag may not activate correctly, which could cause death or serious injury in the event of collision.
- Do not apply a heavy load to the front passenger seat or equipment.
- Do not put weight on the front passenger seat by putting your hands or feet on the front passenger seat seatback from the rear passenger seat.
- Do not let a rear passenger lift the front passenger seat with their feet or press on the seatback with their legs.
- Do not put objects under the front passenger seat.
1-8. Safety information

**CAUTION**

- **Front passenger occupant classification system precautions**
  
  - Do not recline the front passenger seatback so far that it touches a rear seat. This may cause the “AIR BAG OFF” indicator light to be illuminated, which indicates that the passenger’s airbags will not deploy in the event of a severe accident. If the seatback touches the rear seat, return the seatback to a position where it does not touch the rear seat. Keep the front passenger seatback as upright as possible when the vehicle is moving. Reclining the seatback excessively may lessen the effectiveness of the seat belt system.

  - If an adult sits in the front passenger seat, the “AIR BAG ON” indicator light is illuminated. If the “AIR BAG OFF” indicator is illuminated, ask the passenger to sit up straight, well back in the seat, feet on the floor, and with the seat belt worn correctly. If the “AIR BAG OFF” indicator still remains illuminated, either ask the passenger to move to the rear seat, or if that is not possible, move the front passenger seat fully rearward.

  - When it is unavoidable to install the forward-facing child restraint system on the front passenger seat, install the child restraint system on the front passenger seat in the proper order. (→P. 153)

  - Do not modify or remove the front seats.

  - Do not kick the front passenger seat or subject it to severe impact. Otherwise, the SRS warning light may come on to indicate a malfunction of the detection system. In this case, contact your Lexus dealer immediately.

  - Child restraint systems installed on the rear seat should not contact the front seatbacks.

  - Do not use a seat accessory, such as a cushion or seat cover, that covers the seat cushion surface.

  - Do not modify or replace the upholstery of the front seat.
A child restraint system for a small child or baby must itself be properly restrained on the seat with the lap portion of the lap/shoulder belt. The laws of all 50 states of the U.S.A. and Canada now require the use of child restraint systems.

**Points to remember**

Studies have shown that installing a child restraint on a rear seat is much safer than installing one to the front passenger seat.

- Choose a child restraint system that suits your vehicle and is appropriate to the age and size of the child.
- For installation details, follow the instructions provided with the child restraint system.
  General installation instructions are provided in this manual. (→P.153)

**Types of child restraints**

Child restraint systems are classified into the following 3 types according to the age and size of the child.

- Rear facing — Infant seat/convertible seat
Forward facing — Convertible seat

Booster seat

Selecting an appropriate child restraint system

- Use a child restraint system appropriate for the child until the child becomes large enough to properly wear the vehicle’s seat belt.
- If the child is too large for a child restraint system, sit the child on a rear seat and use the vehicle’s seat belt. (→P. 97)
1-8. Safety information

CAUTION

Child restraint precautions

- For effective protection in automobile accidents and sudden stops, a child must be properly restrained, using a seat belt or child restraint system depending on the age and size of the child. Holding a child in your arms is not a substitute for a child restraint system. In an accident, the child can be crushed against the windshield, or between you and the vehicle’s interior. This may cause death or serious injury to the child in the event of a sudden stop or an accident.

- Lexus strongly urges the use of a proper child restraint system that conforms to the size of the child, installed on the rear seat. According to accident statistics, the child is safer when properly restrained in the rear seat than in the front seat.

- Never install a rear-facing child restraint system on the front passenger seat even if the “AIR BAG OFF” indicator light is illuminated. In the event of an accident, the force of the rapid inflation of the front passenger airbag can cause death or serious injury to the child if a rear-facing child restraint system is installed on the front passenger seat.

- A forward-facing child restraint system may be installed on the front passenger seat only when it is unavoidable. A child restraint system that requires a top tether strap should not be used in the front passenger seat since there is no top tether strap anchor for the front passenger seat. Adjust the seatback as upright as possible and always move the seat as far back as possible even if the “AIR BAG OFF” indicator light is illuminated, because the front passenger airbag could inflate with considerable speed and force. Otherwise, the child may be killed or seriously injured.

- Do not use the seat belt extender when installing a child restraint system on the front or rear passenger seat. If installing a child restraint system with the seat belt extender connected to the seat belt, the seat belt will not securely hold the child restraint system, which could cause death or serious injury to the child or other passengers in the event of a sudden stop, sudden swerve or accident.

- Do not allow the child to lean his/her head or any part of his/her body against the door or the area of the seat, front and rear pillars or roof side rails from which the SRS side airbags or SRS curtain shield airbags deploy even if the child is seated in the child restraint system. It is dangerous if the side airbags and curtain shield airbags inflate, and the impact could cause death or serious injury to the child.
CAUTION

Child restraint precautions

Make sure you have complied with all installation instructions provided by the child restraint manufacturer and that the system is properly secured. If it is not secured properly, it may cause death or serious injury to the child in the event of a sudden stop, sudden swerve or an accident.

When children are in the vehicle

Do not allow children to play with the seat belt. If the seat belt becomes twisted around a child’s neck, it may lead to choking or other serious injuries that could result in death.

If this occurs and the buckle cannot be unfastened, scissors should be used to cut the belt.

When the child restraint system is not in use

Keep the child restraint system properly secured on the seat even if it is not in use. Do not store the child restraint system unsecured in the passenger compartment.

If it is necessary to detach the child restraint system, remove it from the vehicle or store it securely in the luggage compartment. This will prevent it from injuring passengers in the event of a sudden stop, sudden swerve or accident.
Follow the child restraint system manufacturer’s instructions. Firmly secure child restraints to the seats using the LATCH anchors or a seat belt. Attach the top tether strap when installing a child restraint.

The lap/shoulder belt can be used if your child restraint system is not compatible with the LATCH (Lower Anchors and Tethers for Children) system.

Child restraint LATCH anchors
LATCH anchors are provided for the outer rear seats. (Buttons displaying the location of the anchors are attached to the seats.)

Seat belts equipped with a child restraint locking mechanism (ALR/ELR belts except driver’s seat belt) (→P. 97)

Anchor brackets (for top tether strap)
An anchor bracket is provided for each rear seat.
### Installation with LATCH system

**STEP 1** Fold the seatback while pulling the seatback angle adjustment lever. Return the seatback and secure it at the first lock position. (→P. 86)

**STEP 2** Widen the gap between the seat cushion and seatback slightly.

- Type A

**STEP 3** Latch the hooks of the lower straps onto the LATCH anchors. If the child restraint has a top tether strap, the top tether strap should be latched onto the top tether strap anchor bracket.

For owners in Canada:
The symbol on a child restraint system indicates the presence of a lower connector system.
Latch the buckles onto the LATCH anchors. If the child restraint has a top tether strap, the top tether strap should be latched onto the top tether strap anchor bracket.

For owners in Canada:
The symbol on a child restraint system indicates the presence of a lower connector system.

STEP 4 If the child restraint has a top tether strap, the top tether strap should be latched onto the top tether strap anchor. (→P.160)
Installing child restraints using a seat belt (child restraint lock function belt)

- Rear-facing — Infant seat/convertible seat

**STEP 1**
Fold the seatback while pulling the seatback angle adjustment lever. Return the seatback and secure it at the first lock position. (→P. 86)

**STEP 2**
Place the child restraint system on the rear seat facing the rear of the vehicle.

**STEP 3**
Run the seat belt through the child restraint system and insert the plate into the buckle. Make sure that the belt is not twisted.
Fully extend the shoulder belt and allow it to retract to put it in lock mode. In lock mode, the belt cannot be extended.

While pushing the child restraint system down into the rear seat, allow the shoulder belt to retract until the child restraint system is securely in place.

After the shoulder belt has retracted to a point where there is no slack in the belt, pull the belt to check that it cannot be extended.

**Forward-facing — Convertible seat**

Fold the seatback while pulling the seatback angle adjustment lever. Return the seatback and secure it at the first lock position. (→P. 86)

Place the child restraint system on the seat facing the front of the vehicle.
Run the seat belt through the child restraint system and insert the plate into the buckle. Make sure that the belt is not twisted.

Fully extend the shoulder belt and allow it to retract to put it in lock mode. In lock mode, the belt cannot be extended.

While pushing the child restraint system into the rear seat, allow the shoulder belt to retract until the child restraint system is securely in place.

After the shoulder belt has retracted to a point where there is no slack in the belt, pull the belt to check that it cannot be extended.

If the child restraint has a top tether strap, the top tether strap should be latched onto the top tether strap anchor. (→P.160)
Before driving

■ Booster seat

Fold the seatback while pulling the seatback angle adjustment lever. Return the seatback and secure it at the first lock position. (→P. 86)

Place the child restraint system on the seat facing the front of the vehicle.

Sit the child in the child restraint system. Fit the seat belt to the child restraint system according to the manufacturer’s instructions and insert the plate into the buckle. Make sure that the belt is not twisted.

Check that the shoulder belt is correctly positioned over the child’s shoulder, and that the lap belt is as low as possible. (→P. 97)
Removing a child restraint installed with a seat belt

Press the buckle release button and fully retract the seat belt.

Child restraint systems with a top tether strap

Secure the child restraint system using a seat belt or the LATCH anchors, and remove the head restraint.

Open the anchor bracket cover, latch the hook onto the anchor bracket and tighten the top tether strap.

Make sure the top tether strap is securely latched.
Replace the head restraint and lift it up to the uppermost lock position.

**Laws and regulations pertaining to anchors**

The LATCH system conforms to FMVSS225 or CMVSS210.2. Child restraint systems conforming to FMVSS213 or CMVSS213 specifications can be used. This vehicle is designed to conform to the SAE J1819.

**CAUTION**

**When installing a booster seat**

To prevent the belt from going into ALR lock mode, do not fully extend the shoulder belt. ALR mode causes the belt to tighten only. This could cause injury or discomfort to the child. (→P. 100)
■ When installing a child restraint system

Follow the directions given in the child restraint system installation manual and fix the child restraint system securely in place.

If the child restraint system is not correctly fixed in place, the child or other passengers may be injured or even killed in the event of sudden braking, sudden swerving or an accident.

- If the driver’s seat interferes with the child restraint system and prevents it from being attached correctly, attach the child restraint system to the right-hand rear seat.

- Adjust the front passenger seat so that it does not interfere with the child restraint system.

- Only put a forward-facing child restraint system on the front seat when unavoidable. When installing a forward-facing child restraint system on the front passenger seat, move the seat as far back as possible even if the “AIR BAG OFF” indicator light is illuminated. Failure to do so may result in death or serious injury if the airbags deploy (inflate).

- When installing a child restraint system in the rear center seat, adjust both seat cushions to the same position and align both seatbacks at the same angle. The seatbacks must be adjusted to the same angle. Otherwise, the child restraint system cannot be securely restrained and this may cause death or serious injuries in the event of sudden braking, sudden swerving or an accident.

- When using the LATCH system, move the seat as far back as possible and adjust the seatback as upright as possible.

- When a booster seat is installed, always ensure that the shoulder belt is positioned across the center of the child’s shoulder. The belt should be kept away from the child’s neck, but not so that it could fall off the child’s shoulder. Failing to do so may result in death or serious injury in the event of sudden braking, sudden swerving or an accident.
When installing a child restraint system
- Ensure that the belt and tab are securely locked and the seat belt is not twisted.
- Push and pull the child restraint system from side to side and forward to be sure it is secure.
- After securing a child restraint system, never adjust the seat.
- Follow all installation instructions provided by the child restraint system manufacturer.

Do not use a seat belt extender
If a seat belt extender is used when installing a child restraint system, the seat belt will not securely hold the child restraint system, which could cause death or serious injury to the child or other passengers in the event of sudden braking, sudden swerving or an accident.

To correctly attach a child restraint system to the anchors
When using the LATCH anchors, be sure that there are no foreign objects around the anchors and that the seat belt is not caught behind the child restraint system. Make sure the child restraint system is securely attached, or it may cause death or serious injury to the child or other passengers in the event of a sudden stop, sudden swerve or accident.

The following procedures should be observed to ensure safe driving.

■ Starting the hybrid system
  → P. 176

■ Driving

  ▶ STEP 1  With the brake pedal depressed, shift the shift lever to D. (→ P. 182)
  ▶ STEP 2  Release the parking brake. (→ P. 192)
  ▶ STEP 3  Gradually release the brake pedal and gently depress the accelerator pedal to accelerate the vehicle.

■ Stopping

  ▶ STEP 1  With the shift lever in D, depress the brake pedal.
  ▶ STEP 2  If necessary, set the parking brake.
    If the vehicle is to be stopped for an extended period of time, shift the shift lever to P. (→ P. 182)

■ Parking the vehicle

  ▶ STEP 1  With the shift lever in D, depress the brake pedal.
  ▶ STEP 2  Set the parking brake. (→ P. 192)
  ▶ STEP 3  Shift the shift lever to P. (→ P. 182)
    If parking on a hill, block the wheels as needed.
  ▶ STEP 4  Press the “POWER” switch to stop the hybrid system.
  ▶ STEP 5  Lock the door, making sure that you have the electronic key on your person.

Starting off on a steep uphill

  ▶ STEP 1  Make sure that the parking brake is set and shift the shift lever to D.
  ▶ STEP 2  Gently depress the accelerator pedal.
  ▶ STEP 3  Release the parking brake.
Driving procedures

Driving in the rain
- Drive carefully when it is raining, because visibility will be reduced, the windows may become fogged-up, and the road will be slippery.
- Drive carefully when it starts to rain, because the road surface will be especially slippery.
- Refrain from high speeds when driving on an expressway in the rain, because there may be a layer of water between the tires and the road surface, preventing the steering and brakes from operating properly.

Breaking in your new Lexus
To extend the life of the vehicle, observing the following precautions is recommended:
- For the first 200 miles (300 km): Avoid sudden stops.
- For the first 500 miles (800 km): Do not tow a trailer.
- For the first 1000 miles (1600 km):
  - Do not drive at extremely high speeds.
  - Avoid sudden acceleration.
  - Do not drive continuously in low gears.
  - Do not drive at a constant speed for extended periods.

Drum-in-disc type parking brake system
Your vehicle has a drum-in-disc type parking brake system. This type of brake system needs bedding-down of the brake shoes periodically or whenever the parking brake shoes and/or drum are replaced. Have your Lexus dealer perform the bedding down operation.

Operating your vehicle in a foreign country
Comply with the relevant vehicle registration laws and confirm the availability of the correct fuel. (→P. 666)
For efficient use

- Shift the shift lever to D when driving.
  In the N position, the gasoline engine operates but electricity cannot be generated. The hybrid battery (traction battery) will discharge, requiring unnecessary engine power to recharge.

- Drive your vehicle smoothly.
  Avoid abrupt acceleration and deceleration. Gradual acceleration and deceleration will make more effective use of the electric motor (traction motor) without having to use gasoline engine power.

- Avoid repeated acceleration.
  Repeated acceleration consumes hybrid battery (traction battery) power, resulting in poor acceleration. Battery power can be restored by driving with the accelerator pedal slightly released.

- Shift the shift lever to P when parking.
  In the N position, the hybrid battery (traction battery) does not recharge. Leaving the shift lever in the N position for an extended period of time may discharge the hybrid battery. The vehicle cannot run if the hybrid battery is discharged.

Eco-friendly driving

During Eco-friendly acceleration (Eco driving), Eco Driving Indicator Light will turn on. If the accelerator pedal is depressed more than necessary, the indicator will turn off. (→P. 196)

Customization

Setting of Eco Driving Indicator Light can be changed. (Customizable features →P. 693)
When driving procedures

When starting the vehicle

Always keep your foot on the brake pedal while stopped with the hybrid system operating. This prevents the vehicle from creeping.

When driving the vehicle

- Do not drive if you are unfamiliar with the location of the brake and accelerator pedals to avoid depressing the wrong pedal.
  - Accidentally depressing the accelerator pedal instead of the brake pedal will result in sudden acceleration that may lead to an accident that could result in death or serious injury.
  - When backing up, you may twist your body around, leading to a difficulty in operating the pedals. Make sure to operate the pedals properly.
  - Make sure to keep a correct driving posture even when moving the vehicle only slightly. This allows you to depress the brake and accelerator pedals properly.
  - Depress the brake pedal using your right foot. Depressing the brake pedal using your left foot may delay response in an emergency, resulting in an accident.
- The driver should pay extra attention to pedestrians when the vehicle is powered only by the electric motor (traction motor). Because there is no engine noise, the pedestrians may misjudge the vehicle’s movement.
- Do not drive the vehicle over or stop the vehicle near flammable materials. The exhaust system and exhaust gases can be extremely hot. These hot parts may cause a fire if there is any flammable material nearby.
- Do not let the vehicle roll backward while the shift lever is in a driving position, or roll forward while the shift lever is in R. Doing so may result in an accident or damage to the vehicle.
- If the smell of exhaust is noticed inside the vehicle, open the windows and check that the back door is closed. Large amounts of exhaust in the vehicle can cause driver drowsiness and an accident, resulting in death or a serious health hazard. Have the vehicle inspected by your Lexus dealer immediately.
### CAUTION

- Do not shift the shift lever to P while the vehicle is moving. Doing so can damage the transmission and may result in a loss of vehicle control.
- Do not shift the shift lever to R while the vehicle is moving forward. Doing so can damage the transmission and may result in a loss of vehicle control.
- Do not shift the shift lever to D while the vehicle is moving backward. Doing so can damage the transmission and may result in a loss of vehicle control.
- Moving the shift lever to N while the vehicle is moving will disengage the hybrid system. Engine braking is not available with the hybrid system disengaged.
- During normal driving, do not turn off the hybrid system. Turning the hybrid system off while driving will not cause loss of steering or braking control, but the power assist to these systems will be lost. This will make it more difficult to steer and brake, so you should pull over and stop the vehicle as soon as it is safe to do so. However, in the event of an emergency, such as if it becomes impossible to stop the vehicle in the normal way: →P. 661
- Use engine braking (downshift) to maintain a safe speed when driving down a steep hill. Using the brakes continuously may cause the brakes to overheat and lose effectiveness. (→P. 182)
- When stopped on an incline, use the brake pedal and parking brake to prevent the vehicle from rolling backward or forward, causing an accident.
- Do not adjust the position of the steering wheel, the seat, or the inside or outside rear view mirrors while driving. Doing so may result in a loss of vehicle control that can cause accidents, resulting in death or serious injury.
- Always check that all passengers’ arms, heads or other parts of their body are not outside the vehicle, as this may result in death or serious injury.
When driving

CAUTION

- Do not drive in excess of the speed limit. Even if the legal speed limit permits it, do not drive over 85 mph (140 km/h) unless your vehicle has high-speed capability tires. Driving over 85 mph (140 km/h) may result in tire failure, loss of control and possible injury. Be sure to consult a tire dealer to determine whether the tires on your vehicle are high-speed capability tires or not before driving at such speeds.

- On vehicles with an electronically modulated air suspension, if you drive through water, such as when crossing shallow streams, first check the depth of the water and the firmness of the river bed. Put the vehicle in “HI” (high) mode with the height selector switch and then turn off the electronically modulated air suspension by pressing the height control off switch. Drive your vehicle at 19 mph (30 km/h) or lower.

When driving on slippery road surfaces

- Sudden braking, acceleration and steering may cause tire slippage and reduce your ability to control the vehicle, resulting in an accident.

- Sudden changes in engine speed, such as engine braking caused by up-shifting and down-shifting, may cause the vehicle to skid, resulting in an accident.

- After driving through a puddle, lightly depress the brake pedal to make sure that the brakes are functioning properly. Wet brake pads may prevent the brakes from functioning properly. If the brakes on only one side are wet and not functioning properly, steering control may be affected, resulting in an accident.

When shifting the shift lever

Be careful not to shift the shift lever with the accelerator pedal depressed. This may lead to unexpected rapid acceleration of the vehicle that may cause an accident and result in death or serious injury.

If you hear a squealing or scraping noise (brake pad wear limit indicators)

Have your Lexus dealer check and replace the brake pads as soon as possible. The rotor damage can result if the pads are not replaced when needed.

It is dangerous to drive the vehicle when the wear limits of the brake pads and/or those of the brake discs are exceeded.
2-1. Driving procedures

![CAUTION]

- **When the vehicle is stopped**
  - Do not depress the accelerator pedal unnecessarily. 
    If the vehicle is in any gear other than P or N, the vehicle may accelerate suddenly and unexpectedly, causing an accident.
  - Do not leave the vehicle with the hybrid system on for a long time. 
    If such a situation cannot be avoided, park the vehicle in an open space and check that exhaust fumes do not enter the vehicle interior.
  - In order to prevent accidents due to the vehicle rolling away, always keep depressing the brake pedal while the “READY” indicator is on. Apply the parking brake as necessary.
  - If the vehicle is stopped on an incline, in order to prevent accidents caused by the vehicle rolling forward or backward, always depress the brake pedal and securely apply the parking brake as needed.
  - Avoid revving or racing the engine.
    Running the engine at high speed while the vehicle is stopped may cause the exhaust system to overheat, which could result in a fire if combustible material is nearby.

- **When the vehicle is parked**
  - Do not leave glasses, cigarette lighters, spray cans, or soft drink cans in the vehicle when it is in the sun.
    Doing so may result in the following:
    - Gas may leak from a cigarette lighter or spray can, and may lead to a fire.
    - The temperature inside the vehicle may cause the plastic lenses and plastic material of glasses to deform or crack.
    - Soft drink cans may fracture, causing the contents to spray over the interior of the vehicle, and may also cause a short circuit in the vehicle’s electrical components.
  - Do not leave cigarette lighters in the vehicle. If a cigarette lighter is in a place such as the glove box or on the floor, it may be lit accidentally when luggage is loaded or the seat is adjusted, causing a fire.
  - Do not attach adhesive discs to the windshield or windows. Do not place containers such as air fresheners on the instrument panel or dashboard. Adhesive discs or containers may act as lenses, causing a fire in the vehicle.
2-1. Driving procedures

CAUTION

- Do not leave a door or window open if the curved glass is coated with a metalized film such as a silver-colored one. Reflected sunlight may cause the glass to act as a lens, causing a fire.

- Always apply the parking brake, shift the shift lever to P, stop the hybrid system and lock the vehicle. Do not leave the vehicle unattended while the hybrid system is operating.

- Do not touch the exhaust pipes while the hybrid system is operating or immediately after turning the hybrid system off. Doing so may cause burns.

- Do not leave the hybrid system operating in an area with snow build-up, or where it is snowing. If snowbanks build up around the vehicle while the hybrid system is operating, exhaust gases may collect and enter the vehicle. This may lead to death or a serious health hazard.

Exhaust gases

Exhaust gases include harmful carbon monoxide (CO) that is colorless and odorless. Inhaling exhaust gases may lead to death or a serious health hazard.

- If the vehicle is in a poorly ventilated area, stop the hybrid system. In a closed area, such as a garage, exhaust gases may collect and enter the vehicle. This may lead to death or a serious health hazard.

- The exhaust system should be checked occasionally. If there is a hole or crack caused by corrosion, damage to a joint or abnormal exhaust noise, be sure to have the vehicle inspected and repaired by your Lexus dealer. Failure to do so may allow exhaust gases to enter the vehicle, resulting in death or a serious health hazard.

When taking a nap in the vehicle

Always turn the hybrid system off. Otherwise, if you accidentally move the shift lever or depress the accelerator pedal, this could cause an accident or fire due to hybrid system overheating. Additionally, if the vehicle is parked in a poorly ventilated area, exhaust gases may collect and enter the vehicle, leading to death or a serious health hazard.
CAUTION

■ When braking the vehicle

● When the brakes are wet, drive more cautiously.
  Braking distance increases when the brakes are wet, and this may cause one side of the vehicle to brake differently than the other side. Also, the parking brake may not securely hold the vehicle.

● If the power brake assist function does not operate, do not follow other vehicles closely and avoid hills or sharp turns that require braking.
  In this case, braking is still possible, but the brake pedal should be depressed more firmly than usual. Also, the braking distance will increase.

● The brake system consists of 3 individual hydraulic systems; if one of the systems fails, the others will still operate. In this case, the brake pedal should be depressed more firmly than usual and the braking distance will increase. If this happens, do not continue to drive the vehicle. If the brake system warning light (red indicator) comes on together with the buzzer sound while driving, immediately stop the vehicle in a safe place and contact your Lexus dealer.

■ If the vehicle becomes stuck

Do not spin the wheels excessively when any of the tires is up in the air, or the vehicle is stuck in sand, mud, etc. This may damage the driveline components or propel the vehicle forward or backward, causing an accident.

NOTICE

■ When driving the vehicle

● Do not depress the accelerator and brake pedals at the same time during driving, as this may restrain driving torque.

● Do not use the accelerator pedal or depress the accelerator and brake pedals at the same time to hold the vehicle on a hill.

■ When parking the vehicle

Always shift the shift lever to P. Failure to do so may cause the vehicle to move or the vehicle may accelerate suddenly if the accelerator pedal is accidentally depressed.
2-1. Driving procedures

\[\text{NOTICE}\]

**Avoiding damage to vehicle parts**
- Do not turn the steering wheel fully in either direction and hold it there for an extended period of time. Doing so may damage the power steering motor.
- When driving over bumps in the road, drive as slowly as possible to avoid damaging the wheels, underside of the vehicle, etc.

**If you get a flat tire while driving**
A flat or damaged tire may cause the following situations. Hold the steering wheel firmly and gradually depress the brake pedal to slow down the vehicle.
- It may be difficult to control your vehicle.
- The vehicle will make abnormal sounds.
- The vehicle will behave abnormally.

Information on what to do in case of a flat tire (→P. 629)

**When encountering flooded roads**
Do not drive on a road that has flooded after heavy rain etc. Doing so may cause the following serious damage to the vehicle:
- Engine stalling
- Short in electrical components
- Engine damage caused by water immersion

In the event that you drive on a flooded road and the vehicle is flooded, be sure to have your Lexus dealer check the following:
- Brake function
- Changes in quantity and quality of oil and fluid used for the engine, hybrid transmission, etc., and, for AWD models, the rear electric motor (traction motor).
- Lubricant condition for the bearings and suspension joints (where possible) and the function of all joints, bearings, etc.
Performing the following operations when carrying the electronic key on your person starts the hybrid system or changes “POWER” switch modes.

**Starting the hybrid system**

1. **STEP 1** Check that the parking brake is set.
2. **STEP 2** Check that the shift lever is set in P.
3. **STEP 3** Firmly depress the brake pedal.
   
   The “POWER” switch indicator will turn green. If the indicator does not turn green, the hybrid system cannot be started.

4. **STEP 4** Press the “POWER” switch.
   
   After a while, the “READY” indicator comes on with a beep sound.

   The vehicle can move when the “READY” indicator is on even if the engine is stopped.

   Continue depressing the brake pedal until the hybrid system is completely started.

   The hybrid system can be started from any “POWER” switch mode.

5. **STEP 5** Check that the “READY” indicator is on.
   
   The vehicle will not move when the “READY” indicator is off.
■ Stopping the hybrid system

**STEP 1** Stop the vehicle.

**STEP 2** Shift the shift lever to P.

**STEP 3** Set the parking brake. (→P. 192)

**STEP 4** Press the “POWER” switch.

**STEP 5** Release the brake pedal and check that the indicator on the “POWER” switch is off.

■ Changing “POWER” switch modes

Modes can be changed by pressing the “POWER” switch with the brake pedal released. (The mode changes each time the switch is pressed.)

1. **Off***
   - The emergency flashers can be used.

2. **ACCESSORY mode**
   - Some electrical components such as the audio system can be used.
   - The “POWER” switch indicator turns amber.

3. **ON mode**
   - All electrical components can be used.
   - The “POWER” switch indicator turns amber.

*: If the shift lever is in a position other than P when turning off the hybrid system, the “POWER” switch will be turned to ACCESSORY mode, not to off.
When stopping the hybrid system with the shift lever in a position other than P

If the hybrid system is stopped with the shift lever in a position other than P, the “POWER” switch will not be turned off but instead be turned to ACCESSORY mode. Perform the following procedure to turn the switch off:

**STEP 1** Check that the parking brake is set.
**STEP 2** Shift the shift lever to P.
**STEP 3** Check that the indicator on the “POWER” switch is illuminated in amber and then press the “POWER” switch once.
**STEP 4** Check that the indicator on the “POWER” switch is off.

■ Auto power off function

When the shift lever is in P, if the vehicle is left in ACCESSORY or ON mode with the hybrid system not operating for more than 20 minutes (ACCESSORY mode) or one hour (ON mode), the “POWER” switch will automatically turn off. However, this function cannot entirely prevent 12-volt battery discharge. Do not leave the vehicle with the “POWER” switch in ACCESSORY or ON mode for long periods of time when the hybrid system is not operating.

■ Operation of the “POWER” switch

When operating the “POWER” switch, one short, firm press is enough. If the switch is pressed improperly, the hybrid system may not start or the “POWER” switch mode may not change. It is not necessary to press and hold the switch.

■ Sounds and vibrations specific to a hybrid vehicle

→ P. 33

■ Electronic key battery depletion

→ P. 58

■ When the ambient temperature is low, such as during winter driving conditions

It may take time until the “READY” indicator comes on.

■ Conditions affecting operation

→ P. 57
■ Note for the entry function
  →P. 59

■ If the hybrid system does not start
  The immobilizer system may not have been deactivated. (→P. 124)

■ Steering lock
  After turning the “POWER” switch off and opening and closing the doors, the steering wheel will be locked due to the steering lock function. Operating the “POWER” switch again automatically cancels the steering lock.

■ When the steering lock cannot be released
  The green indicator light on the “POWER” switch will flash and a message will be shown on the multi-information display. Press the “POWER” switch again while turning the steering wheel left and right.

■ Steering lock motor overheating prevention
  To prevent the steering lock motor from overheating, the motor may be suspended if the hybrid system is turned on and off repeatedly in a short period of time. In this case, refrain from operating the hybrid system. After about 2 seconds, the steering lock motor will resume functioning.

■ When the “POWER” switch indicator flashes in amber
  The system may be malfunctioning. Have the vehicle inspected by your Lexus dealer immediately.

■ If the “READY” indicator does not come on
  If the “READY” indicator does not come on when you press the “POWER” switch with the shift lever in P and the brake pedal depressed, contact your Lexus dealer immediately.

■ If the hybrid system is malfunctioning
  →P. 609

■ If the electronic key battery is depleted
  →P. 550
**CAUTION**

**When starting the hybrid system**
Always start the hybrid system while sitting in the driver’s seat. Do not depress the accelerator pedal while starting the hybrid system under any circumstances. Doing so may cause an accident resulting in death or serious injury.

**Caution while driving**
If a hybrid system failure occurs while the vehicle is moving, do not lock or open the doors until the vehicle reaches a safe and complete stop. Activation of the steering lock in this circumstance may lead to an accident, resulting in death or serious injury.

**Stopping the hybrid system in an emergency**
If you want to stop the hybrid system in an emergency while driving the vehicle, press and hold the “POWER” switch for more than 3 seconds. However, do not touch the “POWER” switch while driving except in an emergency. Turning the hybrid system off while driving will not cause loss of steering or braking control, but the power assist to these systems will be lost. This will make it more difficult to steer and brake, so you should pull over and stop the vehicle as soon as it is safe to do so.

**NOTICE**

**To prevent 12-volt battery discharge**
- Do not leave the “POWER” switch in ACCESSORY or ON mode for long periods of time without the hybrid system on.
- If the indicator on the “POWER” switch is illuminated, the “POWER” switch is not off. When exiting the vehicle, always check that the “POWER” switch is off.
- Do not stop the hybrid system when the shift lever is in a position other than P. If the hybrid system is stopped in another shift lever position, the “POWER” switch will not be turned off but instead be turned to ACCESSORY mode. If the vehicle is left in ACCESSORY mode, 12-volt battery discharge may occur.
NOTICE

■ When starting the hybrid system
  Do not depress the accelerator pedal unnecessarily.

■ Symptoms indicating a malfunction with the “POWER” switch
  If the “POWER” switch seems to be operating somewhat differently than usual, such as the switch sticking slightly, there may be a malfunction. Contact your Lexus dealer immediately.
Select a shift position appropriate for the driving conditions.

- Shifting the shift lever

While the “POWER” switch is in ON mode, depress the brake pedal and move the shift lever.

When shifting the shift lever between P and D, make sure that the vehicle is completely stopped.

- Shift position purpose

<table>
<thead>
<tr>
<th>Shift position</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>P</td>
<td>Parking the vehicle/starting the hybrid system</td>

</tr>
<tr>
<td>D</td>
<td>Normal driving *1</td>
</tr>
<tr>
<td>S</td>
<td>S mode driving *2 (→ P.186)</td>
</tr>
</tbody>
</table>

*1: Shifting to the D position allows the system to select a gear suitable for the driving conditions. Setting the shift lever to the D position is recommended for normal driving.

*2: Selecting shift ranges using S mode controls engine braking forces.
Selecting Eco drive mode

When the vehicle is driven in Eco drive mode, vehicle driving force and operation of the air conditioning system (heating/cooling) is controlled to improve fuel efficiency.

1. Press the menu switch.

   The multi-information display will change modes to electronic features control mode.

2. Press the “ENTER” switch upwards or downwards until “ECO MODE” appears.

   Press the “ENTER” switch to change to “ON”.

   The “ECO MODE” indicator will be displayed.

   Each pressing of the switch turns Eco drive mode on and off.

   Press the menu switch to change to the normal display.
Selecting snow mode

Use snow mode for accelerating and driving on slippery road surfaces such as snow.

1. Press the menu switch.
   - The multi-information display will change modes to electronic features control mode.

2. Press the “ENTER” switch upwards or downwards until “HYBRID SNOW” appears.

Press the “ENTER” switch to change to “ON”.
- The “Hybrid SNOW” indicator will be displayed.
- Each pressing of the switch turns snow mode on and off.

Press the menu switch to change to the normal display.
■ Selecting EV drive mode

In EV drive mode, the electric motor (traction motor), powered by the hybrid battery (traction battery), is used to drive the vehicle.

This mode allows you to drive in residential areas late at night or in indoor parking lots etc. without concern for noises and exhaust gas emissions.

1 Press the menu switch.

The multi-information display will change modes to electronic features control mode.

When the menu switch is pressed within 10 seconds of the hybrid system being started, “EV” will be the first mode displayed.

2 Press the “ENTER” switch upwards or downwards until “EV” appears.

Press the “ENTER” switch to change to “ON”.

The EV drive mode indicator will be displayed.

Each pressing of the switch turns EV drive mode on and off.

Press the menu switch to change to the normal display.
Changing shift ranges in S mode

When the shift lever is in the S position, the shift lever can be operated as follows:

1. For upshifting
2. For downshifting

The initial shift range in S mode is set automatically to “5” or “4” according to vehicle speed.

- **Shift ranges and their functions**
  - You can choose from 6 levels of engine braking force.
  - A lower shift range will provide greater engine braking force than a higher shift range, and the engine speed will also increase.
Operation of the air conditioning system in Eco drive mode
Eco drive mode controls the heating/cooling operations and fan speed of the air conditioning system to enhance fuel efficiency. (→P. 322) To improve air conditioning performance, adjust the fan speed or turn off Eco drive mode.

Automatic return to normal driving mode
If snow mode or EV drive mode is selected, the driving mode will automatically return to normal mode when the hybrid system is turned off.

S mode
- When the shift range is “5” or lower, holding the shift lever toward “+” sets the shift range to “6”.
- To prevent the engine from over-revving, upshifting may automatically occur.

AI-SHIFT
AI-SHIFT automatically selects the optimal gear according to driver performance and driving conditions.
AI-SHIFT automatically operates when the shift lever is in the D position. (Shifting the shift lever to the S position cancels the function.)
The engine speed may remain high after releasing the accelerator pedal. This does not indicate a malfunction.

When driving with the cruise control or dynamic radar cruise control
Engine braking will not occur in S mode, even when downshifting to “5” or “4”. (→P. 238, 243)

If the shift lever cannot be shifted from P
→P. 645

If S does not come on even after shifting the shift lever to S
This may indicate a malfunction in the hybrid transmission system. Have the vehicle inspected by your Lexus dealer immediately.
(In this situation, the hybrid transmission will operate in the same as manner as when the shift lever is in D.)

Downshift restriction warning buzzer (S mode)
To help ensure safety and driving performance, downshifting operation may sometimes be restricted. In some circumstances, downshifting may not be possible even when the shift lever is operated. (The buzzer will sound twice.)
- **Situations in which EV drive mode cannot be turned on**
  It may not be possible to turn EV drive mode on in the following situations. If it cannot be turned on, a buzzer will sound and a message will be shown on the multi-information display.
  - The temperature of the hybrid system is high.
    The vehicle has been left in the sun, driven on a hill, driven at high speeds, etc.
  - The temperature of the hybrid system is low.
    The vehicle has been left in extremely low temperatures for a long period of time etc.
  - The gasoline engine is warming up.
  - The hybrid battery (traction battery) is low.
  - Vehicle speed is about 25 mph (40 km/h) or more.
  - The accelerator pedal is depressed firmly or the vehicle is on a hill etc.
  - The windshield defogger is in use.

- **Automatic cancelation of EV drive mode**
  When driving in EV drive mode, the gasoline engine may automatically restart in the following situations. When EV drive mode is canceled, a buzzer will sound and the EV drive mode indicator will flash and go off.
  - The hybrid battery (traction battery) becomes low.
  - Vehicle speed becomes more than about 25 mph (40 km/h).
  - The accelerator pedal is depressed firmly or the vehicle is on a hill etc.

- **Possible driving distance when driving in EV drive mode**
  In EV drive mode, it is possible to drive up about 0.5 mile (1 km) if driving at a speed of about 25 mph (40 km/h) or less. (The distance that is possible depends on the hybrid battery [traction battery] level and driving conditions.)

- **Fuel economy**
  RX450h is designed to achieve the best possible fuel economy during normal driving (using the gasoline engine and electric motor [traction motor]). Driving in EV drive mode more than necessary may lower fuel economy.
- **When driving on slippery road surfaces**
  Do not accelerate or shift gears suddenly.
  Sudden changes in engine braking may cause the vehicle to spin or skid, resulting in an accident.

- **Caution while driving**
  When driving in EV drive mode, pay special attention to the area around the vehicle. Because there is no engine noise, pedestrians, people riding bicycles or other people and vehicles in the area may not be aware of the vehicle starting off or approaching them, so take extra care while driving.

---

- **NOTICE**

- **Hybrid battery (traction battery) charge precaution**
  If the shift lever is in N, the hybrid battery (traction battery) will not be charged even when the engine is running. Therefore, if the vehicle is left with the shift lever in N for a long period of time, the hybrid battery (traction battery) will discharge, and this may result in the vehicle not being able to start.
The turn signal lever can be used to show the following intention of the driver:

**Type A**

1. Right turn
2. Left turn
3. Lane change to the right (push and hold the lever part-way)
   - The right hand signals will flash until you release the lever.
4. Lane change to the left (push and hold the lever partway)
   - The left hand signals will flash until you release the lever.
**Type B**

1. **Right turn**
2. **Left turn**
3. **Lane change to the right** (push and hold the lever partway)
   - The right hand signals will flash until you release the lever.
4. **Lane change to the left** (push and hold the lever partway)
   - The left hand signals will flash until you release the lever.

---

- **Turn signals can be operated when**
  - The “POWER” switch is in ON mode.
- **If the indicators flash faster than usual**
  - Check that a light bulb in the front or rear turn signal lights has not burned out.
2-1. Driving procedures
Parking brake

To set the parking brake, fully depress the parking brake pedal with your left foot while depressing the brake pedal with your right foot. (Depressing the pedal again releases the parking brake.)

- **Usage in winter time**
  See “Winter driving tips” for parking brake usage in winter time. (→P. 296)

| NOTICE |

- **Before driving**
  Fully release the parking brake. Driving the vehicle with the parking brake set will lead to brake components overheating, which may affect braking performance and increase brake wear.
To sound the horn, press on or close to the mark.
2-2. Instrument cluster

Gauges and meters

1. Hybrid System Indicator
   Displays hybrid system power output and regenerative charging level

2. Multi-information display
   → P. 202

3. Speedometer
   Displays the vehicle speed

4. Fuel gauge
   Displays the quantity of fuel remaining in the tank

5. Odometer and trip meter
   Odometer: Displays the total distance the vehicle has been driven
   Trip meter: Displays the distance the vehicle has been driven since the meter was last reset. Trip meters “A” and “B” can be used to record and display different distances independently.

6. Shift position and shift range display
   → P. 182

7. Engine coolant temperature gauge
   Displays the engine coolant temperature
Changing the display

Switches between odometer and trip meter displays. When the trip meter is displayed, pressing and holding the button will reset the trip meter.

Instrument panel light control

The brightness of the instrument panel lights can be adjusted.

1. Darker
2. Brighter
The meters and display illuminate when
The “POWER” switch is in ON mode.

Hybrid System Indicator

1. Eco Driving Indicator Light
   During Eco-friendly acceleration (Eco driving), Eco Driving Indicator Light will turn on.
   Eco Driving Indicator Light will not operate in the following conditions:
   - The shift lever is in anything other than D.
   - The driving mode is set to snow mode or EV drive mode. (→ P. 184, 185)
   - The vehicle speed is approximately 80 mph (130 km/h) or higher.

2. Power area
   Shows that an Eco-friendly driving range is being exceeded (during full power driving etc.)

3. Eco area
   Shows that the vehicle is being driven in an Eco-friendly manner.

4. Hybrid Eco area
   Shows that gasoline engine power is not being used very often.
   The gasoline engine will automatically stop and restart under various conditions.

5. Charge area
   Shows that energy is being recovered via regenerative braking.
By keeping the indicator within Eco area, more Eco-friendly driving can be achieved.

Charge area indicates regeneration* status. Regenerated energy will be used to charge the hybrid battery (traction battery).

*: When used in this manual, “regeneration” refers to the conversion of energy created by the movement of the vehicle into electrical energy.

---

**NOTICE**

- **To prevent damage to the engine and its components**
  The engine may be overheating if the engine coolant temperature gauge is in the red zone (H). In this case, immediately stop the vehicle in a safe place, and check the engine after it has cooled completely. (→P. 655)
The indicator and warning lights on the instrument cluster and center panel inform the driver of the status of the vehicle’s various systems.

► Instrument cluster

► Center panel (without a navigation system)
Center panel (with a navigation system)

Indicators
The indicators inform the driver of the operating state of the vehicle’s various systems.

- Turn signal indicator (→ P. 190)
- Headlight high beam indicator (→ P. 216)
- Automatic High Beam indicator (→ P. 219)
- Headlight indicator (→ P. 213)
- Tail light indicator (→ P. 213)
- Intuitive parking assist indicator (→ P. 257)
- “AFS OFF” indicator (→ P. 216)
- Slip indicator (→ P. 275, 280)
- VSC off indicator (→ P. 276)
- “ECO MODE” indicator (→ P. 183)
2-2. Instrument cluster

*1: These lights turn on when the “POWER” switch is turned to the ON mode to indicate that a system check is being performed. They will turn off after the hybrid system is on, or after a few seconds. There may be a malfunction in a system if a light does not come on, or if the lights do not turn off. Have the vehicle inspected by your Lexus dealer.

*2: The light flashes to indicate that the system is operating.
### Warning lights

Warning lights inform the driver of malfunctions in any of the vehicle’s systems. (→P. 598)

*1: These lights turn on when the “POWER” switch is turned to ON mode to indicate that a system check is being performed. They will turn off after the hybrid system is on, or after a few seconds. There may be a malfunction in a system if a light does not come on, or if the lights do not turn off. Have the vehicle inspected by your Lexus dealer.

*2: The light flashes to indicate a malfunction.

### CAUTION

#### If a safety system warning light does not come on

Should a safety system light such as the ABS and SRS warning light not come on when you start the hybrid system, this could mean that these systems are not available to help protect you in an accident, which could result in death or serious injury. Have the vehicle inspected by your Lexus dealer immediately if this occurs.
The multi-information display presents the driver with a variety of driving-related data including the current outside air temperature.

### Multi-information switches

1. **Menu switch**
   - Changes modes to electronic features control mode, customization mode or back to normal display mode

2. **“ENTER” switch**
   - Changes trip information items. This switch is also used to turn on/off electronic features controls and to change customization settings.

Trip information

■ Energy monitor
  Displays the status of the hybrid system (→ P. 40)

■ Current fuel consumption
  Displays the current rate of fuel consumption

■ Average fuel consumption after refueling
  Displays the average fuel consumption since the vehicle was last refueled
  Use the displayed average fuel consumption as a reference.

■ Average fuel consumption
  Displays the average fuel consumption since the function was reset
  • The function can be reset by pushing the “ENTER” switch for longer than one second when the average fuel consumption is displayed.
  • Use the displayed average fuel consumption as a reference.

■ Average vehicle speed
  Displays the average vehicle speed since the function was reset
  The function can be reset by pushing the “ENTER” switch for longer than one second when the average vehicle speed is displayed.

■ Cruising range
  Displays the estimated maximum distance that can be driven with the quantity of fuel remaining
  • This distance is computed based on your average fuel consumption. As a result, the actual distance that can be driven may differ from that displayed.
  • When only a small amount of fuel is added to the tank, the display may not be updated.
  When refueling, turn the “POWER” switch off. If the vehicle is refueled without turning the “POWER” switch off, the display may not be updated.
■ Tire inflation pressure
Displays inflation pressure of each tire. There is no correlation between the order of the displayed values and the tire positions.

If the inflation pressure of any tire drops a certain amount below the tire inflation pressure value currently memorized in the system, the displayed values will be highlighted.

It may take a few minutes to display the tire inflation pressure after the “POWER” switch is turned to ON mode. It may also take a few minutes to display the tire inflation pressure after inflation pressure has been adjusted.

If the tire pressure warning light is on or flashing, a message describing the situation will be displayed.

■ Electronic features control can be turned on/off when
The “POWER” switch is in ON mode.

■ Conditions for ending electronic features control
In the following situations, the electronic features control will end:
  ● The menu switch is pressed
  ● The dynamic radar cruise control is operated
  ● Intuitive parking assist starts operating
  ● No action is performed for some time after the electronic features control screen is displayed
  ● A warning message appears after the electronic features control screen is displayed

■ Outside temperature display
In the following situations, the correct outside temperature may not be displayed, or the display may take longer than normal to change.
  ● When stopped, or driving at low speeds (less than 15 mph [25 km/h])
  ● When the outside temperature has changed suddenly (at the entrance/exit of a garage, tunnel, etc.)

■ The multi-information display at low temperatures
Allow the interior of the vehicle to warm up before using the liquid crystal information display. At extremely low temperatures, the information display monitor may respond slowly, and display changes may be delayed.
■ Customization

Settings (e.g. available languages) can be changed.
(Customizable features → P. 693)

⚠️ CAUTION

■ Caution while driving

When operating the electronic features control while driving, take extra notice of the vehicle's surrounding area.
The head-up display can be used to project vehicle speed and other information onto the windshield.

1. Head-up display
   Display brightness will change automatically according to the brightness of the surrounding area.

2. Head-up display main switch

3. Display contrast adjustment switch
   Display brightness can be adjusted to the desired level.

4. Display position adjustment switch

*: If equipped
■ Head-up display contents

In addition to vehicle speed, the following information will be displayed:

1. **Audio display**
   Displays audio information for approximately 3 seconds when the audio system is operated

2. **Dynamic radar cruise control (if equipped)**
   Displays the approach warning message (→P. 614)

3. **Turn-by-turn navigation***
   Displays a notification of upcoming intersections during navigation system route guidance

4. **Vehicle speed display**

*: Refer to “Navigation System Owner’s Manual”.
Head-up display main switch

Pressing the switch turns the head-up display on/off and changes the vehicle speed display units as follows:

- Vehicles sold in the U.S.A.
  OFF $\rightarrow$ ON (mph) $\rightarrow$ ON (km/h) $\rightarrow$ OFF

- Except vehicles sold in the U.S.A.
  OFF $\rightarrow$ ON (km/h) $\rightarrow$ ON (mph) $\rightarrow$ OFF

Display adjustment

- Adjusting display contrast
  1 Brighter
  2 Darker

- Adjusting display position
  1 Higher
  2 Lower
Display customization

The audio mode display can be shown or hidden.

Pressing and holding the head-up display main switch for more than 2 seconds changes the display to audio display on/off mode. Press the head-up display main switch to turn the audio display on/off.

Customization can be performed when the head-up display is on and the vehicle is traveling at less than 5 mph (8 km/h).

Brightness of the head-up display

The headlight control sensor detects the brightness of the area surrounding the head-up display and adjusts the brightness accordingly. (→P. 217)

Head-up display

The head-up display may seem dark and hard to see when viewed through sunglasses, especially polarized sunglasses. Adjust the brightness of the head-up display or remove your sunglasses.

CAUTION

Before using the head-up display

Check that the position and brightness of the head-up display image does not interfere with safe driving. Incorrect adjustment of the image’s position or brightness may obstruct the driver’s view and lead to an accident, resulting in death or serious injury.
<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>To prevent damage to components</strong></td>
</tr>
<tr>
<td>- Do not place anything on the head-up display opening.</td>
</tr>
<tr>
<td>- If an object falls into the opening of the head-up display, remove it immediately. Also, avoid spilling water or other liquids near the head-up display opening as this may cause mechanical damage.</td>
</tr>
</tbody>
</table>
When driving

2-3. Operating the lights and windshield wipers

Headlight switch

The headlights can be operated manually or automatically.

▸ Type A

1. **AUTO**
   - The headlights and side marker, parking, tail, license plate, daytime running lights and instrument panel lights turn on and off automatically (when the “POWER” switch is in ON mode).

2. **Dip**
   - The side marker, parking, tail, license plate, daytime running lights and instrument panel lights turn on.

3. **High beam**
   - The headlights and all the lights listed above (except daytime running lights) turn on.

4. **DRL OFF**
   - The daytime running lights turn off.
2-3. Operating the lights and windshield wipers

Type B

1 **AUTO**  The headlights and side marker, parking, tail, license plate, daytime running lights and instrument panel lights turn on and off automatically (when the “POWER” switch is in ON mode).

2  The side marker, parking, tail, license plate, daytime running lights and instrument panel lights turn on.

3  The headlights and all the lights listed above (except daytime running lights) turn on.

4  The daytime running lights turn off.
When driving Type C

1. The daytime running lights turn on.
2. The headlights and side marker, parking, tail, license plate, daytime running lights and instrument panel lights turn on and off automatically (when the “POWER” switch is in ON mode).
3. The side marker, parking, tail, license plate, daytime running lights and instrument panel lights turn on.
4. The headlights and all the lights listed above (except daytime running lights) turn on.
2-3. Operating the lights and windshield wipers

Turning on the high beam headlights

1. With the headlights on, push the lever away from you to turn on the high beams.
   When the light switch is in position, the Automatic High Beam system will be activated.
   (→P. 219)
   Pull the lever toward you to the center position to turn the high beams off.

2. Pull the lever toward you to turn on the high beams.
   Release the lever to turn them off. You can flash the high beams with the headlights on or off.

AFS (Adaptive Front-lighting System) (if equipped)

AFS (Adaptive Front-lighting System) improves visibility at intersections and on curves by automatically adjusting the direction of the light axis of the headlights according to vehicle speed and the degree of the tire angle that are controlled by steering input.

AFS operates at speeds of 6 mph (10 km/h) or higher.

Deactivating AFS

1. Press the menu switch.
   The multi-information display will change modes to electronic features control mode.

2. Press the “ENTER” switch upwards or downwards until AFS appears.
2-3. Operating the lights and windshield wipers

Press the “ENTER” switch to change to “OFF”. The “AFS OFF” indicator will be displayed.

Each pressing of the switch turns “AFS” on and off.

Press the menu switch to change to the normal display.

### Daytime running light system

- To make your vehicle more visible to other drivers, the daytime running lights turn on automatically whenever the hybrid system is started and the parking brake is released. Daytime running lights are not designed for use at night. For the U.S.A.: Daytime running lights can be turned off by operating the switch.

- Compared to turning on the headlights, the daytime running light system offers greater durability and consumes less electricity, so it can help improve fuel economy.

### Headlight control sensor

The sensor may not function properly if an object is placed on the sensor, or anything that blocks the sensor is affixed to the windshield. Doing so interferes with the sensor detecting the level of ambient light and may cause the automatic headlight system to malfunction.
2-3. Operating the lights and windshield wipers

■ Automatic light off system

● When the headlights come on: The headlights and tail lights turn off 30 seconds after a door is opened and closed if the “POWER” switch is turned to ACCESSORY mode or turned off. (The lights turn off immediately if ➕ on the key is pressed after all the doors are locked.)

● When only the tail lights come on: The tail lights turn off automatically if the “POWER” switch is turned to ACCESSORY mode or turned off and the driver’s door is opened.

To turn the lights on again, turn the “POWER” switch to ON mode, or turn the light switch off once and then back to ➕ or ➖.

■ Automatic headlight leveling system (if equipped)

The level of the headlights is automatically adjusted according to the number of passengers and the loading condition of the vehicle to ensure that the headlights do not interfere with other road users.

■ If the “AFS OFF” indicator flashes (if equipped)

It may indicate a malfunction in the system. Contact your Lexus dealer.

■ Customization

Settings (e.g. light sensor sensitivity) can be changed.

(Customizable features ➞ P. 693)

⚠️ NOTICE

■ To prevent 12-volt battery discharge

Do not leave the lights on longer than necessary when the hybrid system is off.
2-3. Operating the lights and windshield wipers

**Automatic High Beam**

The Automatic High Beam uses an in-vehicle camera sensor to assess the brightness of streetlights, the lights of oncoming and preceding vehicles, etc., and automatically turns high beam on or off as necessary.

■ Activating the Automatic High Beam system

► Type A

[Image of headlight switch being turned to AUTO position]

Turn the headlight switch to the AUTO position.
2-3. Operating the lights and windshield wipers

Type B

STEP 1

Turn the headlight switch to the **AUTO** position.

STEP 2

Push the lever away from you.

The Automatic High Beam indicator will come on when the headlights are turned on automatically to indicate that the system is active.
■ Turning the high beam on/off manually

▶ Switching to low beam
Pull the lever to original position.

▶ Switching to high beam
Turn the light switch to position.
High beam automatic turning on or off conditions

When all of the following conditions are fulfilled, high beam will be automatically turned on (after approximately 1 second):

- Vehicle speed is above approximately 20 mph (32 km/h).
- The area ahead of the vehicle is dark.
- There are no oncoming or preceding vehicles with headlights or tail lights turned on.

If any of the following conditions are fulfilled, high beam will be automatically turned off:

- Vehicle speed drops below approximately 20 mph (32 km/h).
- The area ahead of the vehicle is not dark.
- Oncoming or preceding vehicles have headlights or tail lights turned on.

The Automatic High Beam can be operated when

The “POWER” switch is ON mode.

Limitations of the Automatic High Beam

Do not rely on the Automatic High Beam. Always drive safely, taking care to observe your surroundings and turning high beam on or off manually if necessary.

Camera sensor detection information

- High beam may not be automatically turned off in the following situations:
  - When oncoming vehicles suddenly appear from a curve.
  - When the vehicle is cut in front of by another.
- High beam may be turned off if an oncoming vehicle that is using fog lights without using the headlights is detected.
- House lights, street lights, red traffic signals, and illuminated billboards or signs may cause the high beam to turn off.
The following factors may affect the amount of time taken to turn high beam on or off:

- The brightness of headlights, fog lights, and tail lights of oncoming and preceding vehicles
- Road conditions (wetness, ice, snow etc.)
- The number of passengers and amount of baggage

High beam may be turned on or off when unexpected by the driver.

In the situations below, the system may not be able to correctly detect the surrounding brightness levels, and may flash or expose nearby pedestrians to the high beam. Therefore, you should consider turning the high beam on or off manually rather than relying on the Automatic High Beam system.

- In bad weather (rain, snow, fog, sandstorms etc.)
- The windshield is obscured by fog, mist, ice, dirt etc.
- The windshield is cracked or damaged.
- The inside rear view mirror or camera sensor is deformed or dirty.
- Surrounding brightness levels are equal to those of headlights, tail lights or fog lights.
- Vehicles ahead have headlights that are either switched off, dirty, are changing color, or have are not aimed properly.
- When driving through an area of intermittently changing brightness and darkness
- When frequently and repeatedly driving ascending/descending roads, or roads with rough, bumpy or uneven surfaces (such as stone-paved roads, gravel tracks etc.)
- When frequently and repeatedly taking curves or driving on a winding road
- There is a highly reflective object ahead of the vehicle, such as a sign or a mirror.
- The vehicle’s headlights are damaged or dirty.
- The vehicle is listing or tilting, due to a flat tire, a trailer being towed etc.
- The Automatic High Beam indicator is flashing.
- The high beam and low beam are repeatedly being switched between in an abnormal manner.
- The driver believes that the high beam may be causing problems or distress to other drivers or pedestrians nearby.
If the Automatic High Beam indicator flashes

It may indicate a malfunction in the system. Contact your Lexus dealer.

Temporary lowering sensor sensitivity

The sensitivity of the sensor can be temporarily lowered.
To lower the sensitivity, push and hold the “AUTO” button on the inside rear view mirror for 15 to 20 seconds, and release. The indicator light on the inside rear view mirror will flash to indicate that the sensitivity has been lowered.

When the “POWER” switch is turned off, the sensitivity will be returned to its normal level.

Customization

The Automatic High Beam can be turned off.
(Customizable features → P. 693)
**NOTICE**

**Notes when using the Automatic High Beam system**

Observe the following to ensure that the Automatic High Beam functions correctly.

- Do not touch the camera sensor.
- Do not subject the inside rear view mirror or the camera sensor to a strong impact.
- Do not disassemble the camera sensor.
- Do not spill liquid onto the inside rear view mirror or the camera sensor.
- Do not apply window tinting or stickers to the camera sensor or the area of windshield near the camera sensor.
- Do not place items on the dashboard. There is a possibility that the camera sensor will mistake items reflected in the windshield for streetlights, the headlights of other vehicles, etc.
- Do not install a parking tag or any other accessories near or around the inside rear view mirror and the camera sensor.
- Do not overload the vehicle.
- Do not modify the vehicle.
- Do not replace windshield with non-genuine windshield. Contact your Lexus dealer.
The fog lights improve visibility in difficult driving conditions, such as in rain and fog.

► Type A

1. Turns the front fog lights off
2. Turns the front fog lights on
2-3. Operating the lights and windshield wipers

▶ Type B

1. **OFF**  Turns the front fog lights off
2. **Fog**  Turns the front fog lights on
Fog lights can be used when
The headlights are on in low beam.
### Intermittent windshield wipers with interval adjuster (if equipped)

The wiper operation is selected by moving the lever as follows. When intermittent windshield wiper operation is selected, the wiper interval can be also adjusted.

#### Type A

1. Off
2. Intermittent windshield wiper operation
3. Low speed windshield wiper operation
4. High speed windshield wiper operation
5. Temporary operation
2-3. Operating the lights and windshield wipers

**Type B**

1. **OFF** Off
2. **AUTO** Intermittent windshield wiper operation
3. **LO** Low speed windshield wiper operation
4. **HI** High speed windshield wiper operation
5. **MIST** Temporary operation

6. Increases the intermittent windshield wiper frequency
7. Decreases the intermittent windshield wiper frequency

8. **Washer/wiper dual operation**

   The wipers will automatically operate a couple of times after the washer squirts.

   If the headlights are on, the headlight cleaners will operate once.
■ Rain-sensing windshield wipers (if equipped)

When **AUTO** is selected, the wipers will operate automatically when the sensor detects falling rain. The system automatically adjusts wiper timing in accordance with rain volume and vehicle speed.

When **AUTO** is selected, the sensor sensitivity can be adjusted as follows by turning the switch ring:

► Type A

1. Off
2. **AUTO** Rain-sensing wiper operation
3. **↓** Low speed wiper operation
4. **↓** High speed wiper operation
5. **△** Temporary operation
2-3. Operating the lights and windshield wipers

Type B

1. **OFF** Off
2. **AUTO** Rain-sensing wiper operation
3. **LO** Low speed wiper operation
4. **HI** High speed wiper operation
5. **MIST** Temporary operation
6. Sensor sensitivity (high)
7. Sensor sensitivity (low)
The windshield wipers and washer can be operated when
The “POWER” switch is in ON mode.

Effects of vehicle speed on wiper operation
Vehicle speed affects the following even when the wipers are not in AUTO mode:
- Intermittent wiper interval
- Wiper operation when the washer is being used (delay until drip prevention wiper sweep occurs)

When low speed wiper operation is selected, wiper operation will be switched from low speed to intermittent wiper operation only when the vehicle is stationary.
(However, when the sensor sensitivity is adjusted to the highest level, the mode cannot be switched.)

Raindrop sensor (vehicles with rain-sensing windshield wipers)
- The raindrop sensor judges the amount of raindrops.

An optical sensor is adopted. It may not operate properly when sunlight from the rising or setting of the sun intermittently strikes the windshield, or if bugs etc. are present on the windshield.

Washer/wiper dual operation
The wipers will automatically operate a couple of times after the washer squirts. (After operating several times, the wipers operate one more time after a short delay to prevent dripping.)
If the headlights are on, the headlight cleaners will operate once.
If the wiper switch is turned to the **AUTO** position while the “POWER” switch is in ON mode, the wipers will operate once to show that AUTO mode is activated.

- When the sensor sensitivity ring is turned toward high while in AUTO mode, the wipers will operate once to indicate that the sensor sensitivity is enhanced.
- If the temperature of the raindrop sensor is 194°F (90°C) or higher, or 5°F (-15°C) or lower, automatic operation may not occur. In this case, operate the wipers in any mode other than “AUTO”.

### If no windshield washer fluid sprays
Check that the washer nozzles are not blocked if there is washer fluid in the windshield washer fluid reservoir.

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Caution regarding the use of windshield wipers in AUTO mode (vehicles with rain-sensing windshield wipers)</strong></td>
</tr>
<tr>
<td>The windshield wipers may operate unexpectedly if the sensor is touched or the windshield is subject to vibration in AUTO mode. Take care that your fingers or anything else do not become caught in the windshield wipers.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>When the windshield is dry</strong></td>

<tr>
<td>Do not try to clear it with a pin or other object. The nozzle will be damaged.</td>
</tr>
</tbody>
</table>
The wiper operation is selected by moving the lever as follows:

- **Type A**

1. Off
2. Intermittent window wiper operation
3. Normal window wiper operation
4. Washer/wiper dual operation
5. Washer/wiper dual operation
The rear window wiper and washer can be operated when
The “POWER” switch is in ON mode.

**NOTICE**

- **When the rear window is dry**
  Do not use the wipers, as they may damage the rear window.

- **When the washer fluid tank is empty**
  Damage to the washer fluid pump may be caused if the lever is operated continu-
  ally.

- **When a nozzle becomes blocked**
  Do not try to clear it with a pin or other object. The nozzle will be damaged.
2-3. Operating the lights and windshield wipers

Headlight cleaner switch*

Washer fluid can be sprayed on the headlights.

Press the switch to clean the headlights.

- The headlight cleaner can be operated when
  The “POWER” switch is in ON mode and the headlight switch is turned on.

- Windshield washer linked operation
  When the windshield washer is operated with the “POWER” switch in ON mode
  and the headlights on, the headlight cleaner will operate once. (→P. 229)

⚠️ NOTICE

- When the washer fluid tank is empty
  Do not press the switch continually as the washer fluid pump may overheat.
Use the cruise control to maintain a set speed without depressing the accelerator pedal.

1 Indicator
2 Display
3 Cruise control switch

Setting the vehicle speed

Press the “ON-OFF” button to activate the cruise control.

Cruise control indicator will come on.

Press the button again to deactivate the cruise control.

*: If equipped
When driving

Accelerate or decelerate the vehicle to the desired speed, and push the lever down to set the speed.

“SET” will be displayed. The vehicle speed at the moment the lever is released becomes the set speed.

■ Adjusting the set speed

To change the set speed, operate the lever until the desired set speed is obtained.

1 Increases the speed
2 Decreases the speed

Fine adjustment: Momentarily move the lever in the desired direction.
Large adjustment: Hold the lever in the desired direction.

The set speed will be increased or decreased as follows:

Fine adjustment: By approximately 1 mph (1.6 km/h) each time the lever is operated.
Large adjustment: The set speed can be increased or decreased continuously until the lever is released.
Canceling and resuming the constant speed control

1 Pulling the lever towards you cancels the constant speed control.

The speed setting is also canceled when the brakes are applied.

2 Pushing the lever up resumes the constant speed control.

Resuming is available when the vehicle speed is more than approximately 25 mph (40 km/h).
Cruise control can be set when
- The shift lever is in D or range “4”, “5” or “6” of S has been selected.
- Vehicle speed is above 25 mph (40 km/h).

Accelerating after setting the vehicle speed
- The vehicle can be accelerated normally. After acceleration, the set speed resumes.
- Even without canceling the cruise control, the set speed can be increased by first accelerating the vehicle to the desired speed and then pushing the lever down to set the new speed.

Automatic cruise control cancelation
Cruise control will stop maintaining the vehicle speed in any of the following situations.
- Actual vehicle speed falls more than approximately 10 mph (16 km/h) below the preset vehicle speed.
  At this time, the memorized set speed is not retained.
- Actual vehicle speed is below approximately 25 mph (40 km/h).
- VSC is activated.

If the cruise control indicator light flashes
Press the “ON-OFF” button once to deactivate the system, and then press the button again to reactivate the system.
If the cruise control speed cannot be set or if the cruise control cancels immediately after being activated, there may be a malfunction in the cruise control system. Have the vehicle inspected by your Lexus dealer.
To avoid operating the cruise control by mistake
Switch the cruise control off using the “ON-OFF” button when not in use.

Situations unsuitable for cruise control
Do not use cruise control in any of the following situations. Doing so may result in loss of control and could cause an accident resulting in death or serious injury.
- In heavy traffic
- On roads with sharp bends
- On winding roads
- On slippery roads, such as those covered with rain, ice or snow
- On steep hills
  Vehicle speed may exceed the set speed when driving down a steep hill.
- When your vehicle is towing a trailer or during emergency towing
Dynamic radar cruise control supplements conventional cruise control with a vehicle-to-vehicle distance control. In vehicle-to-vehicle distance control mode, the vehicle automatically accelerates or decelerates in order to maintain a set following distance from vehicles ahead.

1. Indicator (vehicle-to-vehicle distance control mode)
2. Indicator (constant speed control mode)
3. Display
4. Vehicle-to-vehicle distance switch
5. Cruise control switch

Setting the vehicle speed (vehicle-to-vehicle distance control mode)

Press the “ON-OFF” button to activate the cruise control.

Press the button again to deactivate the cruise control.
Accelerate or decelerate the vehicle to the desired speed, and push the lever down to set the speed.

“SET” will be displayed.

The vehicle speed at the moment the lever is released becomes the set speed.

Adjusting the speed setting

To change the set speed, operate the lever until the desired set speed is displayed.

1 Increases speed
2 Decreases speed

Fine adjustment: Momentarily move the lever in the desired direction.
Large adjustment: Hold the lever in the desired direction.

In the vehicle-to-vehicle distance control mode, the set speed will be increased or decreased as follows:

► When the set speed is shown in “MPH”

Fine adjustment: By approximately 1 mph (1.6 km/h) each time the lever is operated
Large adjustment: By approximately 5 mph (8 km/h) for each 0.75 seconds the lever is held

*: If equipped
When the set speed is shown in “km/h”
Fine adjustment: By approximately 0.6 mph (1 km/h) each time the lever is operated

Large adjustment: By approximately 3.1 mph (5 km/h) for each 0.75 seconds the lever is held

In the constant speed control mode (→P. 249), the set speed will be increased or decreased as follows:
Fine adjustment: By approximately 1 mph (1.6 km/h) each time the lever is operated
Large adjustment: The set speed can be increased or decreased continually until the lever is released.

■ Changing the vehicle-to-vehicle distance

Pressing the button changes the vehicle-to-vehicle distance as follows:

1. Long
2. Medium
3. Short

The vehicle-to-vehicle distance is set automatically to long mode when the “POWER” switch is turned to ON mode.

If a vehicle is running ahead of you, the preceding vehicle mark will also be displayed.
2-4. Using other driving systems

**Vehicle-to-vehicle distance settings**
Select a distance from the table below. Note that the distances shown correspond to a vehicle speed of 50 mph (80 km/h). Vehicle-to-vehicle distance increases/decreases in accordance with vehicle speed.

<table>
<thead>
<tr>
<th>Distance options</th>
<th>Vehicle-to-vehicle distance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Long</td>
<td>Approximately 164 ft. (50 m)</td>
</tr>
<tr>
<td>Medium</td>
<td>Approximately 132 ft. (40 m)</td>
</tr>
<tr>
<td>Short</td>
<td>Approximately 82 ft. (25 m)</td>
</tr>
</tbody>
</table>

**Canceling and resuming the speed control**

1. Pulling the lever toward you cancels the cruise control. The speed setting is also canceled when the brakes are applied.

2. Pushing the lever up resumes the cruise control and returns vehicle speed to the set speed.

Resuming is available when the vehicle speed is more than approximately 25 mph (40 km/h).
Driving in vehicle-to-vehicle distance control mode

This mode employs a radar sensor to detect the presence of vehicles up to approximately 400 ft. (120 m) ahead, determines the current vehicle-to-vehicle following distance, and operates to maintain a suitable following distance from the vehicle ahead.

Note that vehicle-to-vehicle distance will close in when traveling on long downhill slopes.

1. Example of constant speed cruising
   When there are no vehicles ahead
   - The vehicle travels at the speed set by the driver. The desired vehicle-to-vehicle distance can also be set by operating the vehicle-to-vehicle distance control.

2. Example of deceleration cruising
   When the vehicle ahead is driving slower than the set speed
   - When a vehicle is detected running ahead of you, the system automatically decelerates your vehicle. When a greater reduction in vehicle speed is necessary, the system applies the brakes. A warning tone warns you when the system cannot decelerate sufficiently to prevent your vehicle from closing in on the vehicle ahead.
Example of follow-up cruising
When following a vehicle driving slower than the set speed
The system continues follow-up cruising while adjusting for changes in the speed of the vehicle ahead in order to maintain the vehicle-to-vehicle distance set by the driver.

Example of acceleration
When there are no longer any vehicles ahead driving slower than the set speed
The system accelerates until the set speed is reached. The system then returns to constant speed cruising.

Approach warning

When your vehicle is too close to a vehicle ahead, and sufficient automatic deceleration via the cruise control is not possible, the display will flash and the buzzer will sound to alert the driver. An example of this would be if another driver cuts in front of you while you are following a vehicle. Apply the brakes to ensure an appropriate vehicle-to-vehicle distance.

When warning does not occur
In the following instances, there is a possibility that the warnings will not occur:
- When the speed of the vehicle ahead matches or exceeds your vehicle speed
- When the vehicle ahead is traveling at an extremely slow speed
- Immediately after the cruise control speed was set
- At the instant the accelerator is applied
Selecting conventional constant speed control mode

Constant speed control mode differs from vehicle-to-vehicle distance control mode. When constant speed control mode is selected, your vehicle will maintain a set speed regardless of whether or not there are other vehicles in the lane ahead.

1. Press the “ON-OFF” button to activate the cruise control.
   Press the button again to deactivate the cruise control.

2. Switch to constant speed control mode.
   (Push the lever forward and hold for approximately one second.)
   Constant speed control mode indicator will come on.

When in constant speed control mode, to return to vehicle-to-vehicle distance control mode, push the lever forward again and hold for approximately 1 second.

After the desired speed has been set, it is not possible to return to vehicle-to-vehicle distance control mode.

If the “ENGINE START STOP” switch is turned off and then turned to IGNITION ON mode again, the vehicle will automatically return to vehicle-to-vehicle distance control mode.
Adjusting the speed setting:  
→ P. 244

Canceling and resuming the speed setting: → P. 246

■ Dynamic radar cruise control can be set when
  ● The shift lever is in the D or range “4”, “5”, or “6” or higher of S has been selected.
  ● Vehicle speed is above approximately 30 mph (50 km/h).

■ Accelerating after setting the vehicle speed
  The vehicle can accelerate normally. After acceleration, the set speed resumes. However, during vehicle-to-vehicle distance control mode, the vehicle speed may decrease below the set speed in order to maintain the distance to the vehicle ahead.

■ Automatic cancelation of vehicle-to-vehicle distance control
  Vehicle-to-vehicle distance control driving is automatically canceled in the following situations:
  ● Actual vehicle speed falls below approximately 25 mph (40 km/h).
  ● VSC is activated.
  ● The sensor cannot operate correctly because it is covered in some way.
  ● The windshield wipers are operating at high speed (when the wiper switch is set to the high speed wiper operation position).
  ● When the snow mode is set.

If vehicle-to-vehicle distance control driving is automatically canceled for any other reason, there may be a malfunction in the system. Contact your Lexus dealer.
■ Automatic cancelation of constant speed control

The cruise control will stop maintaining the vehicle speed in the following situations:

● Actual vehicle speed is more than approximately 10 mph (16 km/h) below the set vehicle speed.
  At this time, the memorized set speed is not retained.
● Vehicle speed falls below approximately 25 mph (40 km/h).
● VSC is activated.

■ Radar sensor and grille cover

Always keep the sensor and grille cover clean to ensure that the vehicle-to-vehicle distance control operates properly. (Some obstructions, such as snow, ice and plastic objects, cannot be detected by the obstruction sensor.) Dynamic radar cruise control is canceled if an obstruction is detected.

![Image of grille cover and radar sensor]

1 Grille cover
2 Radar sensor

■ Warning lights, messages and buzzers for dynamic radar cruise control

Warning lights, messages and buzzers are used to indicate a system malfunction or to inform the driver of the need for caution while driving. (→P. 614)
Certification
For vehicles sold in U.S.A.
FCC ID: HYQDNMWR005
This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC WARNING
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

Radiofrequency radiation exposure Information:
This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment.
This equipment should be installed and operated with minimum distance of 20 cm between the radiator (antenna) and your body.
This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

For vehicles sold in Canada
Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

CAUTION
Before using dynamic radar cruise control
Do not overly rely on vehicle-to-vehicle distance control.
Be aware of the set speed. If automatic deceleration/acceleration is not appropriate, adjust the vehicle speed, as well as the distance between your vehicle and vehicles ahead by applying the brakes etc.
Cautions regarding the driving assist systems
Observe the following precautions.
Failure to do so may cause an accident resulting in death or serious injury.

- Assisting the driver to measure following distance
  The dynamic radar cruise control is only intended to help the driver in determining the following distance between the driver’s own vehicle and a designated vehicle traveling ahead. It is not a mechanism that allows careless or inattentive driving, and it is not a system that can assist the driver in low-visibility conditions. It is still necessary for driver to pay close attention to the vehicle’s surroundings.

- Assisting the driver to judge proper following distance
  The dynamic radar cruise control determines whether the following distance between the driver’s own vehicle and a designated vehicle traveling ahead is appropriate or not. It is not capable of making any other type of judgement. Therefore, it is absolutely necessary for the driver to remain vigilant and to determine whether or not there is a possibility of danger in any given situation.

- Assisting the driver to operate the vehicle
  The dynamic radar cruise control has no capability to prevent or avoid a collision with a vehicle traveling ahead. Therefore, if there is ever any danger, the driver must take immediate and direct control of the vehicle and act appropriately in order to ensure the safety of all involved.

To avoid inadvertent cruise control activation
Switch the cruise control off using the “ON-OFF” button when not in use.
### CAUTION

<table>
<thead>
<tr>
<th>Situations unsuitable for dynamic radar cruise control</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not use dynamic radar cruise control in any of the following situations. Doing so may result in inappropriate speed control and could cause an accident resulting in death or serious injury.</td>
</tr>
<tr>
<td>• In heavy traffic</td>
</tr>
<tr>
<td>• On roads with sharp bends</td>
</tr>
<tr>
<td>• On winding roads</td>
</tr>
<tr>
<td>• On slippery roads, such as those covered with rain, ice and snow</td>
</tr>
<tr>
<td>• On steep downhills, or where there are sudden changes between sharp up and down gradients</td>
</tr>
<tr>
<td>• At entrances to expressways</td>
</tr>
<tr>
<td>• When weather conditions are bad enough that they may prevent the sensors from functioning correctly (fog, snow, sandstorm, heavy rain, etc.)</td>
</tr>
<tr>
<td>• When a buzzer is heard often</td>
</tr>
</tbody>
</table>

<table>

<th>When the sensor may not be correctly detecting the vehicle ahead</th>
</tr>
</thead>
<tbody>
<tr>
<td>Apply the brakes as necessary when any of the following types of vehicles are in front of you. As the sensor may not be able to correctly detect these types of vehicles, the approach warning (→ P. 248) will not be activated, and a fatal or serious accident may result.</td>
</tr>
<tr>
<td>• Vehicles that cut in suddenly</td>
</tr>
<tr>
<td>• Vehicles traveling at low speeds</td>
</tr>
<tr>
<td>• Vehicles that are not moving</td>
</tr>
<tr>
<td>• Vehicles with small rear ends (trailers with no load on board etc.)</td>
</tr>
<tr>
<td>• Motorcycles traveling in the same lane</td>
</tr>
</tbody>
</table>
### CAUTION

**Conditions under which the vehicle-to-vehicle distance control may not function correctly**

Apply the brakes as necessary in the following conditions as the radar sensor may not be able to correctly detect vehicles ahead, and a fatal or serious accident may result:

- When water or snow thrown up by the surrounding vehicles hinders the functioning of the sensor
- When your vehicle is pointing upwards (caused by a heavy load in the luggage compartment etc.)
- When the road curves or when the lanes are narrow
- When steering wheel operation or your position in the lane is unstable
- When the vehicle ahead of you decelerates suddenly

**To ensure the radar sensor functions correctly**

Do not do the following to the sensor or grille as doing so may cause the sensor not to function correctly and could result in an accident:

- Sticking or attaching anything to them
- Leaving them dirty
- Disassembling or subjecting them to strong shocks
- Modifying or painting them
- Replacing them with non-genuine parts
CAUTION

Handling the radar sensor

Observe the following to ensure the cruise control system can function effectively. Otherwise, the system may not function correctly and could result in an accident.

- Keep the sensor and front grille cover clean at all times. Clean the sensor and front grille cover with a soft cloth so you do not mark or damage them.
- Do not subject the sensor or surrounding area to a strong impact. If the sensor moves even slightly off position, the system may malfunction. If the sensor or surrounding area is subject to a strong impact, always have the area inspected and adjusted by a Lexus dealer.
- Do not disassemble the sensor.
- Do not attach accessories or stickers to the sensor, grille cover or surrounding area.
- Do not modify or paint the sensor and grille cover.
- Do not replace them with non-genuine parts.
2-4. Using other driving systems

Intuitive parking assist*

The distance to obstacles measured by the sensors is communicated via the multi-information display and a buzzer when parallel parking or maneuvering into a garage is conducted. Always check the surrounding area when using this system.

■ Types of sensors

1. Front corner sensors
2. Rear corner sensors
3. Rear center sensors

■ Setting the intuitive parking assist mode

1. Press the menu switch.
   The multi-information display will change modes to electronic features control mode.

2. Press the “ENTER” switch upwards or downwards until the intuitive parking assist mark appears in the multi-information display.

*: If equipped
2-4. Using other driving systems

Press the “ENTER” switch to change to “ON”.

The intuitive parking assist indicator will be displayed.

Each pressing of the switch turns the intuitive parking assist on and off.

When on, the buzzer sounds to inform the driver that the system is operational.

Press the menu switch to change to the normal display.

**Display**

When the sensors detect an obstacle, a graphic is shown on the multi-information display depending on the position and distance to the obstacle.

1. Front corner sensor operation
2. Rear corner sensor operation
3. Rear center sensor operation
The distance display and buzzer

When a sensor detects an obstacle, the direction of and the approximate distance to the obstacle are displayed and the buzzer sounds.

The site of the obstacle will flash (detection level 4 only).

- **Front corner sensors**

<table>
<thead>

<td>1.2 ft. (35 cm) or less</td>
<td>Continuous</td>
</tr>
</tbody>
</table>

2-4. Using other driving systems

Detection range of the sensors

1. Approximately 2.0 ft. (60 cm)
2. Approximately 1.6 ft. (50 cm)
3. Approximately 4.9 ft. (150 cm)

The diagram shows the detection range of the sensors. Note that the sensors cannot detect obstacles that are extremely close to the vehicle.

The range of the sensors may change depending on the shape of the object etc.

The intuitive parking assist can be operated when

- Front corner sensors:
  - The “POWER” switch is in ON mode.
  - The shift lever is in a position other than P.
  - The vehicle speed is less than about 6 mph (10 km/h).

- Rear corner and center sensors:
  - The “POWER” switch is in ON mode.
  - The shift lever is in R.
■ Sensor detection information

Certain vehicle conditions and the surrounding environment may affect the ability of a sensor to correctly detect an obstacle. Particular instances where this may occur are listed below.

• There is dirt, snow or ice on a sensor.
• A sensor is frozen.
• A sensor is covered in any way.
• The vehicle is leaning considerably to one side.
• On an extremely bumpy road, on an incline, on gravel, or on grass.
• The vicinity of the vehicle is noisy due to vehicle horns, motorcycle engines, air brakes of large vehicles, or other loud noises producing ultrasonic waves.
• There is another vehicle equipped with parking assist sensors in the vicinity.
• A sensor is coated with a sheet of spray or heavy rain.
• The vehicle is equipped with a fender pole or radio antenna.
• Towing eyelets are installed.
• A bumper or sensor receives a strong impact.
• The vehicle is approaching a tall or right-angled curb.
• In harsh sunlight or intense cold weather.
• A non-genuine Lexus suspension (lowered suspension, etc.) is installed.

In addition to the examples above, there are instances in which, because of their shapes, signs and other objects may be judged by a sensor to be closer than they are.

The shape of the obstacle may prevent a sensor from detecting it. Pay particular attention to the following obstacles:

• Wires, fences, ropes, etc.
• Cotton, snow and other materials that absorb sound waves
• Sharply-angled objects
• Low obstacles
• Tall obstacles with upper sections projecting outwards in the direction of your vehicle

■ If a message is displayed

→ P. 608

■ Certification (Canada only)

This ISM device complies with Canadian ICES-001.
### Customization

Settings (e.g. buzzer volume) can be changed. (Customizable features → P. 693)

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
</table>
| **Caution when using the intuitive parking assist**  
Observe the following precautions.  
Failing to do so may result in the vehicle being unable to be driven safely and possibly cause an accident.  
- Do not use the sensor at speeds in excess of 6 mph (10 km/h).  
- Do not attach any accessories within the sensor range. |

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
</table>
| **Notes when washing the vehicle**  
Do not apply intensive bursts of water or steam to the sensor area. Doing so may result in the sensor malfunctioning.  
**Conditions possibly indicating system malfunctions**  
If any of the following occurs, the system may be malfunctioning due to a sensor failure etc. Have the vehicle inspected by your Lexus dealer.  
- The buzzer does not sound when the intuitive parking assist mode is set.  
- The sensor operation display flashes and the buzzer sounds even when no obstacle is detected.  
- An area of the sensors is hit or subjected to a strong impact.  
- Either bumper is hit.  
- The sensor operation display remains on even though no buzzer sounds. |
The electronically modulated air suspension allows the driver to control vehicle height in order to adjust driving conditions. Select the desired height with the height selector switch.

1 Multi-information display
2 Electronically modulated air suspension indicator
3 Height control off switch
4 Height selector switch (driver’s side instrument panel)
5 Height selector switch (luggage compartment)

*: If equipped
## Selecting vehicle height

### Height modes

- **“HI” mode:** For driving on bumpy roads
  - 1.2 in. (30 mm) higher than the normal height
  - “HI” mode cannot be selected when vehicle speed exceeds 19 mph (30 km/h).
- **“N” mode:** For ordinary driving
  - Normal height
- **“LO” mode:** For sporty driving
  - Vehicle front: 0.8 in. (20 mm) lower than the normal height
  - Vehicle rear: 0.2 in. (5 mm) lower than the normal height
- **Luggage mode:** For easy entry/exit and easy luggage loading/unloading
  - 1.2 in. (30 mm) lower than the normal height

### Height selector switch

Press the height selector switch for approximately 1 second.

#### Driver’s side instrument panel

1. **Higher**
   - Pressing this switch while the vehicle is in luggage mode changes the vehicle height to that of “N” mode.

2. **Lower**
   - Pressing the switch while the vehicle is in “LO” mode changes the vehicle height to that of luggage mode.
Luggage compartment

1 Higher
Pressing this switch while the vehicle is in luggage mode changes the vehicle height to that of “N” mode.

2 Lower
Pressing this switch while the vehicle is in “N” mode changes the vehicle height to that of luggage mode, not “LO” mode.

Electronically modulated air suspension indicator

The indicator for the selected mode will come on.
The indicator will flash while the vehicle height is being changed to the height of the selected mode.

Disabling the height control

Press the height control off switch while the vehicle is stopped. A message will appear on the multi-information display, and vehicle height will be fixed in the current mode.

When vehicle speed exceeds 19 mph (30 km/h), the electronically modulated air suspension is re-enabled automatically.
Operating conditions
After stopping the hybrid system, the vehicle will remain lowered for a maximum of 60 seconds.

- Height selector switch (driver's side instrument panel)
  - While the hybrid system is operating, any vehicle height mode can be selected.
  - Luggage mode can only be selected when the shift lever is in the P position.

- Height selector switch (luggage compartment)
  - When the hybrid system is operating and the shift lever is in the P position, any vehicle height other than “LO” mode can be selected.
  - When the “POWER” switch is turned off, the vehicle height can only be lowered (only the “▼” side of the switch can be operated).
  This switch can only be operated when the back door is open.

- Height control off switch
  When the vehicle is stopped with the “POWER” switch in ON mode, vehicle height control can be disabled/re-enabled.

When changing vehicle height modes
Before operating the height selector switch to raise/lower the vehicle height, ensure that there are no objects in the surrounding area that could damage the vehicle.

When “N” mode is selected
During high speed driving, the vehicle height will automatically change to that of “LO” mode.

When “HI” mode is selected
The vehicle height will change to that of “N” mode when vehicle speed reaches 31 mph (50 km/h) or when vehicle speed has exceeded 19 mph (30 km/h) for approximately 10 seconds. Even if vehicle speed is then reduced to under 19 mph (30 km/h), height will not return to “HI” mode.

When “LO” mode is selected
The vehicle height will change to that of “N” mode when the hybrid system is restarted.
When luggage mode is selected

If the vehicle begins to move while still in luggage mode, the vehicle will automatically change to “N” mode once speed exceeds 5 mph (8 km/h). Even if vehicle speed is reduced below 5 mph (8 km/h), the vehicle height will not automatically return to luggage mode.

Operating sound of the air suspension

When the vehicle height is lowered, such as when entering and loading the vehicle, or when the height selector switch is operated, the sound of the compressor operating or the mode changing may be heard. This does not indicate a malfunction.

Automatic leveling function

Regardless of the number of occupants and the luggage load, vehicle height in any mode is always adjusted to a fixed height by the automatic leveling function.

Vehicle height mode change time

- If the height control is operated continuously to lower the vehicle, the suspension air tank may become full, causing operation of the vehicle height lowering control to become slow.
- To protect the compressor, the system will only raise the vehicle for a total of 100 consecutive seconds. If it takes longer than this to reach the selected height, operation may be suspended shortly and then restart. However, it may not be possible to change the vehicle’s height mode at this time.

The electronically modulated air suspension will not operate when

The vehicle height control may not be able to change modes when the vehicle runs over a high curb or other rugged surfaces where the suspension is stretched.

---

CAUTION

The electronically modulated air suspension must be turned off when

The electronically modulated air suspension must be turned off in the following situations as vehicle height may change, due to the automatic leveling function and you may catch part of your body in the vehicle, resulting in and cause an accident, resulting in death or serious injury.

- Any of the wheels is stuck in a ditch.
- It is necessary to jack up the vehicle.
2-4. Using other driving systems

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
</table>
| ● It is necessary to tow the vehicle with part of it lifted.  
● When connecting/disconnecting a trailer  
For safety, stop the hybrid system if necessary. |

<table>
<thead>
<tr>
<th>“HI” mode</th>
</tr>
</thead>
</table>
| ● “HI” mode should only be used when driving on rough roads, for example when driving off-road. Because the vehicle’s center of gravity will become higher when in the mode, the vehicle may become unstable when turning abruptly and cause an accident, resulting in death or serious injury.  
● Do not select “HI” mode when loading cargo on the roof luggage carrier. Because the vehicle's center of gravity will become higher when in the mode, the vehicle may become unstable when turning abruptly and cause an accident, resulting in death or serious injury. |

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
</table>
| ■ Do not select “LO” mode when driving on bumpy roads.  
If the underbody of the vehicle touches a rugged road surface, the vehicle may be damaged. Also be careful when driving while the vehicle is automatically returning from luggage or “LO” mode to “N” mode. |

<table>
<thead>
<tr>
<th>Automatic return to “N” mode</th>
</tr>
</thead>
</table>
| In the following situations, the height of the vehicle will automatically increase. Be careful in any place where overhead space is limited.  
● The vehicle begins to move while still in luggage mode.  
● The hybrid system is restarted while the vehicle is in “LO” mode. |

<table>
<thead>
<tr>
<th>Vehicle height while parked</th>
</tr>
</thead>
<tbody>
<tr>
<td>If the temperature changes or the vehicle is parked for a long time, the vehicle height may decrease.</td>
</tr>
</tbody>
</table>
Rear view monitor system (rear view mirror-attached type)*

The rear view monitor system assists the driver by displaying an image of the area behind the vehicle. The image is displayed in reverse on the screen. This reversed image is a similar image to the one on the inside rear view mirror.

The rear view image is displayed when the shift lever is in the R position.

- If the shift lever is shifted out of R, the screen is turned off.
- The screen remains on for approximately 5 minutes.

*: If equipped
■ The rear view monitor system can be operated when

The “POWER” switch is in ON mode and the back door is fully closed.

■ Switching the screen on/off

When the screen is displayed, press the “AUTO” button on the inside rear view mirror to switch the screen on/off.

Screen on: Green indicator comes on.

Screen off: Orange indicator comes on.

The auto anti-glare inside rear view mirror will revert to the screen on each time the “POWER” switch is turned to ON mode.

■ Displayed area

The area covered by the camera is limited. Objects that are close to either corner of the bumper or under the bumper cannot be seen on the screen.

The area displayed on the screen may vary according to vehicle orientation or road conditions.
Rear view monitor system camera

In the following cases, it may become difficult to see the images on the screen, even when the system is functioning correctly:

- The vehicle is in a dark area, such as at night.
- The temperature near the lens is extremely high or low.
- Water droplets are on the camera lens or humidity is high, such as when it rains.
- The camera has scratches or dirt on it.
- Foreign matter, such as snow or mud, adheres to the camera lens.
- The sun or headlights are shining directly into the camera lens.

Smear effect

If a bright light, such as sunlight reflected off the vehicle body, is picked up by the camera, a smear effect* characteristic to the camera may occur.

*: Smear effect — A phenomenon that occurs when a bright light is picked up by the camera; when transmitted by the camera, the light source appears to have a vertical streak above and below it.
## CAUTION

When using the rear view monitor system, observe the following precautions to avoid an accident that could result in death or serious injuries:

- Never depend solely on the monitor system when reversing.
- Always check visually and with the mirrors to confirm your intended path is clear.
- Depicted distances between objects and flat surfaces differ from actual distances.

### Conditions which may affect the rear view monitor system

- If the back of the vehicle has been hit, the camera’s position and mounting angle may have changed. Have the vehicle inspected by your Lexus dealer.
- Rapid temperature changes, such as when hot water is poured on the vehicle in cold weather, may cause the system to function abnormally.
- If the camera lens is dirty, it cannot transmit a clear image. Rinse with water and wipe with a soft cloth. If extremely dirty, wash with a mild cleanser and rinse.
- The displayed image may be darker and moving images may be slightly distorted when the system is cold.
- As the camera is of water proof construction, do not detach, disassemble or modify it. This may cause incorrect operation.
- Do not allow organic solvent, car wax, window cleaner or glass coating to adhere to the camera. If this happens, wipe it off as soon as possible.
- Use your own eyes to confirm the vehicle’s surroundings, as the displayed image may become faint or dark, and moving images will be distorted, or not entirely visible when the outside temperature is low. When backing up, be sure to check behind and all around the vehicle with your own eyes and the vehicle’s mirrors.
To help enhance driving safety and performance, the following systems operate automatically in response to various driving situations. Be aware, however, that these systems are supplementary and should not be relied upon too heavily when operating the vehicle.

- **ABS (Anti-lock Brake System)**
  Helps to prevent wheel lock when the brakes are applied suddenly, or if the brakes are applied while driving on a slippery road surface

- **Brake assist**
  Generates an increased level of braking force after the brake pedal is depressed, when the system detects a panic stop situation

- **VSC (Vehicle Stability Control)**
  Helps the driver to control skidding when swerving suddenly or turning on slippery road surfaces

- **TRAC (Traction Control)**
  Helps to maintain drive power and prevent the drive wheels from spinning when starting the vehicle or accelerating on slippery roads

- **Hill-start assist control**
  →P. 280

- **EPS (Electric Power Steering)**
  Employs an electric motor to reduce the amount of effort needed to turn the steering wheel
■ VDIM (Vehicle Dynamics Integrated Management)
  Provides integrated control of the ABS, brake assist, TRAC, VSC, hill-start assist control, and EPS systems.
  Helps to maintain vehicle stability when swerving on slippery road surfaces by controlling the brakes and hybrid system output.

■ PCS (Pre-Collision System) (if equipped)
  → P. 282

When the VSC/TRAC systems are operating

If the vehicle is in danger of slipping or if any of the drive wheels spins, the slip indicator light flashes to indicate that the VSC/TRAC systems are operating.
Disabling TRAC and/or VSC systems

If the vehicle gets stuck in fresh snow or mud, the TRAC/VSC systems may reduce power from the hybrid system to the wheels. You may need to turn the system off to enable you to rock the vehicle in order to free it.

■ Turning off the TRAC system only

To turn the TRAC system off, quickly press and release the switch.

A message will be shown on the multi-information display.

Press the switch again to turn the system back on.

■ Turning off both TRAC and VSC systems

To turn the TRAC and VSC systems off, press and hold the switch for 3 seconds or more while the vehicle is stopped.

A message will be shown on the multi-information display and VSC off indicator light will come on.

Press the switch again to turn the systems back on.
When the message is displayed on the multi-information display showing that TRAC has been disabled even if the VSC off switch has not been pressed

TRAC and hill-start assist control cannot be operated. Contact your Lexus dealer.

Sounds and vibrations caused by the ABS, VSC, TRAC and brake assist

- A sound may be heard from the engine compartment when the hybrid system is started or just after the vehicle begins to move. This sound does not indicate that a malfunction has occurred in any of these systems.
- Any of the following conditions may occur when the above systems are operating. None of these indicates that a malfunction has occurred.
  - Vibrations may be felt through the vehicle body and steering.
  - A motor sound may be heard after the vehicle comes to a stop.
  - The brake pedal may pulsate slightly after the ABS is activated.
  - The brake pedal may move down slightly after the ABS is activated.

EPS operation sound

When the steering wheel is operated, a motor sound (whirring sound) may be heard. This does not indicate a malfunction.

Reactivation of the TRAC /VSC systems

Turning off the hybrid system after turning off the TRAC/VSC systems will automatically reactivate them.

Reactivation of the TRAC system linked to vehicle speed

When only the TRAC system is turned off, the TRAC system will turn on when vehicle speed increases. However, when both TRAC and VSC systems are turned off, the systems will not turn on even when vehicle speed increases.

Reduced effectiveness of the EPS system

The effectiveness of the EPS system is reduced to prevent the system from overheating when there is frequent steering input over an extended period of time. The steering wheel may feel heavy as a result. Should this occur, refrain from excessive steering input or stop the vehicle and turn the hybrid system off. The EPS system should return to normal within 10 minutes.

If the slip indicator comes on

It may indicate a malfunction in the VSC or TRAC function. Contact your Lexus dealer.
2-4. Using other driving systems

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>The ABS does not operate effectively when</td>
</tr>
<tr>
<td>- Tires with inadequate gripping ability are used (such as excessively worn tires on a snow covered road).</td>
</tr>
<tr>
<td>- The vehicle hydroplanes while driving at high speed on a wet or slick road.</td>
</tr>
<tr>
<td>Stopping distance when the ABS is operating may exceed that of normal conditions</td>
</tr>
<tr>
<td>The ABS is not designed to shorten the vehicle’s stopping distance. Always maintain a safe distance from the vehicle in front of you in the following situations:</td>
</tr>
<tr>
<td>- When driving on dirt, gravel or snow-covered roads</td>
</tr>
<tr>
<td>- When driving with tire chains</td>
</tr>
<tr>
<td>- When driving over bumps in the road</td>
</tr>
<tr>
<td>- When driving over roads with potholes or roads with uneven surfaces</td>
</tr>
<tr>
<td>TRAC may not operate effectively when</td>
</tr>
<tr>
<td>Directional control and power may not be achievable while driving on slippery road surfaces, even if the TRAC system is operating.</td>
</tr>
<tr>
<td>Do not drive the vehicle in conditions where stability and power may be lost.</td>
</tr>
</tbody>
</table>
2-4. Using other driving systems

CAUTION

■ When the VSC is activated
The slip indicator light flashes. Always drive carefully. Reckless driving may cause an accident, resulting in death or serious injury. Exercise particular care when the indicator light flashes.

■ When the TRAC/VSC systems are turned off
Be especially careful and drive at a speed appropriate to the road conditions. As these are the systems to help enhance vehicle stability and driving force, do not turn the TRAC/VSC systems off unless necessary.

■ Replacing tires
Make sure that all tires are of the same size, brand, tread pattern and total load capacity. In addition, make sure that the tires are inflated to the recommended tire inflation pressure level.

The ABS and VSC systems will not function correctly if different tires are installed on the vehicle.
Contact your Lexus dealer for further information when replacing tires or wheels.

■ Handling of tires and suspension
Using tires with any kind of problem or modifying the suspension will affect the driving assist systems, and may cause a system malfunction.
Hill-start assist control helps to prevent the vehicle from rolling backwards when starting on an incline or slippery slope.

To engage hill-start assist control, further depress the brake pedal when the vehicle is stopped completely.

A buzzer will sound once to indicate the system is activated. The slip indicator will also start flashing.

### Hill-start assist control can be operated when
- The shift lever is in a position other than P.
- The parking brake is not applied.
- The accelerator pedal is not depressed.

### Hill-start assist control
- While hill-start assist control is operating, the brakes remain automatically applied after the driver releases the brake pedal. The stop lights and the high mounted stoplight turn on.
- Hill-start assist control operates for about 2 seconds after the brake pedal is released.
- If the slip indicator does not flash and the buzzer does not sound when the brake pedal is further depressed, slightly reduce the pressure on the brake pedal (do not allow the vehicle to roll backward) and then firmly depress it again. If the system still does not operate, check if the operating conditions explained above have been met.
■ **Hill-start assist control buzzer**

- When hill-start assist control is activated, the buzzer will sound once.
- In the following situations, hill-start assist control will be canceled and the buzzer will sound twice.
  - No attempt is made to drive the vehicle within approximately 2 seconds of releasing the brake pedal.
  - The shift lever is moved to P.
  - The parking brake is applied.
  - The brake pedal is depressed again.
  - The brake pedal has been depressed for more than approximately 3 minutes.

■ **If the slip indicator comes on**

It may indicate a malfunction in the system. Contact your Lexus dealer.

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Hill-start assist control</strong></td>
</tr>
<tr>
<td>- Do not overly rely on hill-start assist control. Hill-start assist control may not operate effectively on extremely steep inclines or roads covered in ice.</td>
</tr>
<tr>
<td>- Unlike the parking brake, hill-start assist control is not intended to hold the vehicle stationary for an extended period of time. Do not attempt to use hill-start assist control to hold the vehicle on an incline for an extended period of time, as doing so may lead to an accident.</td>
</tr>
</tbody>
</table>
2-4. Using other driving systems

**Pre-Collision System**

When the radar sensor detects the possibility of a frontal collision, safety systems such as the brake assist and seat belts are automatically engaged in an attempt to lessen impact and injuries to occupants as well as vehicle damage.

- **Pre-collision seat belts (front seat belts only)**
  
  If the pre-collision sensor detects that a collision is unavoidable, the pre-collision system will retract the seat belt before the collision occurs.
  
  The same will happen if the driver makes an emergency braking or loses control of the vehicle. (→P. 100)

  However, the system will not operate in the event of skidding when the VSC system is disabled.

- **Pre-collision brake assist**

  When there is a high possibility of a frontal collision, the system applies greater braking force in relation to how strongly the brake pedal is depressed.

---

**Radar sensor**

The radar sensor detects vehicles or other obstacles on or near the road ahead and determines whether a collision is imminent based on the position, speed, and heading of the obstacles.

*: If equipped
The pre-collision system is operational when

- Pre-collision seat belts linked to the radar sensor
  - Vehicle speed is greater than about 4 mph (5 km/h).
  - The speed at which your vehicle is approaching the obstacle or oncoming vehicle is greater than about 19 mph (30 km/h).
  - The front occupants are wearing a seat belt.

- Pre-collision seat belts in the event of sudden braking or skidding
  - Vehicle speed is greater than about 19 mph (30 km/h).
  - The system detects sudden braking or skidding.
  - The front occupants are wearing a seat belt.

- Pre-collision brake assist
  - Vehicle speed is greater than about 19 mph (30 km/h).
  - The speed at which your vehicle is approaching the obstacle or the vehicle running ahead of you is greater than about 19 mph (30 km/h).
  - The brake pedal is depressed.

Conditions that may trigger the system even if there is no possibility of collision

- When there is an object by the roadside at the entrance to a curve
- When passing an oncoming vehicle on a curve
- When driving over a narrow iron bridge
- When there is a metal object on the road surface
- When driving on an uneven road surface
- When passing an oncoming vehicle on a left-turn
- When your vehicle rapidly closes on the vehicle in front
- When a grade separation/interchange, sign, billboard, or other structure appears to be directly in the vehicle's line of travel
- When climbing a steep hill causes an overhead billboard or other metallic structure to appear directly in the vehicle's line of travel
- When an extreme change in vehicle height occurs
- When the axis of the radar is out of adjustment
- When passing through certain toll gates
- When driving on a bridge
When the system is activated in the situations described above, there is also a possibility that the seat belts will retract quickly and the brakes will be applied with a force greater than normal. When the seat belt is locked in the retracted position, stop the vehicle in a safe place, release the seat belt and refasten it.

■ Obstacles not detected

The sensor cannot detect plastic obstacles such as traffic cones. There may also be occasions when the sensor cannot detect pedestrians, animals, bicycles, motorcycles, trees, or snowdrifts.

■ When there is a malfunction in the system

Warning lights and/or warning messages will turn on or flash. (→P. 598, 608)

■ Certification

➢ For vehicles sold in U.S.A.

FCC ID: HYQDNMWR005

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC WARNING

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

Radiofrequency radiation exposure Information:

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment.

This equipment should be installed and operated with minimum distance of 20 cm between the radiator (antenna) and your body.

This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

➢ For vehicles sold in Canada

Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.
2-4. Using other driving systems

CAUTION

Limitations of the pre-collision system
Do not overly rely on the pre-collision system. Always drive safely, taking care to observe your surroundings and checking for any obstacles or other road hazards. Failure to do so may cause an accident resulting in death or serious injury.

When the sensor may not be correctly detecting the vehicle ahead
Apply the brakes as necessary in any of the following situations:
- When water or snow thrown up by the surrounding vehicles hinders the functioning of the sensor
- When your vehicle is pointing upwards (caused by a heavy load in the luggage compartment etc.)
- Vehicles that cut in suddenly
- Vehicles with small rear ends (trailers with no load on board etc.)
- Motorcycles traveling in the same lane

Handling the radar sensor
Observe the following to ensure the pre-collision system can function effectively:
- Keep the sensor and front grille clean at all times. Clean the sensor and front grille with a soft cloth so you do not mark or damage them.
- Do not subject the sensor or surrounding area to a strong impact. If the sensor moves even slightly off position, the system may malfunction. If the sensor or surrounding area is subject to a strong impact, always have the area inspected and adjusted by your Lexus dealer.
- Do not disassemble the sensor.
- Do not attach accessories or stickers to the sensor, grille or surrounding area.
- Do not modify or paint the sensor and grille cover.
2-5. Driving information

Utility vehicle precautions

This vehicle belongs to the utility vehicle class, which has higher ground clearance and narrower tread in relation to the height of its center of gravity.

Utility vehicle feature

- Specific design characteristics give it a higher center of gravity than ordinary passenger cars. This vehicle design feature causes this type of vehicle to be more likely to rollover. And, utility vehicles have a significantly higher rollover rate than other types of vehicles.

- It is not designed for cornering at the same speeds as ordinary passenger cars any more than low-slung sports cars designed to perform satisfactorily under off-road conditions. Therefore, sharp turns at excessive speeds may cause rollover.

CAUTION

- Utility vehicle precautions

Always observe the following precautions to minimize the risk of death or serious injury or damage to your vehicle:

- In a rollover crash, an unbelted person is significantly more likely to die than a person wearing a seat belt. Therefore, the driver and all passengers should fasten their seat belts whenever the vehicle is moving.

- Avoid sharp turns or abrupt maneuvers, if at all possible. Failure to operate this vehicle correctly may result in loss of control or vehicle rollover causing death or serious injury.

- Loading cargo on the roof luggage carrier will make the center of the vehicle gravity higher. Avoid high speeds, sudden starts, sharp turns, sudden braking or abrupt maneuvers, otherwise it may result in loss of control or vehicle rollover due to failure to operate this vehicle correctly.
Driving information

When driving

Off-road driving

Your vehicle is not designed to be driven off-road. However, in the event that off-road driving cannot be avoided, please observe the following precautions to help avoid the areas prohibited to vehicles.

- Drive your vehicle only in areas where off-road vehicles are permitted to travel.
- Respect private property. Get owner’s permission before entering private property.
- Do not enter areas that are closed. Honor gates, barriers and signs that restrict travel.
- Stay on established roads. When conditions are wet, driving techniques should be changed or travel delayed to prevent damage to roads.
- Avoid driving on very steep, slippery roads and other surfaces, such as sand, where the tires are liable to lose traction. Your vehicle may not perform as well as conventional AWD on-road vehicles on these surfaces.

CAUTION

- Always slow down in gusty crosswinds. Because of its profile and higher center of gravity, your vehicle is more sensitive to side winds than an ordinary passenger car. Slowing down will allow you to have better control.
- Do not drive horizontally across steep slopes. Driving straight up or straight down is preferred. Your vehicle (or any similar off-road vehicle) can tip over sideways much more easily than forward or backward.
Additional information for off-road driving

For owners in U.S. mainland, Hawaii and Puerto Rico:

To obtain additional information pertaining to driving your vehicle off-road, consult the following organizations.

- State and Local Parks and Recreation Departments
- State Motor Vehicle Bureau
- Recreational Vehicle Clubs
- U.S. Forest Service and Bureau of Land Management

CAUTION

Off-road driving precautions

Always observe the following precautions to minimize the risk of death or serious injury or damage to your vehicle:

- Drive carefully when off the road. Do not take unnecessary risks by driving in dangerous places.
- Do not grip the steering wheel spokes when driving off-road. A bad bump could jerk the wheel and injure your hands. Keep both hands and especially your thumbs on the outside of the rim.
- Always check your brakes for effectiveness immediately after driving in sand, mud, water or snow.
- After driving through tall grass, mud, rock, sand, water, etc., check that there is no grass, bush, paper, rags, stone, sand, etc. adhering or trapped to the underbody. Clear off any such matter from the underbody. If the vehicle is used with these materials trapped or adhering to the underbody, a breakdown or fire could occur.
- When driving off-road or in rugged terrain, do not drive at excessive speeds, jump, make sharp turns, strike objects, etc. This may cause loss of control or vehicle rollover causing death or serious injury. You are also risking expensive damage to your vehicle’s suspension and chassis.
2-5. Driving information

---

**NOTICE**

- **To prevent the water damage**

  Take all necessary safety measures to ensure that water damage to the hybrid battery, hybrid system or other components does not occur.

  - Water entering the engine compartment may cause severe damage to the hybrid system. Water entering the interior may cause the hybrid battery stowed under the rear seats to short circuit.
  
  - Water entering the hybrid transmission will cause deterioration in transmission quality. The malfunction indicator may come on, and the vehicle may not be drivable.
  
  - Water can wash the grease from wheel bearings, causing rusting and premature failure, and may also enter the hybrid transmission case, reducing the gear oil’s lubricating qualities.

- **When you drive through water**

  If driving through water, such as when crossing shallow streams, first check the depth of the water and the bottom of the riverbed for firmness. Drive slowly and avoid deep water.

- **Inspection after off-road driving**

  - Sand and mud that has accumulated around brake discs may affect braking efficiency and may damage brake system components.
  
  - Always perform a maintenance inspection after each day of off-road driving that has taken you through rough terrain, sand, mud, or water. For scheduled maintenance information, refer to the “Warranty and Services Guide/Owner’s Manual Supplement/Scheduled Maintenance”.

---
2-5. Driving information
Cargo and luggage

Take notice of the following information about storage precautions, cargo capacity and load.

- Stow cargo and luggage in the luggage compartment whenever possible.
- Be sure all items are secured in place.
- Be careful to keep the vehicle level. Placing the weight as far forward as possible helps maintain vehicle balance.
- For better fuel economy, do not carry unnecessary weight.

Capacity and distribution

Cargo capacity depends on the total weight of the occupants.

\[(\text{Cargo capacity}) = (\text{Total load capacity}) - (\text{Total weight of occupants})\]

Steps for Determining Correct Load Limit —

1. Locate the statement “The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs.” on your vehicle’s placard.
2. Determine the combined weight of the driver and passengers that will be riding in your vehicle.
3. Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.
4. The resulting figure equals the available amount of cargo and luggage load capacity.
   
   For example, if the “XXX” amount equals 1400 lbs. and there will be five 150 lb passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. \((1400 - 750 (5 \times 150) = 650 \text{ lbs.})\)

5. Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.
(6) If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle.

(→ P. 664)

Example based on your vehicle

When 2 people with the combined weight of 366 lb. (166 kg) are riding in your vehicle, the available amount of cargo and luggage load capacity will be as follows:

**2WD models**
Total load capacity: 825 lb. (370 kg)
825 lb. - 366 lb. = 459 lb. (370 kg - 166 kg = 204 kg)

**AWD models**
Total load capacity: 885 lb. (400 kg)
885 lb. - 366 lb. = 519 lb. (400 kg - 166 kg = 234 kg)

In this condition, if 3 more passengers with the combined weight of 388 lb. (176 kg) get on, the available cargo and luggage load will be reduced as follows:

**2WD models**
459 lb. - 388 lb. = 71 lb. (204 kg - 176 kg = 28 kg)

**AWD models**
519 lb. - 388 lb. = 131 lb. (234 kg - 176 kg = 58 kg)
As shown in the example above, if the number of occupants increases, the cargo and luggage load will be reduced by an amount that equals the increased weight due to the additional occupants. In other words, if an increase in the number of occupants causes an excess of the total load capacity (combined weight of occupants plus cargo and luggage load), you must reduce the cargo and luggage on your vehicle.

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
</table>

**Things that must not be carried in the luggage compartment**

The following things may cause a fire if loaded in the luggage compartment:

- Receptacles containing gasoline
- Aerosol cans

**Storage precautions**

Observe the following precautions. Failure to do so may result in death or serious injury.

- Stow cargo and luggage in the luggage compartment whenever possible.
- Do not stack cargo and luggage in the luggage compartment higher than the seatbacks. Such items may be thrown about and possibly injure people in the vehicle in the event of sudden braking or in an accident.
- Do not place cargo or luggage in or on the following locations as the items may get under the brake or accelerator pedal and prevent the pedals from being depressed properly, block the driver’s vision, or hit the driver or passengers, causing an accident:
  - At the feet of the driver
  - On the front passenger or rear seats (when stacking items)
  - On the luggage cover
  - On the instrument panel
  - On the dashboard
- Secure all items in the occupant compartment, as they may shift and injure someone in the event of sudden braking, sudden swerving or an accident.
Never allow anyone to ride in the luggage compartment. It is not designed for passengers. They should ride in their seats with their seat belts properly fastened. Otherwise, they are much more likely to suffer death or serious bodily injury, in the event of sudden braking, sudden swerving or an accident.

**Capacity and distribution**
- Do not exceed the maximum axle weight rating or the total vehicle weight rating.
- Even if the total load of occupant’s weight and the cargo load is less than the total load capacity, do not apply the load unevenly. Improper loading may cause deterioration of steering or braking control which may cause death or serious injury.

**Roof luggage carrier precautions**
To use the roof rails as a roof luggage carrier, you must fit the roof rails with two or more genuine Lexus cross rails or their equivalent.

When you load cargo on the roof luggage carrier, observe the following:

- Place the cargo so that its weight is distributed evenly between the front and rear axles.
- If loading long or wide cargo, never exceed the vehicle’s overall length or width. (→P. 664)

- Before driving, make sure the cargo is securely fastened on the roof luggage carrier.
- Loading cargo on the roof luggage carrier will make the center of gravity of the vehicle higher. Avoid high speeds, sudden starts, sharp turns, sudden braking or abrupt maneuvers, otherwise the result may be a loss of control or vehicle rollover due to failure to operate this vehicle correctly and result in death or serious injury.
- If driving for long distances, on rough roads, or at high speeds, stop the vehicle now and then during the trip to make sure the cargo remains in its place.
- Do not exceed 165 lb. (75 kg) cargo weight on the roof luggage carrier.
- To reduce wind noise when there is no luggage loaded on the roof luggage carrier, move the front cross rail to the front-most position and the rear cross rail to the rearmost position.
### NOTICE

- **When loading cargo**
  
  Be careful not to scratch the surface of the moon roof.
Vehicle load limits include total load capacity, seating capacity, TWR (Trailer Weight Rating) and cargo capacity.

- **Total load capacity**
  - 2WD models: 825 lb. (370 kg)
  - AWD models: 885 lb. (400 kg)
  Total load capacity means the combined weight of occupants, cargo and luggage.

- **Seating capacity: 5 occupants (Front 2, Rear 3)**
  Seating capacity means the maximum number of occupants whose estimated average weight is 150 lb. (68 kg) per person.

- **TWR (Trailer Weight Rating) (2WD models and AWD models without towing package)**
  Lexus does not recommend towing a trailer with your vehicle.

- **TWR (Trailer Weight Rating) (AWD models with towing package)**
  3500 lb. (1588 kg)
  TWR means the maximum gross trailer weight (trailer weight plus its cargo weight) that your vehicle is able to tow.

- **Cargo capacity**
  Cargo capacity may increase or decrease depending on the weight and the number of occupants.

---

**Total load capacity and seating capacity**

These details are also described on the tire and loading information label. (→P. 541)

---

**CAUTION**

- **Overloading the vehicle**
  Do not overload the vehicle.
  It may not only cause damage to the tires, but also degrade steering and braking ability, resulting in an accident.
Carry out the necessary preparations and inspections before driving the vehicle in winter. Always drive the vehicle in a manner appropriate to the prevailing weather conditions.

■ Pre-winter preparations
  ● Use fluids that are appropriate to the prevailing outside temperatures.
    • Engine oil
    • Engine/power control unit coolant
    • Washer fluid
  ● Have the vehicle fitted with four snow tires or purchase a set of tire chains for the front tires.
    Ensure that all tires are the same size and brand, and that chains match the size of the tires.

■ Before driving the vehicle
  Perform the following according to the driving conditions:
  ● Do not try to forcibly open a window or move a wiper that is frozen. Pour warm water over the frozen area to melt the ice. Wipe away the water immediately to prevent it from freezing.
  ● To ensure proper operation of the climate control system fan, remove any snow that has accumulated on the air inlet vents in front of the windshield.
  ● Remove any ice that has accumulated on the vehicle chassis.
  ● Periodically check for and remove any excess ice or snow that may have accumulated in the wheel well or on the brakes.
When driving the vehicle
Accelerate the vehicle slowly and drive at a reduced speed suitable to the road conditions.

When parking the vehicle
Park the vehicle and move the shift lever to P without setting the parking brake. The parking brake may freeze up, preventing it from being released. If necessary, block the wheels to prevent inadvertent sliding or creeping.

Selecting tire chains
Use the correct tire chain size when mounting the tire chains. Chain size is regulated for each tire size.

Side chain:
1. 0.12 in. (3 mm) in diameter
2. 0.98 in. (25 mm) in length
3. 0.43 in. (10.8 mm) in width

Cross chain:
4. 0.15 in. (3.9 mm) in diameter
5. 1.00 in. (25.3 mm) in length
6. 0.54 in. (13.8 mm) in width

Regulations on the use of tire chains
Regulations regarding the use of tire chains vary depending on location and type of road. Always check local regulations before installing chains.
## Tire chain installation

Observe the following precautions when installing and removing chains:

- Install and remove tire chains in a safe location.
- Install tire chains on the front tires only. Do not install tire chains on the rear tires.
- Install the tire chains on front tires as tightly as possible. Retighten chains after driving 1/4 — 1/2 mile (0.5 — 1.0 km).
- Install tire chains following the instructions provided with the tire chains.

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
</table>

### Driving with snow tires

Observe the following precautions to reduce the risk of accidents. Failure to do so may result in a loss of vehicle control and cause death or serious injury.

- Use tires of the size specified for your vehicle.
- Maintain the recommended level of air pressure.
- Do not drive in excess of 75 mph (120 km/h), regardless of the type of snow tires being used.
- Use snow tires on all, not just some wheels.

### Driving with tire chains

Observe the following precautions to reduce the risk of accidents. Failure to do so may result in the vehicle being unable to be driven safely, and may cause death or serious injury.

- Do not drive in excess of the speed limit specified for the tire chains being used, or 30 mph (50 km/h), whichever is lower.
- Avoid driving on bumpy road surfaces or over potholes.
- Avoid sudden turns and braking, as use of chains may adversely affect vehicle handling.
- Slow down sufficiently before entering a curve to ensure that vehicle control is maintained.
## NOTICE

- **Repairing or replacing snow tires**
  Request repairs or replacement of snow tires from Lexus dealers or legitimate tire retailers.
  This is because the removal and attachment of snow tires affects the operation of the tire pressure warning valves and transmitters.

- **Fitting tire chains**
  The tire pressure warning valves and transmitters may not function correctly when tire chains are fitted.
Your vehicle is designed primarily as a passenger-and-load-carrying vehicle. Towing a trailer can have an adverse impact on handling, performance, braking, durability, and fuel consumption. For your safety and the safety of others, you must not overload your vehicle or trailer. You must also ensure that you are using appropriate towing equipment, that the towing equipment has been installed correctly and used properly, and that you employ the requisite driving habits.

Vehicle-trailer stability and braking performance are affected by trailer stability, brake performance and setting, trailer brakes, the hitch and hitch systems (if equipped).

To tow a trailer safely, use extreme care and drive the vehicle in accordance with your trailer’s characteristics and operating conditions.

Lexus warranties do not apply to damage or malfunction caused by towing a trailer for commercial purposes.

Contact your Lexus dealer for further information about additional requirements such as towing kits, etc.

**Towing related terms**

- **GCWR (Gross Combination Weight Rating)**

  The maximum allowable gross combination weight. The gross combination weight is the sum of the total vehicle weight (including the occupants, cargo and any optional equipment installed on the vehicle) and the weight of the trailer being towed (including the cargo in the trailer).
■ GVWR (Gross Vehicle Weight Rating)

The maximum allowable gross vehicle weight. The gross vehicle weight is the total weight of the vehicle. When towing a trailer, it is the sum of the vehicle weight (including the occupants, cargo and any optional equipment installed on the vehicle) and the tongue weight.

■ GAWR (Gross Axle Weight Rating)

The maximum allowable gross axle weight. The gross axle weight is the load placed on each axle (front and rear).
■ TWR (Trailer Weight Rating)

The maximum allowable gross trailer weight. The gross trailer weight is the sum of the trailer weight and the weight of the cargo in the trailer.

TWR is calculated assuming base vehicle with one driver, one front passenger, towing package (if available), hitch and hitch systems (if required).

Additional optional equipment, passengers and cargo in the vehicle will reduce the trailer weight rating so as not to exceed GCWR, GVWR and GAWR.

If the gross trailer weight exceeds 3000 lb. (1360 kg), it is recommended to use a trailer with 2 or more axles.

■ Tongue Weight

The load placed on the trailer hitch ball. (→ P. 304)
Weight limits

- The gross trailer weight must never exceed 3500 lbs (1588 kg).
- The gross combination weight must never exceed 9480 lbs (4297 kg).
- The gross vehicle weight must never exceed the GVWR indicated on the Certification Label.
- The gross axle weight on each axle must never exceed the GAWR indicated on the Certification Label.
- If the gross trailer weight is over the unbraked TWR, trailer service brakes are required.
- If the gross trailer weight is over 2000 lb. (907 kg), a sway control device with sufficient capacity is required.

GCWR, TWR, Unbraked TWR, Fifth wheel and Gooseneck towing TWR

Confirm that the gross trailer weight, gross combination weight, gross vehicle weight, gross axle weight and tongue weight are all within the limits.

**GCWR**
- 9480 lb. (4297 kg)

**TWR**
- 3500 lb. (1588 kg)

*: These models meet the tow-vehicle trailering requirement of SAE International per SAE J2807.
2-5. Driving information

**Trailer Tongue Weight**

- A recommended tongue weight varies in accordance with the types of trailers or towing as described below.
- To ensure the recommended values shown below, the trailer must be loaded by referring to the following instructions.

  - **Tongue Weight**
    
    The gross trailer weight should be distributed so that the tongue weight is 9% to 11%. (Tongue weight / Gross trailer weight x 100 = 9% to 11%)

If using a weight distributing hitch when towing, return the front axle to the same weight as before the trailer connection.

If front axle weight cannot be measured directly, measure the front fender height above the front axle before connection. Adjust weight distributing hitch torque until front fender is returned to the same height as before connection.

The gross trailer weight, gross axle weight and tongue weight can be measured with platform scales found at a highway weighing station, building supply company, trucking company, junk yard, etc.
Hitch

Trailer hitch assemblies have different weight capacities. Lexus recommends the use of Lexus hitch/bracket for your vehicle. For details, contact your Lexus dealer.

- If you wish to install a trailer hitch, contact your Lexus dealer.
- Use only a hitch that conforms to the gross trailer weight requirement of your vehicle.
- Follow the directions supplied by the hitch manufacturer.
- Lubricate the hitch ball with a light coating of grease.
- Remove the trailer hitch whenever you are not towing a trailer. After removing the hitch, seal any mounting hole in the vehicle body to prevent entry of any substances into the vehicle.
Selecting trailer ball

Use the correct trailer ball for your application.

1. **Trailer ball load rating**
   Matches or exceeds the gross trailer weight rating of the trailer.

2. **Ball diameter**
   Matches the size of the trailer coupler. Most couplers are stamped with the required trailer ball size.

<table>
<thead>
<tr>
<th>Trailer class</th>
<th>Typical trailer ball size</th>
</tr>
</thead>
<tbody>
<tr>
<td>IV</td>
<td>2 5/16 in.</td>
</tr>
<tr>
<td>II and III</td>
<td>2 in.</td>
</tr>
<tr>
<td>I</td>
<td>17/8 in.</td>
</tr>
</tbody>
</table>

3. **Shank length**
   Protrudes beyond the bottom of the lock washer and nut by at least 2 threads.

4. **Shank diameter**
   Matches the ball mount hole diameter size.
Positions for towing hitch receiver and hitch ball

1. Weight carrying ball position: 45.1 in. (1145 mm)

Connecting trailer lights

4 pin connector

Use the wire harness stored in the rear end under body.
■ Auto current cut-off function

In case of over current, the auto cut-off function stops the power flowing to the trailer lights to prevent damage to the vehicle’s electrical system.

This function is activated when the rated current of any of the following trailer light circuit components is exceeded:

- Tail lights: maximum 7.8 A
- Stop/turn signal light (right): maximum 4.5 A
- Stop/turn signal light (left): maximum 4.5 A

■ When the auto current cut function is activated

If a trailer light does not come on due to the activation of the auto current cut function, the light system will need to be reset.

Follow the reset procedure shown below.

- If a tail light does not come on, turn off the headlight switch.
- If the right-side stop/turn signal light does not come on, put the turn signal in the off position or remove foot from the brake pedal.
- If the left-side stop/turn signal light does not come on, put the turn signal in the off position or remove foot from the brake pedal.

If the emergency flashers do not operate, press the emergency flasher switch to turn them off.

After the light system is reset, operate the light switches again to see if the lights operate normally.

If the lights do not operate normally, have the vehicle inspected by your Lexus dealer.
Connecting and disconnecting a trailer (Vehicles with height control system)

If a height control system is installed in your vehicle, you have to connect and disconnect your trailer more carefully.

● Connecting

**STEP 1** Set the electronically modulated air suspension to “LO” mode.

**STEP 2** Press the height control off switch to turn off the electronically modulated air suspension.

**STEP 3** Turn off the “POWER” switch.

**STEP 4** Connect the trailer.

**STEP 5** Turn on the “POWER” switch.

**STEP 6** Press the height control off switch again to turn on the electronically modulated air suspension.

**STEP 7** Set the electronically modulated air suspension to “N” mode.

● Disconnecting

**STEP 1** Set the electronically modulated air suspension to “LO” mode.

**STEP 2** Press the height control off switch to turn off the electronically modulated air suspension.

**STEP 3** Turn off the “POWER” switch.

**STEP 4** Set the supporting leg of the trailer on the ground and raise the hitch by 4 in. (100 mm)

**STEP 5** Turn on the “POWER” switch.

**STEP 6** Press the height control off switch again to turn on the electronically modulated air suspension.

**STEP 7** Wait until vehicle height is stabilized.

**STEP 8** Make sure the hitch is disconnected. If the hitch does not disconnect, raise the hitch higher and repeat steps 2 through 7.

**STEP 9** Move the vehicle forward in “LO” mode where the hitch does not touch anything in “N” mode.

**STEP 10** Set the height control of electronically modulated air suspension system to “N” mode.
Your vehicle will handle differently when towing a trailer. Help to avoid an accident, death or serious injury, keep the following in mind when towing:

● Speed limits for towing a trailer vary by state or province. Do not exceed the posted towing speed limit.

● Lexus recommends that the vehicle-trailer speed limit is 65 mph (104 km/h) on a flat, straight, dry road. Do not exceed this limit, the posted towing speed limit or the speed limit for your trailer as set forth in your trailer owner’s manual, whichever is lowest. Instability of the towing vehicle-trailer combination (trailer sway) increases as speed increases. Exceeding speed limits may cause loss of control.

● Before starting out, check the trailer lights, tires and the vehicle-trailer connections. Recheck after driving a short distance.

● Practice turning, stopping and reversing with the trailer attached in an area away from traffic until you become accustomed to the feel of the vehicle-trailer combination.

● Reversing with a trailer attached is difficult and requires practice. Grip the bottom of the steering wheel and move your hand to the left to move the trailer to the left. Move your hand to the right to move the trailer to the right. (This is generally opposite to reversing without a trailer attached.) Avoid sharp or prolonged turning. Have someone guide you when reversing to reduce the risk of an accident.

● As stopping distance is increased when towing a trailer, vehicle-to-vehicle distance should be increased. For each 10 mph (16 km/h) of speed, allow at least one vehicle and trailer length.

● Avoid sudden braking as you may skid, resulting in the trailer jackknifing and a loss of vehicle control. This is especially true on wet or slippery surfaces.

● Avoid jerky starts or sudden acceleration.
Avoid jerky steering and sharp turns, and slow down before making a turn.

Note that when making a turn, the trailer wheels will be closer than the vehicle wheels to the inside of the turn. Compensate by making a wider than normal turning radius.

Slow down before making a turn, in cross winds, on wet or slippery surfaces, etc. Increasing vehicle speed can destabilize the trailer.

Take care when passing other vehicles. Passing requires considerable distance. After passing a vehicle, do not forget the length of your trailer, and be sure you have plenty of room before changing lanes.

To maintain engine braking efficiency and charging system performance when using engine braking, do not put the transmission in D.

Instability happens more frequently when descending steep or long downhill grades. Before descending, slow down and downshift. Do not make sudden downshifts while descending steep or long downhill grades.

Avoid holding the brake pedal down too long or applying the brakes too frequently. This could cause the brakes to overheat and result in reduced braking efficiency.

Due to the added load of the trailer, your vehicle’s engine may overheat on hot days (at temperatures over 85°F [30°C]) when driving up a long or steep grade. If the engine coolant temperature gauge indicates overheating, immediately turn off the air conditioning (if in use), pull your vehicle off the road and stop in a safe spot. (→P. 655)
Always place wheel blocks under both the vehicle’s and the trailer’s wheels when parking. Apply the parking brake firmly, and put the transmission in P. Avoid parking on a slope, but if unavoidable, do so only after performing the following:

**STEP 1** Apply the brakes and keep them applied.

**STEP 2** Have someone place wheel blocks under both the vehicle’s and trailer’s wheels.

**STEP 3** When the wheel blocks are in place, release the brakes slowly until the blocks absorb the load.

**STEP 4** Apply the parking brake firmly.

**STEP 5** Shift into P and turn off the hybrid system.

When restarting after parking on a slope:

**STEP 1** With the transmission in P, start the hybrid system. Be sure to keep the brake pedal depressed.

**STEP 2** Shift into a forward gear. If reversing, shift into R.

**STEP 3** Release the parking brake and brake pedal, and slowly pull or back away from the wheel blocks. Stop and apply the brakes.

**STEP 4** Have someone retrieve the blocks.
■ Matching trailer ball height to trailer coupler height

No matter which class of tow hitch applies, for a more safe trailer hookup, the trailer ball setup must be the proper height for the coupler on the trailer.

1 Coupler
2 Trailer ball

■ Before towing

Check that the following conditions are met:

- Ensure that your vehicle’s tires are properly inflated. (→ P. 673)
- Trailer tires are inflated according to the trailer manufacturer’s recommendation.
- All trailer lights work as required by law.
- All lights work each time you connect them.
- The trailer ball is set at the proper height for the coupler on the trailer.
- The vehicle remains level when a loaded or unloaded trailer is hitched. Do not drive if the vehicle is not level, and check for improper tongue weight, overloading, worn suspension, or other possible causes.
- The trailer cargo is securely loaded.
- The rear view mirrors conform to all applicable federal, state/provincial or local regulations. If they do not, install rear view mirrors appropriate for towing purposes.
■ Break-in schedule

If your vehicle is new or equipped with any new power train components (such as an engine, transmission, differential or wheel bearing), Lexus recommends that you do not tow a trailer until the vehicle has been driven for over 500 miles (800 km).

After the vehicle has been driven for over 500 miles (800 km), you can start towing. However, for the next 500 miles (800 km), drive the vehicle at a speed of less than 50 mph (80 km/h) when towing a trailer, and avoid full throttle acceleration.

■ Maintenance

● If you tow a trailer, your vehicle will require more frequent maintenance due to the additional load. (See “Warranty and Services Guide”, “Owner’s Manual Supplement” or “Scheduled Maintenance”.)

● Retighten the fixing bolts of the towing ball and bracket after approximately 600 miles (1000 km) of trailer towing.

■ If trailer sway occurs

One or more factors (crosswinds, passing vehicles, rough roads, etc.) can adversely affect handling of your vehicle and trailer, causing instability.

● If trailer swaying occurs:
  • Firmly grip the steering wheel. Steer straight ahead. 
    Do not try to control trailer swaying by turning the steering wheel.
  • Begin releasing the accelerator pedal immediately but very gradually to reduce speed. 
    Do not increase speed. Do not apply vehicle brakes.

If you make no extreme correction with the steering or brakes, your vehicle and trailer should stabilize.

● After the trailer swaying has stopped:
  • Stop in a safe place. Get all occupants out of the vehicle.
  • Check the tires of the vehicle and the trailer.
  • Check the load in the trailer. 
    Make sure the load has not shifted. 
    Make sure the tongue weight is appropriate, if possible.
  • Check the load in the vehicle. 
    Make sure the vehicle is not overloaded after occupants get in.

If you cannot find any problems, the speed at which trailer swaying occurred is beyond the limit of your particular vehicle-trailer combination. 
Drive at a lower speed to prevent instability. Remember that swaying of the towing vehicle-trailer increases as speed increases.
When driving

CAUTION

■ Trailer towing precautions

● To tow a trailer safely, use extreme care and drive the vehicle in accordance with the trailer’s characteristics and operating conditions. Failure to do so could cause an accident resulting in death or serious injury. Vehicle stability and braking performance are affected by trailer stability, brake setting and performance, and the hitch. Your vehicle will handle differently when towing a trailer.

● Vehicles with electronically modulated air suspension (if equipped): Set the vehicle height to the "LO" mode and turn off the electronically modulated air suspension when you connect a trailer, otherwise the vehicle height may change due to the automatic leveling function, and you may catch part of your body in the vehicle, resulting in an accident.

■ To avoid accident or injury

● Do not exceed the TWR, unbraked TWR, GCWR, GVWR or GAWR.

● If the gross trailer weight is over 2000 lb. (907 kg), a sway control device with sufficient capacity is required.

● Adjust the tongue weight within the appropriate range. Place heavier loads as close to the trailer axle as possible.

● Do not exceed 65 mph (104 km/h), the posted towing speed limit or the speed limit for your trailer as set forth in your trailer owner’s manual, whichever is lowest. Slow down sufficiently before making a turn, in cross winds, on wet or slippery surface, etc. to help avoid an accident. If you experience a vehicle-trailer instability from reducing a certain speed, slow down and make sure you keep your vehicle speed under the speed of which you experience the instability.

● Do not make jerky, abrupt or sharp turns.

● Do not apply the brakes suddenly as you may skid, resulting in jackknifing and loss of vehicle control. This is especially true on wet or slippery surfaces.

● Do not exceed the trailer hitch assembly weight, gross vehicle weight, gross axle weight and trailer tongue weight capacities.
2-5. Driving information

CAUTION

- Do not use cruise control when towing.
- Slow down and downshift before descending steep or long downhill grades. Do not make sudden downshifts while descending steep or long downhill grades.
- Vehicle-trailer instability is more likely on steep long downhills. Before descending steep or long downhill grades, slow down and downshift. Do not make sudden downshifts when descending steep or long downhill grades. Avoid holding the brake pedal down too long or applying the brakes too frequently. This could cause the brakes to overheat and result in reduced braking efficiency.
- Do not tow a trailer when the compact spare tire is installed on your vehicle.

Hitch

Trailer hitch assemblies have different weight capacities established by the hitch manufacturer. Even though the vehicle may be physically capable of towing a higher weight, the operator must determine the maximum weight rating of the particular hitch assembly and never exceed the maximum weight rating specified for the trailer-hitch. Exceeding the maximum weight rating set by the trailer-hitch manufacturer can cause an accident resulting in death or serious personal injuries.

When towing a trailer

Lexus recommends trailers with brakes that conform to any applicable federal and state/provincial regulations.
- If the gross trailer weight exceeds unbraked TWR, trailer brakes are required. Lexus recommends trailers with brakes that conform to all applicable federal and state/provincial regulations.
- Never tap into your vehicle’s hydraulic system, as this will lower the vehicle’s braking effectiveness.
- Never tow a trailer without using a safety chain securely attached to both the trailer and the vehicle. If damage occurs to the coupling unit or hitch ball, there is danger of the trailer wandering into another lane.
When driving

NOTICE

■ When installing a trailer hitch
   Use only the position recommended by your Lexus dealer. Do not install the trailer hitch on the bumper; this may cause body damage.

■ Do not directly splice trailer lights
   Do not directly splice trailer lights. Directly splicing trailer lights may damage your vehicle’s electrical system and cause a malfunction.
Lexus does not recommend towing a trailer with your vehicle. Lexus also does not recommend the installation of a tow hitch or the use of a tow hitch carrier for a wheelchair, scooter, bicycle, etc. Your vehicle is not designed for trailer towing or for the use of tow hitch mounted carriers.
Your vehicle is not designed to be dinghy towed (with 4 wheels on the ground) behind a motor home.

⚠️ NOTICE

■ To avoid serious damage to your vehicle
   Do not tow your vehicle with four wheels on the ground.

Air outlets and fan speed are automatically adjusted according to the temperature setting.

- **Vehicles with a navigation system**
  Owners of models equipped with a navigation system should refer to the “Navigation System Owner’s Manual”.

- **Vehicles without a navigation system**

![Diagram of air conditioning system controls]
Using the automatic air conditioning system

**STEP 1** Press \[ AUTO \].

The air conditioning system begins to operate. Air outlets and fan speed are automatically adjusted according to the temperature setting.

**STEP 2** Press “\( \wedge \)” on \[ TEMP \] to increase the temperature and “\( \vee \)” to decrease the temperature.

When \[ DUAL \] is pressed (the indicator on \[ DUAL \] is on) or the passenger’s side temperature control button is pressed, the temperature for the driver and passenger seats can be adjusted separately.
3-1. Using the air conditioning system and defogger

Adjusting the settings manually

- **Basic setting**

  **STEP 1** To turn on the air conditioning system and adjust the fan speed, press “∧” on \( \text{OFF} \) to increase the fan speed and “OFF ∨” to decrease the fan speed.
  
  To turn the fan off, press and hold “OFF ∨” on \( \text{OFF} \).

  **STEP 2** To adjust the temperature setting, press “∧” on \( \text{TEMP} \) to increase the temperature and “∨” to decrease the temperature.
  
  When \( \text{DUAL} \) is pressed (the indicator on \( \text{DUAL} \) is on) or the passenger’s side temperature control button is pressed, the temperature for the driver and passenger seats can be adjusted separately.

  **STEP 3** To change the air outlets, press \( \text{MODE} \).

  The air outlets used are switched each time the button is pressed. The air flow shown on the display indicates the following:

  Air flows to the upper body.
Air flows to the upper body and feet.

Air flows to the feet.

Air flows to the feet and the windshield defogger operates.

Switching between outside air and recirculated air modes

Press .

The mode switches between outside air mode (the indicator is off) and recirculated air mode (the indicator is on) each time the button is pressed.
Defogging the windshield

Defogging

The air conditioning system operates automatically.
Recirculated air mode will automatically switch to outside air mode. It is not possible to return to recirculated air mode when the switch is on.

Adjusting the position of and opening and closing the air outlets

► Front center outlets

1 Direct air flow to the left or right, up or down.
2 Turn the knob to open or close the vent.

► Front side outlets

1 Direct air flow to the left or right, up or down.
2 Turn the knob to open or close the vent.
Rear outlets

1. Direct air flow to the left or right, up or down.
2. Turn the knob to open or close the vent.

Operation of the air conditioning system in Eco drive mode

In Eco drive mode, the air conditioning system is controlled as follows to prioritize fuel efficiency:

- Engine speed and compressor operation controlled to restrict heating/cooling capacity
- Fan speed restricted when automatic mode is selected

To improve air conditioning performance, perform the following operations:

- Adjust the fan speed
- Turn off Eco drive mode

Customization

The air conditioning control of Eco drive mode can be changed to the same setting as that used in normal drive mode.
(Customizable features → P. 693)

Air conditioning system settings

When the “POWER” switch is turned on, the air conditioning system settings will be set to those that were in use the last time the “POWER” switch was turned off.

- Air conditioning system settings are memorized individually on each electronic key, so the settings reproduced will be specific to the key that is used.
- This feature is customizable at your Lexus dealer.
3-1. Using the air conditioning system and defogger

■ Using automatic mode

Fan speed is adjusted automatically according to the temperature setting and ambient conditions. As a result, the following may occur:

Immediately after the button is pressed, the fan may stop for a while until warm or cool air is ready to flow.

■ Using the system in recirculated air mode

The windows will fog up more easily if recirculated air mode is used for an extended period.

■ Switching between outside air and recirculated air modes

Recirculated air mode or outside air mode may be automatically switched to in accordance with the temperature setting and the inside temperature.

■ Window defogger feature

Recirculated air mode may automatically switch to outside air mode in situations where the windows need to be defogged.

■ When outside air temperature is below 32°F (0°C)

The cooling and dehumidification function may not operate even when is pressed.

■ When the indicator light on flashes

Press to turn off the cooling and dehumidification function and turn it on again. There may be a problem in the air conditioning system if the indicator light continues to flash. Turn the air conditioning system off and have it inspected by your Lexus dealer.

■ Air conditioning odors

- During use, various odors from inside and outside the vehicle may enter into and accumulate in the air conditioning system. This may then cause odor to be emitted from the vents.

- To reduce potential odors from occurring:
  - It is recommended that the air conditioning system be set to outside air mode prior to turning the vehicle off.
  - The start timing of the blower may be delayed for a short period of time immediately after the air conditioning system is started in automatic mode.
CAUTION

To prevent the windshield from fogging up

Do not use during cool air operation in extremely humid weather. The difference between the temperature of the outside air and that of the windshield can cause the outer surface of the windshield to fog up, blocking your vision.

NOTICE

To prevent 12-volt battery discharge

Do not leave the air conditioning system on longer than necessary when the hybrid system is off.
Defoggers are used to defog the rear window, and to remove raindrops, dew and frost from the outside rear view mirrors.

- **Vehicles with a navigation system**
  Owners of models equipped with a navigation system should refer to the “Navigation System Owner’s Manual”.

- **Vehicles without a navigation system**

  Turns the rear window and outside rear view mirror defoggers on/off

  The defoggers will automatically turn off after 15 to 60 minutes. The operation time changes according to the ambient temperature and vehicle speed.

- **Operating conditions**
  The “POWER” switch must be in ON mode.

- **The outside rear view mirror defoggers**
  Turning the rear window defogger on will turn the outside rear view mirror defoggers on.

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
</table>

- **When the outside rear view mirror defoggers are on**
  Do not touch the outside surface of the rear view mirrors, as they can become very hot and burn you.
This feature is used to prevent ice from building up on the windshield and wiper blades.

- Vehicles with a navigation system
  Owners of models equipped with a navigation system should refer to the “Navigation System Owner’s Manual”.

- Vehicles without a navigation system
  Turns the windshield wiper de-icer on/off
  The windshield wiper de-icer will automatically turn off after approximately 15 minutes.

Operating conditions
The “POWER” switch must be in ON mode.

⚠️ CAUTION

- When the windshield wiper de-icer is on
  Do not touch the lower part of the windshield or the side of the front pillars, as the surfaces can become very hot and burn you.

*: If equipped

■ Using mobile phones

Interference may be heard through the audio system’s speakers if a mobile phone is being used inside or close to the vehicle while the audio system is operating.

⚠️ CAUTION

■ Certification

- Part 15 of the FCC Rules
  FCC Warning:
  Any unauthorized changes or modifications to this equipment will void the user’s authority to operate this device.

- Laser products
  • Do not take this unit apart or attempt to make any changes by yourself.
  This is an intricate unit that uses a laser pickup to retrieve information from the surface of compact discs. The laser is carefully shielded so that its rays remain inside the cabinet. Therefore, never try to disassemble the player or alter any of its parts since you may be exposed to laser rays and dangerous voltages.
  • This product utilizes a laser.
  Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

⚠️ NOTICE

■ To prevent 12-volt battery discharge

Do not leave the audio system on longer than necessary when the hybrid system is off.

■ To avoid damaging the audio system

Take care not to spill drinks or other fluids over the audio system.
3-2. Using the audio system

Using the radio

▲ Type A

- Channel category button
- Preset station buttons
- "PWR-VOL" knob
  - Power
  - Volume
- Seek button
- AM-FM/SAT mode buttons
- Frequency adjustment (AM/FM mode) and channel (SAT mode) knob
- Traffic information button
- Radio text message button
- Scan button
3-2. Using the audio system

Type B

- Channel category button
- Preset station buttons
- "PWR·VOL" knob (Power Volume)
- Seek button
- AM-FM/SAT mode buttons
- Frequency adjustment (AM/FM mode) and channel (SAT mode) knob
- Traffic information button
- Radio text message button
- Scan button
3-2. Using the audio system

Type C

- Preset tuning button
- Preset station buttons
- "PWR-VOL" knob
- Power Volume
- Seek button
- AM/FM mode buttons
- Frequency adjustment knob
- Mute button
- Scan button
Setting station presets (excluding XM® Satellite Radio)

**STEP 1** Search for the desired stations by turning or or pressing “∧” or “∨” on .

**STEP 2** Press and hold the button (from to ) the station is to be set to until you hear a beep.

Scanning radio stations (excluding XM® Satellite Radio)

- **Scanning the preset radio stations**
  
  **STEP 1** Press and hold until you hear a beep. Preset stations will be played for 5 seconds each.

  **STEP 2** When the desired station is reached, press the button again.

- **Scanning all the radio stations within range**
  
  **STEP 1** Press . All the stations with reception will be played for 5 seconds each.

  **STEP 2** When the desired station is reached, press the button again.
RDS (Radio Data System) (type A and B)

This feature allows your radio to receive station identification information and program information (classical, jazz, etc.) from radio stations which broadcast this information.

■ Receiving RDS broadcasts

**STEP 1** Press “∧” or “∨” on during FM reception.

The type of program changes each time the button is pressed.

- “ROCK”
- “EASYLIS” (Easy listening)
- “CLS/JAZZ” (Classical music and Jazz)
- “R & B” (Rhythm and Blues)
- “INFORM” (Information)
- “RELIGION”
- “MISC” (Miscellaneous)
- “ALERT” (Emergency messages)

If the system receives no RDS stations, “NO PTY” appears on the display.

**STEP 2** Press or “∧” or “∨” on .

The radio seeks or scans for stations of the relevant program type.
Displaying radio station names
Press TEXT.

Displaying radio text messages
Press TEXT twice.

A text message is displayed when “MSG” is shown on the screen.
If the text continues past the end of the display, ▶ is displayed. Press and hold TEXT until you hear a beep.

XM® Satellite Radio (type A and B)

Receiving XM® Satellite Radio

STEP 1
Press SAT.

The display changes as follows each time the button is pressed:
“SAT1” → “SAT2” → “SAT3”

STEP 2
Turn TUNE SEL to select the desired channel in all the categories or press “▲” or “▼” on SEEK TRACK to select the desired channel in the current category.

Setting XM® Satellite Radio channel presets
Select the desired channel. Press and hold the button (from 1 to 6) the channel is to be set to until you hear a beep.

Changing the channel category
Press “▲” or “▼” on TYPE DISC.
3-2. Using the audio system

- **Scanning the XM® Satellite Radio channels**
  - Scanning the channels in the current category
    
    **STEP 1** Press \[\text{SCAN}\].
    
    **STEP 2** When the desired channel is reached, press the button again.
  
  - Scanning the preset channels
    
    **STEP 1** Press and hold \[\text{SCAN}\] until you hear a beep.
    
    **STEP 2** When the desired channel is reached, press the button again.

- **Displaying text information**

  Press \[\text{TEXT}\].

  The display will show up to 10 characters.

  The display changes as follows each time the button is pressed:

  - **CH NAME**
  - **TITLE (SONG/PROGRAM TITLE)**
  - **NAME (ARTIST NAME/FEATURE)**
  - **CH NUMBER**
■ When the 12-volt battery is disconnected
   All preset stations are erased.

■ Reception sensitivity
   • Cargo loaded on the roof luggage carrier, especially metal objects, may adversely affect the reception of XM® Satellite Radio.
   • It is difficult to maintain perfect radio reception at all times due to the continually changing position of the antenna, differences in signal strength and surrounding objects, such as trains and transmitters.
   • The radio antenna is mounted inside the rear spoiler and the rear window. To maintain clear radio reception, do not attach metallic window tinting or other metallic objects to the antenna wire mounted inside the rear window.

■ Receiving XM® Satellite Radio
   An XM® Satellite Radio is a tuner designed exclusively to receive broadcasts provided under a separate subscription. Availability is limited to the 48 contiguous states and 10 Canadian provinces.
   • XM® subscriptions
   • Radio ID
     You will need the radio ID when activating XM® service or reporting a problem.
     Select “CH000” using , and the receiver’s 8-character ID number will appear.
   • Satellite tuner
     The tuner supports only Audio Services (Music and Talk) and the accompanying Text Information of XM® Satellite Radio.
If the satellite radio does not operate normally

If a problem occurs with the XM® tuner, a message will appear on the display. Refer to the table below to identify the problem, and take the suggested corrective action.

<table>

**Certifications for the radio tuner**

This equipment has been tested and found to comply with the limits for a class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by trying one or more of the following:

- Reorienting or relocate the receiving antenna.
- Increasing the separation between the equipment and receiver.
- Connecting the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consulting the dealer or an experienced radio/TV technician for help.

Loading a CD

**Loading a CD**

**STEP 1** Press .
“WAIT” is shown on the display.

**STEP 2** When the indicator on the slot turns from amber to green, insert a CD.
The display changes from “WAIT” to “LOAD”.

**Loading multiple CDs**

**STEP 1** Press and hold  until you hear a beep.
“WAIT” is shown on the display.

**STEP 2** When the indicator on the slot turns from amber to green, insert a CD.
The display changes from “WAIT” to “LOAD”.
The indicator on the slot turns to amber when the CD is being inserted.

**STEP 3** When the indicator on the slot turns from amber to green, insert the next CD.
Repeat the procedure for the remaining CDs.

To cancel the operation, press . If you do not insert a disc within 15 seconds, loading will be canceled automatically.
3-2. Using the audio system

**Ejecting CDs**

- **Ejecting a CD**
  
  **STEP 1**
  
  To select the CD to be ejected, press “∧” or “∨” on `TYPE DISC` or `CH DISC`.

  The selected disc number is shown on the display.

  **STEP 2**
  
  Press and remove the CD.

- **Ejecting all the CDs**

  Press and hold `DISC EJECT` until you hear a beep, and then remove the CDs.

**Selecting, fast-forwarding, reversing and scanning tracks**

- **Selecting a track**
  
  Press “∧” to move up or “∨” to move down using `SEEK TRACK` until the desired track number is displayed.

- **Fast-forwarding and reversing tracks**
  
  To fast-forward or reverse, press and hold “∧” or “∨” on `SEEK TRACK` until you hear a beep.

- **Scanning tracks**
  
  **STEP 1**
  
  Press `SCAN`.

  The first ten seconds of each track will be played.

  To cancel, press `SCAN` again.

  **STEP 2**
  
  Press the button again when the desired track is reached.
3-2. Using the audio system

**Selecting a CD**

- **Selecting a CD to play**
  To select the desired CD, press “∧” or “∨” on “
  TYPE DISC” or “
  CH DISC”.

- **Scanning loaded CDs**
  
  **STEP 1** Press and hold “SCAN” until you hear a beep.
  The first ten seconds of the first track on each CD will be played.
  To cancel, press “SCAN” again.
  
  **STEP 2** Press the button again when the desired CD is reached.

- **Playing and pausing tracks**
  To play or pause a track, press “

- **Random playback**

  - **Current CD**
    Press “
    
    Songs are played in random order.
    To cancel, press “

  - **All CDs**
    Press and hold “
    
    Tracks on all loaded CDs are played in random order.
    To cancel, press “

3-2. Using the audio system

Repeat play

- **Repeating a track**
  Press \[ \text{RPT} \].
  To cancel, press \[ \text{RPT} \] again.

- **Repeating all of the tracks on a CD**
  Press and hold \[ \text{RPT} \] until you hear a beep.
  To cancel, press \[ \text{RPT} \] again.

Switching the display

Press \[ \text{TEXT} \].

Each time the button is pressed, the display changes in the following order:
Elapsed time → CD title → Track title

- **CD player protection feature**
  To protect the internal components, playback is automatically stopped when a problem is detected.

- **Display**
  Up to 12 characters can be displayed at a time.
  If there are 13 or more characters, pressing and holding \[ \text{TEXT} \] until you hear a beep enables to display the remaining characters.
  A maximum of 24 characters can be displayed.
  If \[ \text{TEXT} \] is pressed until you hear a beep again or has not been operated for more than 6 seconds, the display will return to the first 12 characters.
  Depending on the contents recorded, the characters may not be displayed properly or may not be displayed at all.
When “ERROR” or “WAIT” is shown on the display

“ERROR”: This indicates a trouble either in the CD or inside the player. The CD may be dirty, damaged, or inserted up-side down.

“WAIT”:  This indicates that operation is stopped due to a high temperature inside the player. Wait for a while and then press \(\text{CD}\). If the CD still cannot be played back, contact your Lexus dealer.

Discs that can be used

Discs with the marks shown below can be used. Playback may not be possible depending on recording format or disc features, or due to scratches, dirt or deterioration.

CDs with copy-protection features may not be used.

Lens cleaners

Do not use lens cleaners. Doing so may damage the CD player.

If discs are left inside the CD player or in the ejected position for extended periods of time

The discs may be damaged and may not play properly.
**NOTICE**

**CDs and adapters that cannot be used**

Do not use the following types of CDs, 3 in. (8 cm) CD adapters or Dual Discs. Doing so may damage the CD player and/or the CD load/eject function.

- CDs that have a diameter that is not 4.7 in. (12 cm)
- Low-quality and deformed CDs
- CDs with a transparent or translucent recording area
- CDs that have had tape, stickers or CD-R labels attached to them, or that have had the label peeled off
NOTICE

CD player precautions

Failure to follow the precautions below may result in serious damage to the CDs or the player itself.

- Do not insert anything other than CDs into the CD slot.
- Do not apply oil to the CD player.
- Store CDs away from direct sunlight.
- Never try to disassemble any part of the CD player.

- Do not insert more than one CD at a time.

  → P. 353
**MP3 and WMA files**

MP3 (MPEG Audio Layer 3) is a standard audio compression format.
Files can be compressed to approximately 1/10 of their original size by using MP3 compression.

WMA (Windows Media Audio) is a Microsoft audio compression format.
This format compresses audio data to a size smaller than that of the MP3 format.
There is a limit to the MP3 and WMA file standards that can be used and to the media/formats on which the files are recorded.

- **MP3 file compatibility**
  - Compatible standards
    MP3 (MPEG Layer3, MPEG2 LSF Layer3)
  - Compatible sampling frequencies
    MPEG1 Layer3: 32, 44.1, 48 (kHz)
    MPEG2 LSF Layer3: 16, 22.05, 24 (kHz)
  - Compatible bit rates (compatible with VBR)
    MPEG1 Layer3: 64, 80, 96, 112, 128, 160, 192, 224, 256, 320 (kbps)
    MPEG2 LSF Layer3: 64, 80, 96, 112, 128, 144, 160 (kbps)
  - Compatible channel modes: stereo, joint stereo, dual channel and monaural

- **WMA file compatibility**
  - Compatible standards
    WMA Ver. 7, 8, 9
  - Compatible sampling frequencies
    32, 44.1, 48 (kHz)
  - Compatible bit rates (only compatible with 2-channel playback)
    Ver. 7, 8: CBR 48, 64, 80, 96, 128, 160, 192 (kbps)
    Ver. 9: CBR 48, 64, 80, 96, 128, 160, 192, 256, 320 (kbps)

- **Compatible media**

  Media that can be used for MP3 and WMA playback are CD-Rs and CD-RWs.
  Playback in some instances may not be possible if the CD-R or CD-RW is not finalized. Playback may not be possible or the audio may jump if the disc is scratched or marked with fingerprints.
3-2. Using the audio system

● Compatible disc formats

The following disc formats can be used:

- Disc formats: CD-ROM Mode 1 and Mode 2
  - CD-ROM XA Mode 2, Form 1 and Form 2
- File formats: ISO9660 Level 1, Level 2, (Romeo, Joliet)

MP3 and WMA files written in any format other than those listed above may not play correctly, and their file names and folder names may not be displayed correctly.

Items related to standards and limitations are as follows:

- Maximum directory hierarchy: 8 levels (including the root)
- Maximum length of folder names/file names: 32 characters
- Maximum number of folders: 192 (including the root)
- Maximum number of files per disc: 255

● File names

The only files that can be recognized as MP3/WMA and played are those with the extension .mp3 or .wma.

● Discs containing multi-session recordings

As the audio system is compatible with multi-sessions, it is possible to play discs that contain MP3 and WMA files. However, only the first session can be played.

● ID3 and WMA tags

ID3 tags can be added to MP3 files, making it possible to record the track title, artist name, etc.

The system is compatible with ID3 Ver. 1.0, 1.1, and Ver. 2.2, 2.3 ID3 tags. (The number of characters is based on ID3 Ver. 1.0 and 1.1.)

WMA tags can be added to WMA files, making it possible to record the track title and artist name in the same way as with ID3 tags.
MP3 and WMA playback

When a disc containing MP3 or WMA files is inserted, all files on the disc are first checked. Once the file check is finished, the first MP3 or WMA file is played. To make the file check finish more quickly, we recommend you do not write in any files other than MP3 or WMA files or create any unnecessary folders.

Discs that contain a mixture of music data and MP3 or WMA format data cannot be played.

Extensions

If the file extensions .mp3 and .wma are used for files other than MP3 and WMA files, they will be mistakenly recognized and played as MP3 and WMA files. This may result in large amounts of interference and damage to the speakers.

Playback

• To play MP3 files with steady sound quality, we recommend a fixed bit rate of at least 128 kbps and a sampling frequency of 44.1 kHz.
• CD-R or CD-RW playback may not be possible in some instances, depending on the characteristics of the disc.
• There is a wide variety of freeware and other encoding software for MP3 and WMA files on the market, and depending on the status of the encoding and the file format, poor sound quality or noise at the start of playback may result. In some cases, playback may not be possible at all.
• When files other than MP3 or WMA files are recorded on a disc, it may take more time to recognize the disc and in some cases, playback may not be possible at all.
• Microsoft, Windows, and Windows Media are registered trademarks of Microsoft Corporation in the U.S.A. and other countries.

### About iPod
- Apple is not responsible for the operation of this device or its compliance with safety and regulatory standards.
- iPod is a trademark of Apple Inc., registered in the U.S. and other countries.

### iPod functions
- When an iPod is connected and the audio source is changed to iPod mode, the iPod will resume play from the same point in which it was last used.
- Depending on the iPod that is connected to the system, certain functions may not be available. If a function is unavailable due to a malfunction (as opposed to a system specification), disconnecting the device and reconnecting it once again may resolve the problem.
- While connected to the system, the iPod cannot be operated with its own controls. It is necessary to use the controls of the vehicle’s audio system instead.

### iPod problems
To resolve most problems encountered when using your iPod, disconnect your iPod from the vehicle iPod connection and reset it.
For instructions on how to reset your iPod, refer to your iPod Owner’s Manual.

### Display

  - Correspondence class: Mass storage class
  MP3 and WMA files written in any format other than those listed above may not play correctly, and their file names and folder names may not be displayed correctly.

Items related to standards and limitations are as follows:
- Maximum directory hierarchy: 8 levels
- Maximum number of folders in a device: 999 (including the root)
- Maximum number of files in a device: 65025
- Maximum number of files per folder: 255

- MP3 and WMA files
  MP3 (MPEG Audio LAYER 3) is a standard audio compression format.
  Files can be compressed to approximately 1/10 of their original size using MP3 compression.
  WMA (Windows Media Audio) is a Microsoft audio compression format.
  This format compresses audio data to a size smaller than that of the MP3 format.
  There is a limit to the MP3 and WMA file standards that can be used and to the media/formats on which the files are recorded.
3-2. Using the audio system

● MP3 file compatibility
  • Compatible standards
    MP3 (MPEG1 AUDIO LAYER II, III, MPEG2 AUDIO LAYER II, III, MPEG2.5)
  • Compatible sampling frequencies
    MPEG1 AUDIO LAYER II, III: 32, 44.1, 48 (kHz)
    MPEG2 AUDIO LAYER II, III: 16, 22.05, 24 (kHz)
    MPEG2.5: 8, 11.025, 12 (kHz)
  • Compatible bit rates (compatible with VBR)
    MPEG1 AUDIO LAYER II, III: 32-320 (kbps)
    MPEG2 AUDIO LAYER II, III: 32-160 (kbps)
    MPEG2.5: 32-160 (kbps)
  • Compatible channel modes: stereo, joint stereo, dual channel and monaural

● WMA file compatibility
  • Compatible standards
    WMA Ver. 9
  • Compatible sampling frequencies
    HIGH PROFILE 32, 44.1, 48 (kHz)
  • Compatible bit rates
    HIGH PROFILE 32-320 (kbps, VBR)

● File names
  The only files that can be recognized as MP3/WMA and played are those with the extension .mp3 or .wma.

● ID3 and WMA tags
  ID3 tags can be added to MP3 files, making it possible to record the track title, artist name, etc.
  The system is compatible with ID3 Ver. 1.0, 1.1, and Ver. 2.2, 2.3, 2.4 ID3 tags. (The number of characters is based on ID3 Ver. 1.0 and 11.)
  WMA tags can be added to WMA files, making it possible to record the track title and artist name in the same way as with ID3 tags.
MP3 and WMA playback

- When a device containing MP3 or WMA files is connected, all files in the USB memory device are checked. Once the file check is finished, the first MP3 or WMA file is played. To make the file check finish more quickly, we recommend that you do not include any files other than MP3 or WMA files or create any unnecessary folders.
- When the USB device is connected and the audio source is changed to USB memory mode, the USB device will start playing the first file in the first folder. If the same device is removed and reinserted (and the contents have not been changed), the USB device will resume play from the same point in which it was last used.

Extensions

If the file extensions .mp3 and .wma are used for files other than MP3 and WMA files, they will be skipped (not played).

Playback

- To play MP3 files with steady sound quality, we recommend a fixed bit rate of at least 128 kbps and a sampling frequency of 44.1 kHz.
- There is a wide variety of freeware and other encoding software for MP3 and WMA files on the market, and depending on the status of the encoding and the file format, poor sound quality or noise at the start of playback may result. In some cases, playback may not be possible at all.
- Microsoft, Windows, and Windows Media are registered trademarks of Microsoft Corporation in the U.S.A. and other countries.

CAUTION

Caution while driving

Do not connect USB memories or operate the controls.
### NOTICE

**To prevent damage to USB memories**

- Do not leave USB memories in the vehicle. The temperature inside the vehicle may become high, resulting in damage to the player.
- Do not push down on or apply unnecessary pressure to the USB memory while it is connected as this may damage the USB memory or its terminal.
- Do not insert foreign objects into the port as this may damage the USB memory or its terminal.
3-2. Using the audio system
Optimal use of the audio system

► Type A and B

1 Displays the current mode
2 Changes the following settings:
   • Sound quality and volume balance
     → P. 384
     The sound quality and balance setting can be changed to produce the best sound.
   • Automatic Sound Levelizer on/off
     → P. 385

► Type C
3-2. Using the audio system

**Adjusting sound quality and volume balance**

■ Changing sound quality modes

Press \( \text{ or } \) .

Pressing the button changes sound modes in the following order:

“BAS” → “MID” → “TRE” → “FAD” → “BAL” → “ASL”

■ Adjusting sound quality

Turning \( \text{ or } \) adjusts the level.

<table>
<thead>
<tr>

*: The sound quality level is adjusted individually in each audio mode.
Turning the Automatic Sound Levelizer (ASL) on/off

Turning or counterclockwise turns on the ASL, and turning or clockwise turns off the ASL.

ASL automatically adjusts the volume and tone quality according to the noise level as you drive your vehicle.
This port can be used to connect a portable audio device and listen to it through the vehicle’s speakers.

**STEP 1**
Slide the armrest while pulling up the lever, and lift the armrest. Remove the upper trays (if equipped).

**STEP 2**
Remove the lower tray.

**STEP 3**
Open the cover and connect the portable audio device.

**STEP 4** Press AUX or AUX.
■ Operating portable audio devices connected to the audio system
  The volume can be adjusted using the vehicle’s audio controls. All other adjustments must be made on the portable audio device itself.

■ When using a portable audio device connected to the power outlet
  Noise may occur during playback. Use the power source of the portable audio device.

■ Routing portable audio device cables
  → P. 372
Some audio features can be controlled using the switches on the steering wheel.

1. Turns the power on, selects an audio source
2. Increases/decreases volume
3. Radio mode: Selects a radio station
   CD mode: Selects a track, file (MP3 and WMA) and disc
   Bluetooth® audio mode (type A and B):
   Selects a track and album
   iPod mode (type A and C):
   Selects a song
   USB memory mode (type A and C):
   Selects a file and folder

**Turning the power on**

Press 🎧 when the audio system is turned off.

The audio system can be turned off by holding the switch down until you hear a beep.
3-2. Using the audio system

### Changing the audio source

Press [ ] when the audio system is turned on. The audio source changes as follows each time the button is pressed. If no discs are inserted in the player, that mode will be skipped.

**Type A:**
- FM1 → FM2 → SAT1 → SAT2 → SAT3 → CD player → Bluetooth® audio → AUX → iPod or USB memory → AM → FM1

**Type B:**
- FM1 → FM2 → SAT1 → SAT2 → SAT3 → CD player → Bluetooth® audio → AUX → AM → FM1

**Type C:**
- FM1 → FM2 → CD player → AUX → iPod or USB memory → AM → FM1

### Adjusting the volume

Press “+” on [ ] to increase the volume and “-” to decrease the volume.

Hold down the button to continue increasing or decreasing the volume.

### Selecting a radio station

**STEP 1** Press [ ] to select radio mode.

**STEP 2** Press “∧” or “∨” on [ ] to select a radio station.

To scan for receivable stations, press and hold “∧” or “∨” on the button until you hear a beep.

### Selecting a track/file or song

**STEP 1** Press [ ] to select CD, Bluetooth® audio (type A and B), iPod (type A and C) or USB memory (type A and C) mode.

**STEP 2** Press “∧” or “∨” on [ ] to select the desired track/file or song.
Selecting an album (type A and B)

**STEP 1** Press 🎵 to select Bluetooth® audio mode.
**STEP 2** Press and hold “▲” or “▼” on 🎵 until you hear a beep.

Selecting a folder (type A and C)

**STEP 1** Press 🎵 to select USB memory mode.
**STEP 2** Press and hold “▲” or “▼” on 🎵 until you hear a beep.

Selecting a disc in the CD player

**STEP 1** Press 🎵 to select CD mode.
**STEP 2** Press and hold “▲” or “▼” on 🎵 until you hear a beep.

Canceling automatic selection of a radio station

Press 🎵 again.

⚠️ CAUTION

- **To reduce the risk of an accident**
  
  Exercise care when operating the audio switches on the steering wheel.
The Bluetooth® audio system enables you to enjoy music played on a portable digital audio player (portable player) from the vehicle speakers via wireless communication.

This audio system supports Bluetooth®, a wireless data system capable of playing portable audio music without cables. If your portable player does not support Bluetooth®, the Bluetooth® audio system will not function.

- **Vehicles with a navigation system**
  Owners of models equipped with a navigation system should refer to the “Navigation System Owner's Manual”.

- **Vehicles without a navigation system**

**Conditions under which the system will not operate**

- If using a portable player that does not support Bluetooth®
- If the portable player is switched off
- If the portable player is not connected
- If the portable player’s battery is low
- If the portable player is behind the seat or in the glove box or console box
- If metal is covering or touching the portable player

*: If equipped
When transferring ownership of the vehicle

Be sure to initialize the system to prevent personal data from being improperly accessed. (→ P. 437)

About Bluetooth®

Bluetooth is a registered trademark of Bluetooth SIG. Inc.

Compatible models

- Bluetooth® specifications:
  Ver. 1.1, or higher (Recommended: Ver. 1.2)

- Following profiles:
  - A2DP (Advanced Audio Distribution Profile) Ver. 1.0, or higher (Conformed: Ver. 1.2)
  - AVRCP (Audio/Video Remote Control Profile) Ver. 1.0 or higher (Conformed: Ver. 1.3)

Portable players must correspond to the above specifications in order to be connected to the Bluetooth® audio system. However, please note that some functions may be limited depending on the type of portable player.

Certification for the Bluetooth® audio system

FCC ID: AJDK018
IC ID: 775E-K018
MADE IN JAPAN

This device complies with Part 15 of the FCC Rules and RSS-Gen of IC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.
CAUTION

■ FCC WARNING
Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Radio Frequency Radiation Exposure. This equipment complies with FCC radiation exposure limits set forth for uncontrolled equipment and meets the FCC radio frequency (RF) Exposure Guidelines in Supplement C to OET65. This equipment has very low levels of RF energy that it deemed to comply without maximum permissive exposure evaluation (MPE). But it is desirable that it should be installed and operated with at least 7.9 in. (20 cm) and more between the radiator and person's body (excluding extremities: hands, wrists, feet and ankles).

This transmitter must not be co-located or operated in conjunction with any other antenna or transmitter.

■ Caution while driving
Do not connect portable players or operate the controls.

NOTICE

■ To prevent damage to portable players
Do not leave portable players in the vehicle. The temperature inside the vehicle may become high, resulting in damage to the player.
3-3. Using the Bluetooth® audio system

Using the Bluetooth® audio system

Audio unit

1 Display
A message, name, number, etc. is displayed.
Lower-case characters and special characters cannot be displayed.

2 Displays information that is too long to be displayed at one time on the display (press and hold)

3 Selects items such as menu and number
Turn: Selects an item
Press: Inputs the selected item

4 Bluetooth® connection condition
If “BT” is not displayed, the Bluetooth® audio system cannot be used.
3-3. Using the Bluetooth® audio system

## Operating the system using voice commands

By following voice guidance instructions output from the speaker, voice commands enable the operation of the Bluetooth® audio system without the need to check the display or operate manually.

### Operation procedure when using voice commands

Press the talk switch and follow voice guidance instructions.

### Auxiliary commands when using voice commands

The following auxiliary commands can be used when operating the system using a voice command:

- “Cancel”: Exits the Bluetooth® audio system
- “Repeat”: Repeats the previous voice guidance instruction
- “Go back”: Returns to the previous procedure
- “Help”: Reads aloud the function summary if a help comment is registered for the selected function
Using the Bluetooth® audio system for the first time

Before using the Bluetooth® audio system, it is necessary to register a Bluetooth® enabled portable player in the system. Follow the procedure below to register (pair) a portable player:

**STEP 1** Press and select “BT•A MENU” using .

**STEP 2** Press the talk switch or select “BT•A Setup” using .

The introductory guidance and portable player name registration instructions are heard.

**STEP 3** Select “Pair Audio Player (Pair Audio)” using a voice command or .

**STEP 4** Register a portable player name by either of the following methods:

   a. Select “Record Name” using , and say the name to be registered.
   b. Press the talk switch and say the name to be registered.

A voice guidance instruction to confirm the input is heard.

**STEP 5** Select “Confirm” using a voice command or .

A passkey is displayed and heard, and a voice guidance instruction for inputting the passkey into the portable player is heard.

**STEP 6** Input the passkey into the portable player.

Refer to the manual that comes with the portable player for the operation of the portable player.
Guidance for registration completion is heard.

If the portable player has a Bluetooth® phone, the phone can be registered at the same time. A voice guidance instruction to register a Bluetooth® phone is heard.

**STEP 7** Select “Yes” or “No” using a voice command or .
(Bluetooth® phone → P. 413)

- Deleting a registered portable player
  “Delete Audio Player (Delete Audio)”
### Registering a portable player

Select “Pair Audio Player (Pair Audio)” using a voice command or , and perform the procedure for registering a portable player. (→P. 396)

### Selecting a portable player to be used

| STEP 1 | Select “Connect Audio Player (Connect)” using a voice command or . |
| Pattern A |

| STEP 2 | Select the portable player to be used by either of the following methods, and select “Confirm” by using a voice command or : |
| Pattern A |

a. Press the talk switch and say the name of the desired portable player.

b. Press the talk switch and say “List Audio Players”. When the name of the desired portable player is read aloud, press the talk switch.

| Pattern B |

| STEP 2 | Select the portable player to be used using . |
3-3. Using the Bluetooth® audio system

Pattern A

STEP 3 Press the talk switch and say “From Car” or “From Audio player”, and select “Confirm” by using a voice command or .

Pattern B

STEP 3 Select “From Car” or “From Audio”, using .

If “From Car” is selected, the portable player will be automatically connected whenever the “POWER” switch is in either ACCESSORY or ON mode.

Changing the registered name of a portable player

STEP 1 Select “Change Name” using a voice command or .

Pattern A

STEP 2 Select the name of the portable player to be changed by either of the following methods, and select “Confirm” using a voice command or :

a. Press the talk switch and say the name of desired portable player.

b. Press the talk switch and say “List Audio Players”. When the name of the desired portable player is read aloud, press the talk switch.
Pattern B

STEP 2 Select the desired portable player name to be changed using

STEP 3 Press the talk switch or select “Record Name” using , and say the new name.

STEP 4 Select “Confirm” using a voice command or .

Listing the registered portable players

Select “List Audio Players (List Audios)” using a voice command or . The list of registered portable players will be read aloud. When listing is complete, the system returns to “BT•A Setup”.

Pressing the talk switch while the name of a portable player is being read aloud selects the portable player, and the following functions will become available:

- Selecting a portable player: “Connect Audio Player (Connect)”
- Changing a registered name: “Change Name”
- Deleting a portable player: “Delete Audio Player (Delete Audio)”
Changing the passkey

**STEP 1** Select “Set Passkey” using a voice command or .

> Pattern A

**STEP 2** Press the talk switch, say a 4 to 8-digit number, and select “Confirm” using a voice command or .

> Pattern B

**STEP 2** Select a 4 to 8-digit number using .

The number should be input 1 digit at a time.

**STEP 3** When the entire number to be registered as a passkey has been input, press again.

If the number to be registered has 8 digits, pressing of the knob is not necessary.
Deleting a registered portable player

**STEP 1** Select “Delete Audio Player (Delete Audio)” using a voice command or .

▶ Pattern A

**STEP 2** Select the portable player to be deleted by either of the following methods and select “Confirm” using a voice command or :

a. Press the talk switch and say the name of the desired portable player.

b. Press the talk switch and say “List Audio Players”. When the name of the desired portable player is read aloud, press the talk switch.

▶ Pattern B

**STEP 2** Select the desired portable player to be deleted using .

If the portable player to be deleted is paired as a Bluetooth® phone, the registration of the mobile phone can be deleted at the same time. A voice guidance instruction to delete a mobile phone is heard.

**STEP 3** Select “Yes” or “No” using a voice command or .

(Bluetooth® phone → P. 413)

---

**The number of portable players that can be registered**

Up to 2 portable players can be registered in the system.
3-3. Using the Bluetooth® audio system

Bluetooth® audio system setup

■ System setup items and operation procedures

► Pattern A
To enter the menu for each function, follow the steps below using a voice command or:

(→P. 434)

► Pattern B

STEP 1 Press to select “BT·A MENU”.

STEP 2 Select “System Setup” using .

STEP 3 Select one of the following items using:

● Setting voice guidance volume “Guidance Vol” (→P. 436)

● Displaying the Bluetooth® device address and name “Device Name” (→P. 436)

● Initializing the system “Initialize” (→P. 437)
The hands-free system is a function that allows you to use your mobile phone without touching it.

This system supports Bluetooth® mobile phones. Bluetooth® is a wireless data system that allows the mobile phone to wirelessly connect to the hands-free system and make/receive calls.

► Vehicles with a navigation system
Owners of models equipped with a navigation system should refer to the “Navigation System Owner's Manual”.

3-4. Using the hands-free phone system (for mobile phones)

■ Automatic volume adjustment
    When vehicle speed reaches 50 mph (80 km/h) or more, the volume automatically increases. The volume returns to the previous volume setting when vehicle speed drops to 43 mph (70 km/h) or less.

■ When using a voice command
    For numbers, say a combination of single digits from zero to nine, # (pound), * (star), and + (plus).
    Say the command correctly and clearly.

■ Situations in which the system may not recognize your voice
  ● When driving on rough roads
  ● When driving at high speeds
  ● When air is blowing out of the vents onto the microphone
  ● When the air conditioning fan emits a loud noise

■ Operations that cannot be performed while driving
  ● Operating the system with
  ● Registering a mobile phone to the system

■ Changing the passkey
  → P. 431
3-4. Using the hands-free phone system (for mobile phones)
Making a phone call

- Making a phone call
  - Dialing by inputting a number
    “Dial by number”
  - Dialing by inputting a name
    “Dial by name”
  - Speed dialing
  - Dialing a number stored in the outgoing history memory
    “Redial”
  - Dialing a number stored in the incoming history memory
    “Call back”

- Receiving a phone call
  - Answering a phone call
  - Refusing a phone call

- Transferring a phone call
- Call waiting

- Using the call history memory
  - Dialing
  - Storing number in the phone book
  - Deleting
3-4. Using the hands-free phone system (for mobile phones)

**Dialing by inputting a number**

**STEP 1** Press the talk switch and say “Dial by number”.
**STEP 2** Press the talk switch and say the phone number.
**STEP 3** Dial by one of the following methods:
   a. Press the off-hook switch.
   b. Press the talk switch and say “Dial”.
   c. Select “Dial” using .

**Dialing by inputting a name**

**STEP 1** Press the talk switch and say “Dial by name”.
**STEP 2** Select a registered name to be input by either of the following methods:
   a. Press the talk switch and say a registered name.
   b. Press the talk switch and say “List Names”. Press the talk switch when the desired name is read aloud.
**STEP 3** Dial by one of the following methods:
   a. Press the off-hook switch.
   b. Press the talk switch and say “Dial”.
   c. Select “Dial” using .

**Speed dialing**

**STEP 1** Press the off-hook switch.
**STEP 2** Press the preset button in which the desired number is registered.
**STEP 3** Press the off-hook switch.
When receiving a phone call

- **Answering a phone call**
  Press the off-hook switch.

- **Refusing a phone call**
  Press the on-hook switch.

Transferring a phone call

A call can be transferred between the mobile phone and system while dialing, receiving a call, or during a call. Use one of the following methods:

- Operate the mobile phone.
  Refer to the manual that comes with the mobile phone for the operation of the phone.
- Press the off-hook switch *1.
- Press the talk switch and say “Call Transfer”*2.

*1: This operation can be performed only when transferring a call from the mobile phone to the system during a call.

*2: While the vehicle is in motion, calls cannot be transferred from the system to the mobile phone.

Call waiting

When a call is interrupted by an incoming call from a third party, the following options will become available:

- Answer the incoming call: Press the off-hook switch. (Press the off-hook switch again as necessary to switch back and forth between calls.)
- Refuse the incoming call: Press the on-hook switch.
Using the call history memory

Follow the procedure below to use a number stored in the call history memory:

**STEP 1** Press the talk switch and say “Redial” (when using a number stored in the outgoing call history memory) or “Call back” (when using a number stored in the incoming call history memory).

**STEP 2** Select the number by either of the following methods:
   a. Say “Previous” or “Go back” until the desired number is displayed.
   b. Select the desired number using .

**STEP 3** The following operations can be performed:
   Dialing: Press the off-hook switch or select “Dial” using a voice command or .
   Storing the number in the phone book: Select “Store” and then “Confirm” using a voice command or .
   Deleting: Select “Delete” and then “Confirm” using a voice command or .
■ Call waiting
  ● If your phone does not support HFP Ver. 1.5, this function cannot be used.
  ● Call waiting operation may differ depending on your mobile phone and service provider.

■ Call history
  Up to 5 numbers can be stored in each of the outgoing and incoming call history memories.

■ When talking on the phone
  ● Do not talk at the same time as the other party.
  ● Keep the volume of the incoming voice down. Otherwise, voice echo will increase.
3-4. Using the hands-free phone system (for mobile phones)

Setting a mobile phone

Registering a mobile phone in the hands-free phone system allows the system to function. The following functions can be used for registered mobile phones:

### Functions and operation procedures

To enter the menu for each function, follow the steps below using a voice command or:

- **Registering a mobile phone**
  1. “Setup” → 2. “Phone Setup” → 3. “Pair Phone”

- **Selecting a mobile phone to be used**
  1. “Setup” → 2. “Phone Setup” → 3. “Connect Phone (Connect)”

- **Changing the registered name of a mobile phone**
  1. “Setup” → 2. “Phone Setup” → 3. “Change Name”

- **Listing the registered mobile phones**

- **Changing the passkey**

- **Deleting a registered mobile phone**
Registering a mobile phone

Select “Pair Phone” using a voice command or , and perform the procedure for registering a mobile phone. (→P. 418)

Selecting a mobile phone to be used

**STEP 1** Select “Connect Phone (Connect)” using a voice command or .

- Pattern A

**STEP 2** Select the mobile phone to be used by either of the following methods, and select “Confirm” by using a voice command or :

a. Press the talk switch and say the name of the desired mobile phone.

b. Press the talk switch and say “List Phones”. When the name of the desired mobile phone is read aloud, press the talk switch.

- Pattern B

**STEP 2** Select the mobile phone to be used using .
Changing the registered name of a mobile phone

**STEP 1** Select “Change Name” using a voice command or .

► Pattern A

**STEP 2** Select the name of the mobile phone to be changed by either of the following methods, and select “Confirm” using a voice command or :

a. Press the talk switch and say the name of the desired mobile phone.

b. Press the talk switch and say “List Phones”. When the name of the desired mobile phone is read aloud, press the talk switch.

► Pattern B

**STEP 2** Select the desired mobile phone name to be changed using .

**STEP 3** Press the talk switch or select “Record Name” using , and say the new name.

**STEP 4** Select “Confirm” using a voice command or .
3-4. Using the hands-free phone system (for mobile phones)

### Listing the registered mobile phones

Select “List Phones” using a voice command or . The list of registered mobile phones will be read aloud. When listing is complete, the system returns to “Phone Setup”.

Pressing the talk switch while the name of a mobile phone is being read aloud selects the mobile phone, and the following functions will become available:

- Selecting a mobile phone: “Connect Phone (Connect)”
- Changing a registered name: “Change Name”
- Deleting a mobile phone: “Delete Phone”

### Changing the passkey

**STEP 1** Select “Set Passkey” using a voice command or .

**Pattern A**

**STEP 2** Press the talk switch, say a 4 to 8-digit number, and select “Confirm” using a voice command or .
3-4. Using the hands-free phone system (for mobile phones)

► Pattern B

**STEP 2** Select a 4 to 8-digit number using .

The number should be input 1 digit at a time.

**STEP 3** When the entire number to be registered as a passkey has been input, press again.

If the number to be registered has 8 digits, pressing of the knob is not necessary.

**Deleting a registered mobile phone**

**STEP 1** Select “Delete Phone” using a voice command or .

► Pattern A

**STEP 2** Select the mobile phone to be deleted by either of the following methods and select “Confirm” using a voice command or :

a. Press the talk switch and say the name of the desired mobile phone.

b. Press the talk switch and say “List Phones”. When the name of the desired mobile phone is read aloud, press the talk switch.
Pattern B

STEP 2 Select the desired mobile phone to be deleted using .

If the mobile phone to be deleted is paired as a Bluetooth® audio player, the registration of the audio player can be deleted at the same time. A voice guidance instruction to delete a Bluetooth® audio player is heard.

STEP 3 Select “Yes” or “No” using a voice command or .

(Bluetooth® audio player → P. 392)

The number of mobile phones that can be registered
Up to 6 mobile phones can be registered in the system.
Security and system setup

Security setting items and operation procedures
To enter the menu for each function, follow the steps below using a voice command or :

● Setting or changing the PIN (Personal Identification Number)

● Locking the phone book

● Unlocking the phone book

System setup items and operation procedures
To enter the menu for each function, follow the steps below using :

● Setting voice guidance volume

● Displaying the Bluetooth® device address and name

● Initializing the system
3-4. Using the hands-free phone system (for mobile phones)

Setting or changing the PIN

■ Setting a PIN

**STEP 1** Select “Set PIN” using a voice command or .

**STEP 2** Enter a PIN using a voice command or .

When using , input the code 1 digit at a time.

■ Changing the PIN

**STEP 1** Select “Set PIN” using a voice command or .

**STEP 2** Enter the registered PIN using a voice command or .

**STEP 3** Enter a new PIN using a voice command or .

When using , input the code 1 digit at a time.

Locking or unlocking the phone book

**STEP 1** Select “Phonebook Lock (Phbk Lock)” or “Phonebook Unlock (Phbk Unlock)” using a voice command or .
3-4. Using the hands-free phone system (for mobile phones)

**STEP 2** Input the PIN by either of the following methods and select “Confirm” using a voice command or:

a. Press the talk switch and say the registered PIN.

b. Input a new PIN using .

Setting voice guidance volume

**STEP 1** Select “Guidance Vol” using .

**STEP 2** Change the voice guidance volume.

To decrease the volume: Turn counterclockwise.

To increase the volume: Turn clockwise.

Displaying the Bluetooth® device address and name

**STEP 1** Select “Device Name” using .

**STEP 2** Turn to display the Bluetooth® device address and name.

**STEP 3** Select “Go Back” using to return to “System Setup”.

436
Initializing the system

**STEP 1** Select “Initialize” and then “Confirm” using .

**STEP 2** Select “Confirm” again using .

---

**Initialization**

- The following data in the system can be initialized:
  - Phone book
  - Outgoing and incoming call history
  - Speed dials
  - Registered mobile phone data
  - Security code
  - Registered Bluetooth® enabled portable player data
  - Passkey for the mobile phones
  - Passkey for the Bluetooth® audio players
  - Guidance volume
  - Receiver volume
  - Ring tone volume

- Once the initialization has been completed, the data cannot be restored to its original state.

**When the phone book is locked**

The following functions cannot be used:

- Dialing by inputting a name
- Speed dialing
- Dialing a number stored in the call history memory
- Using the phone book
3-4. Using the hands-free phone system (for mobile phones)

Using the phone book

To enter the menu for each function, follow the steps below using a voice command or:

- Adding a new phone number
  1. “Phonebook” → 2. “Add Entry”

- Changing the registered name in the phone book
  1. “Phonebook” → 2. “Change Name”

- Listing the registered data

- Setting speed dials
  1. “Phonebook” → 2. “Set Speed Dial (Speed Dial)”

- Deleting the registered data

- Deleting speed dials
  1. “Phonebook” → 2. “Delete Speed Dial (Del Spd Dial)”

Adding a new phone number

The following methods can be used to add a new phone number:

- Inputting a phone number using a voice command

- Transferring data from the mobile phone

- Inputting a phone number using

- Selecting a phone number from outgoing or incoming call history
Adding procedure

STEP 1 Select “Add Entry” using a voice command or .

STEP 2 Use one of the following methods to input a telephone number:

Inputting a telephone number using a voice command:

STEP2-1 Select “By Voice” using a voice command or .

STEP2-2 Press the talk switch, say the desired number, and select “Confirm” using a voice command.

Transferring data from the mobile phone:

STEP2-1 Select “By Phone” and then “Confirm” using a voice command or .

STEP2-2 Transfer the data from the mobile phone.

Refer to the manual that comes with the mobile phone for details on transferring data.

STEP2-3 Select the data to be registered by either of the following methods:

a. Say “Previous” or “Next” until the desired data is displayed, and select “Confirm” using a voice command.

b. Select the desired data using .
Inputting a phone number using : 

STEP2-1 Select “Manual Input” using . 

STEP2-2 Input a phone number using , and press again. 

Input the phone number 1 digit at a time. 

Selecting a phone number from the outgoing or incoming call history: 

STEP2-1 Select “Call History” using a voice command or . 

STEP2-2 Select “Outgoing” or “Incoming” using a voice command or . 

STEP2-3 Select the data to be registered by either of the following methods: 

a. Say “Previous” or “Go back” until the desired data is displayed, and select “Confirm” using a voice command. 

b. Select the desired data using .
3-4. Using the hands-free phone system (for mobile phones)

**STEP 3** Select the name to be registered by either of the following methods, and select “Confirm” using a voice command or:

a. Press the talk switch and say the desired name.

b. Select “Record Name” using and say the desired name.

**STEP 4** Select “Confirm” using a voice command or .

In **STEP 4**, selecting “Set Speed Dial (Speed Dial)” instead of “Confirm” registers the newly added phone number as a speed dial.

### Changing the registered name in the phone book

**STEP 1** Select “Change Name” using a voice command or.

► Pattern A

**STEP 2** Select the name to be changed by either of the following methods, and select “Confirm” using a voice command or:

a. Press the talk switch and say the desired name.

b. Press the talk switch and say “List Names”. When the desired name is read aloud, press the talk switch.

► Pattern B

**STEP 2** Select the desired name to be changed using .
3-4. Using the hands-free phone system (for mobile phones)

**STEP 3** Press the talk switch or select “Record Name” using and say the new name.

**STEP 4** Select “Confirm” using a voice command or .

### Listing the registered data

Select “List Names” using a voice command or . The list of the registered data will be read aloud. When listing is complete, the system returns to the “Phonebook”.

Pressing the talk switch while the desired data is being read aloud selects the data, and the following function will become available:

- Dialing: “Dial”
- Changing a registered name: “Change Name”
- Deleting an entry: “Delete Entry”
- Setting a speed dial: “Set Speed Dial (Speed Dial)”
3-4. Using the hands-free phone system (for mobile phones)

## Setting speed dials

**STEP 1** Select “Set Speed Dial (Speed Dial)” using a voice command or .

- **Pattern A**

**STEP 2** Select the data to be registered as a speed dial by either of the following methods and select “Confirm” using a voice command or :

   a. Press the talk switch and say the desired name.
   b. Press the talk switch and say “List Names”. When the desired name is read aloud, press the talk switch.

- **Pattern B**

**STEP 2** Select the desired data using .

**STEP 3** Select the desired preset button and register the data into speed dial by either of the following methods:

   a. Press the desired preset button and select “Confirm” by using a voice command or .
   b. Press and hold the desired preset button.
Deleting the registered data

**STEP 1** Select “Delete Entry” using a voice command or .

► Pattern A

**STEP 2** Select the data to be deleted by either of the following methods and select “Confirm” using a voice command or :

a. Press the talk switch and say the name of the desired phone number.

b. Press the talk switch and say “List Names”. When the name of the desired phone number is read aloud, press the talk switch.

► Pattern B

**STEP 2** Select the desired data to be deleted using .

Deleting speed dials

**STEP 1** Select “Delete Speed Dial (Del Spd Dial)” using a voice command or .

**STEP 2** Press the preset button to which the desired speed dial is registered and select “Confirm” using a voice command or .

■ Limitation of number of digits

A phone number that exceeds 24 digits cannot be registered.
3-5. Using the interior lights

Interior lights list

1. Front personal lights (→ P. 446)
2. Front interior light (→ P. 446)
3. Shift lever light (when the “POWER” switch is in ACCESSORY or ON mode)
4. Rear personal lights (→ P. 446)
5. Rear interior light
6. Door courtesy lights
7. Scuff lights (if equipped)
8. Footwell lights
9. Outer foot lights
3-5. Using the interior lights

**Interior lights**

1. Turns the lights on/off linked to door positions.
2. Turns the lights on/off

**Personal lights**

- **Front**

  Turns the light on/off
Rear

Turns the light on/off

- **Illuminated entry system**
  The lights automatically turn on/off according to “POWER” switch mode, the presence of the electronic key, whether the doors are locked/unlocked, and whether the doors are open/closed.

- **To prevent 12-volt battery discharge**
  If the interior lights remain on when the door is not fully closed and the interior light switch (door position on/off) is on, the lights will go off automatically after 20 minutes.

- **Customization**
  Settings (e.g. the time elapsed before the lights turn off) can be changed.
  (Customizable features → P. 693)
List of storage features

CAUTION

Items that should not be left in the storage spaces

Do not leave glasses, lighters or spray cans in the storage spaces, as this may cause the following when cabin temperature becomes high:

- Glasses may be deformed by heat or cracked if they come into contact with other stored items.
- Lighters or spray cans may explode. If they come into contact with other stored items, the lighter may catch fire or the spray can may release gas, causing a fire hazard.

1 Glove box
2 Auxiliary boxes (if equipped)
3 Bottle holders/door pockets
4 Cup holders
5 Console box
6 Under tray
Glove box

The glove box can be opened by pressing the lock release button and locked and unlocked using the mechanical key.

1 Opens
2 Locks
3 Unlocks

■ Power back door main switch (if equipped)

The power back door main switch is located in the glove box. (→P. 72)

⚠️ CAUTION

■ Caution while driving

Keep the glove box closed.
Injuries may result in the event of an accident or sudden braking.
Bottle holders/door pockets

Front

The front door pockets can be opened and closed.

Rear

CAUTION

■ Caution while driving (front door pockets)
  Keep the door pockets closed.
  Injuries may result in the event of an accident or sudden braking.

■ Items unsuitable for the bottle holders
  Do not place anything other than bottles in the bottle holders.
  Other items may be thrown out of the holders in the event of an accident or sudden braking and cause injury.
3-6. Using the storage features
Bottle holders/door pockets and cup holders

⚠️ NOTICE

■ When stowing a bottle
Put the cap on before stowing the bottle. Do not place open bottles in the bottle holders. The contents may spill.

Cup holders

► Front (type A)
Press down and release the right side of the cup holder lid.

► Front (type B)
Press in and release the cup holder.
3-6. Using the storage features

Cup holders

► Rear

Press down the button on the arm-rest.

■ Cup holder insert

The cup holder insert may be removed for cleaning.

⚠ CAUTION

■ Items unsuitable for the cup holder

Do not place anything other than cups or beverage cans in the cup holders. Even when the lid is closed, items must not be stored in the cup holders. Other items may be thrown out of the holders in the event of an accident or sudden braking and cause injury. If possible, cover hot drinks to prevent burns.

■ To prevent burns

Put a lid on containers with hot liquids inside.

■ When not in use

Keep the cup holders closed. Injuries may result in the event of an accident or sudden braking.
3-6. Using the storage features

Console box

Slide the armrest while pulling up the lever, and lift the armrest.

Trays in the console box

- Upper tray/upper trays
  The tray slides forward/backward and can be removed.

- Lower tray
  The tray can be removed.
3-6. Using the storage features

**Console box**

Sun visors

1. To set the visor in the forward position, flip it down.
2. To set the visor in the side position, flip down, unhook, and swing it to the side.
3. To use the side extender, place the visor in the side position, then slide it backward.
Slide the cover to open.
The light turns on when the cover is opened.

⚠️ NOTICE

- **When not in use**
  Keep the vanity mirror closed.

- **To prevent 12-volt battery discharge**
  Do not leave the vanity lights on for extended periods while the hybrid system is off.
The clock is displayed when the “POWER” switch is in ACCESSORY or ON mode. Perform the following steps to adjust the clock.

- Without a navigation system
  1. Adjusts the hours
  2. Adjusts the minutes

- With a navigation system
  Refer to “Navigation System Owner’s Manual”.

- When the 12-volt battery is disconnected
  The time display will automatically be set to 1:00.
The temperature display shows temperatures within the range of -40°F (-40°C) and 122°F (50°C).

Without a navigation system

The temperature display shows temperatures within the range of -40°F (-40°C) and 122°F (50°C).

With a navigation system

Refer to “Navigation System Owner’s Manual”.

If the temperature does not appear

The system may be malfunctioning. Take your vehicle to your Lexus dealer.

Display

In the following situations, the correct outside temperature may not be displayed, or the display may take longer than normal to change:

- When the vehicle is stopped, or moving at low speeds (less than 16 mph [25 km/h])
- When the outside temperature has changed suddenly (at the entrance/exit of a garage, tunnel, etc.)
The brightness of the multi-display can be adjusted to four levels. Press and release the “DISP” switch until the brightness of the display is adjusted to the desired level.

Instrument panel linked brightness control

When the headlight switch is turned on, the brightness of the multi-display will be reduced in accordance with the brightness of the instrument panel. (→P. 195)
The power outlets can be used for the following components.

12 V: Accessories that run on less than 10 A.
120 VAC: Accessories that use less than 100 W.

► Inside the console (12 V)

Slide the armrest while pulling up the lever, and lift the armrest. Remove the upper tray.

Remove the lower tray.

► Under tray (12V)
Luggage compartment (12V)

When the cover is slid open, accessory device cables can be pulled through the opening.

On the back surface of the console (120 VAC*)

*: If equipped
The power outlets can be used when

► 12 V
  The “POWER” switch is in ACCESSORY or ON mode.

► 120 VAC
  The “POWER” switch is in ON mode.

⚠️ NOTICE

■ To avoid damaging the power outlets
  Close the power outlet lid when the power outlet is not in use.
  Foreign objects or liquids that enter the power outlet may cause a short circuit.

■ To prevent the fuse from being blown
  Close the power outlet lid when the power outlet is not in use.
  Foreign objects or liquids that enter the power outlet may cause a short circuit.
  12 V: Do not use an accessory that uses more than 12 V 10 A.
  120 VAC: Do not use a 120 VAC appliance that requires more than 100 W.
  If a 120 VAC appliance that consumes more than 100 W is used, the protection circuit will cut the power supply.

■ To prevent 12-volt battery discharge
  Do not use the power outlets longer than necessary when the hybrid system is off.

■ Appliances that may not operate properly (120 VAC)
  The following 120 VAC appliances may not operate properly even if their power consumption is under 100 W:
  ● Appliances with high initial peak wattage
  ● Measuring devices that process precise data
  ● Other appliances that require an extremely stable power supply
The seat heaters and ventilators heat the seats and maintain good airflow by blowing air from the seats.

**Seat heaters**

1. Turns the seat heater on
   The indicator light comes on. The higher the number is, the warmer the seat becomes.

**Seat heaters/ventilators**

1. Turns the seat heater on
   The indicator light comes on. The higher the number is, the warmer the seat becomes.
2. Blows air from the seat
   The indicator light comes on. The higher the number is, the stronger the airflow becomes.

**Operating condition**

The “POWER” switch is in ON mode.

**When not in use**

Set the knob at “0”. The indicator light turns off.

*: If equipped
CAUTION

Burns

Use caution when seating the following persons in a seat with the seat heater on to avoid the possibility of burns:

- Babies, small children, the elderly, the sick and the physically challenged
- Persons with sensitive skin
- Persons who are fatigued
- Persons who have taken alcohol or drugs that induce sleep (sleeping drugs, cold remedies, etc.)

Do not cover the seat with anything when using the seat heater. Using the seat heater with a blanket or cushion increases the temperature of the seat and may lead to overheating.

NOTICE

To prevent damage to the seat heaters/ventilators

Do not put heavy objects that have an uneven surface on the seat and do not stick sharp objects (needles, nails, etc.) into the seat.

To prevent 12-volt battery discharge

Do not leave the system on longer than necessary when the hybrid system is off.
3-7. Other interior features

Armrest

Pull the armrest down for use.

⚠️ NOTICE

- **To prevent damage to the armrest**
  
  Do not place too much strain on the armrest.
To use the coat hook, push it in.

CAUTION

Items that must not be hung on the hook

Do not hang a coat hanger or other hard or sharp object on the hook. If the SRS curtain shield airbags deploy, these items may become projectiles that cause death or serious injury.
Use only floor mats designed specifically for vehicles of the same model and model year as your vehicle. Fix them securely in place onto the carpet.

Fix the floor mat in place using the retaining hooks (clips) provided.

The shape of the retaining hooks (clips) and the fixing procedure of the floor mat for your vehicle may differ from those shown in the illustration. For details, refer to the floor mat retention clip installation instructions supplied with the clips.

**CAUTION**

Observe the following precautions. Failure to do so may cause the driver’s floor mat to slip, possibly interfering with the pedals while driving. An unexpectedly high speed may result or it may become difficult to stop the vehicle, leading to a serious accident.

**When installing the driver’s floor mat**

- Do not use floor mats designed for other models or different model year vehicles, even if they are Lexus Genuine floor mats.
- Only use floor mats designed for the driver’s seat.
- Always install the floor mat securely using the retaining hooks (clips) provided.
- Do not use two or more floor mats on top of each other.
- Do not place the floor mat bottom-side up or upside-down.

**Before driving**

- Check that the floor mat is securely fixed in the correct place with all the provided retaining hooks (clips). Be especially careful to perform this check after cleaning the floor.
- With the hybrid system stopped and the shift lever in P, fully depress each pedal to the floor to make sure it does not interfere with the floor mat.
3-7. Other interior features

Luggage compartment features

■ Cargo hooks

Pull the hook to use.

The cargo hooks are provided for securing loose items.

■ Auxiliary boxes

Pull the strap upwards when lifting the cover up.
#### Luggage cover

**STEP 1**
Attach the hooks to the hook brackets on the rear seat seat-back.

**STEP 2**
Pull out the luggage cover and hook it onto the anchors.

#### Removing the luggage covers

- **Front luggage cover**
  
  Press the buttons to remove the luggage cover.
3-7. Other interior features

▶ Rear luggage cover

**STEP 1**
Detach the outer clips of the rear luggage cover from the back door.

**STEP 2**
Detach the inner clips of the rear luggage cover from the back door.

■ Installing the rear luggage cover

- Ensure that the luggage cover is in the proper installation position. Push the clips of the rear luggage cover into the indentions on the back door until they are locked into place.
- Check that the rear luggage cover is securely attached.
CAUTION

When the cargo hooks are not in use
To avoid injury, always return the cargo hooks to their stowed positions.
The garage door opener can be programmed to operate garage doors, gates, entry doors, door locks, home lighting systems, security systems, and other devices.

The garage door opener (HomeLink® Universal Transceiver) is manufactured under license from HomeLink®.

**Programming the HomeLink® (for U.S.A. owners)**

The HomeLink® compatible transceiver in your vehicle has 3 buttons which can be programmed to operate 3 different devices. Refer to the programming method below appropriate for the device.

**STEP 1**

Point the remote control transmitter for the device 1 to 3 in. (25 to 75 mm) from the HomeLink® control buttons.

Keep the HomeLink® indicator light in view while programming.
Press and hold one of the HomeLink® buttons and the transmitter button. When the HomeLink® indicator light changes from a slow to a rapid flash, you can release both buttons.

If the HomeLink® indicator light comes on but does not flash, or flashes rapidly for 2 seconds and remains lit, the HomeLink® button is already programmed. Use the other buttons or follow the “Reprogramming a HomeLink® button” instructions. (→P. 477)

Test the HomeLink® operation by pressing the newly programmed button.

If a HomeLink® button has been programmed for a garage door, check to see if the garage door opens and closes. If the garage door does not operate, see if your remote control transmitter is of the rolling code type. Press and hold the programmed HomeLink® button. The remote control transmitter is of the rolling code type if the HomeLink® indicator light flashes rapidly for 2 seconds and then remains lit. If your transmitter is of the rolling code type, proceed to the heading “Programming a rolling code system”.

Repeat the steps above to program another device for each of the remaining HomeLink® buttons.
Programming a Rolling Code system (for U.S.A. owners)

If your device is Rolling Code equipped, follow the steps under the heading “Programming the HomeLink®” before proceeding with the steps listed below.

**STEP 1** Locate the learn button on the ceiling mounted garage door opener motor. The exact location and color of the button may vary by brand of garage door opener motor. Refer to the operation manual supplied with the garage door opener for the location of the learn button.

**STEP 2** Press the learn button.

Following this step, you have 30 seconds in which to initiate step 3 below.

**STEP 3** Press and hold the vehicle’s programmed HomeLink® button for 2 seconds and release it. Repeat this step once again. The garage door may open.

If the garage door opens, the programming process is complete. If the door does not open, press and release the button a third time. This third press and release will complete the programming process by opening the garage door.

The ceiling mounted garage door opener motor should now recognize the HomeLink® signal and operate the garage door.

**STEP 4** Repeat the steps above to program another rolling code system for any of the remaining HomeLink® buttons.

Programming an entry gate (for U.S.A. owners)/Programming all devices in the Canadian market

**STEP 1** Place your transmitter 1 to 3 in. (25 to 75 mm) away from the surface of the HomeLink®.

Keep the HomeLink® indicator light in view while programming.

**STEP 2** Press and hold the selected HomeLink® button.

**STEP 3** Repeatedly press and release (cycle) the device’s remote control button for two seconds each until step 4 is completed.

**STEP 4** When the indicator light on the HomeLink® compatible transceiver starts to flash rapidly, release the buttons.
STEP 5 Test the operation of the HomeLink® by pressing the newly programmed button. Check to see if the gate/device operates correctly.

STEP 6 Repeat the steps above to program another device for each of the remaining HomeLink® buttons.

■ Programming other devices
To program other devices such as home security systems, home door locks or lighting, contact your authorized Lexus dealer for assistance.

■ Reprogramming a button
The individual HomeLink® buttons cannot be erased but can be reprogrammed. To reprogram a button, follow the “Reprogramming a HomeLink® button” instructions.

Operating HomeLink®

Press the appropriate HomeLink® button. The HomeLink® indicator light should turn on.

The HomeLink® compatible transceiver in your vehicle continues to send a signal for up to 20 seconds as long as the button is pressed.

Reprogramming a HomeLink® button

Press and hold the desired HomeLink® button. After 20 seconds, the HomeLink® indicator light will start flashing slowly. Next, while still pressing and holding the HomeLink® button, press and hold the button on the transmitter until the HomeLink® indicator light changes from a slow to a rapid flash.
**Erasing the entire HomeLink® memory (all three programs)**

Press and hold the 2 outside buttons for 10 seconds until the indicator light flashes.

If you sell your vehicle, be sure to erase the programs stored in the HomeLink® memory.

---

**Before programming**

- Install a new battery in the remote control transmitter.
- The battery side of the remote control transmitter must be pointed away from the HomeLink® button.

**Certification for the garage door opener**

- For vehicles sold in the U.S.A.
  
  FCC ID: CB2070NHL4
  
  **NOTE:**
  This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

  **FCC WARNING:**
  Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

- For vehicles sold in Canada
  
  **NOTE:**
  Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

**When support is necessary**

Visit on the web at www.homelink.com or call 1-800-355-3515.
CAUTION

■ When programming a garage door or other remote control device
  The garage door or other device may operate, so ensure people and objects are out of danger to prevent potential harm.

■ Conforming to federal safety standards
  Do not use the HomeLink® compatible transceiver with any garage door opener or device that lacks safety stop and reverse features as required by federal safety standards.
  This includes any garage door that cannot detect an obstruction object. A door or device without these features increases the risk of death or serious injury.
The compass on the inside rear view mirror indicates the direction in which the vehicle is heading.

**Operation**

To turn the compass on or off, press “AUTO” for more than 3 seconds.

**Displays and directions**

<table>

</table>
Calibrating the compass

The direction display deviates from the true direction determined by the earth’s magnetic field. The amount of deviation varies depending on the geographic position of the vehicle.

If you cross over one of the map boundaries shown in illustration, the compass will deviate.
To obtain higher precision or perfect calibration, refer to “Deviation calibration”.

■ Deviation calibration

**STEP 1** Stop the vehicle.

**STEP 2** Press and hold “AUTO”. A number (1 to 15) appears on the compass display.
STEP 3 Referring to the map above, press “AUTO” to select the number of the zone you are in.

If the direction is displayed for several seconds after adjustment, the calibration is complete.

■ Circling calibration

If “C” appears on the display, drive the vehicle at 5 mph (8 km/h) or less in a circle until a direction is displayed.

If there is not enough space to drive in a circle, drive around the block until a direction is displayed.

■ Conditions unfavorable to correct operation

The compass may not show the correct direction in the following conditions:

● The vehicle is stopped immediately after turning.
● The vehicle is on an inclined surface.
● The vehicle is in a place where the earth’s magnetic field is subject to interference by artificial magnetic fields (underground car park/parking lot, under a steel tower, between buildings, roof car park/parking lot, near an intersection, near a large vehicle, etc.).
● The vehicle has become magnetized. (There is a magnet or metal object near the inside rear view mirror.)
● The 12-volt battery has been disconnected.
● A door is open.
### CAUTION

- **While driving the vehicle**
  
  Do not adjust the display. Adjust the display only when the vehicle is stopped.

- **When doing the circling calibration**
  
  Secure a wide space, and watch out for people and vehicles in the vicinity. Do not violate any local traffic rules while performing circling calibration.

### NOTICE

- **To avoid the compass malfunctions**
  
  Do not place magnets or any metal objects near the inside rear view mirror. Doing this may cause the compass sensor to malfunction.

- **To ensure normal operation of the compass**
  
  - Do not perform a circling calibration of the compass in a place where the earth’s magnetic field is subject to interference by artificial magnetic fields.
  
  - During calibration, do not operate electric systems (moon roof, power windows, etc.) as they may interfere with the calibration.
Safety Connect is a subscription-based telematics service that uses Global Positioning System (GPS) data and embedded cellular technology to provide safety and security features to subscribers. Safety Connect is supported by Lexus’ designated response center, which operates 24 hours per day, 7 days per week.

Safety Connect service is available by subscription on select, telematics hardware-equipped vehicles.

By using the Safety Connect service, you are agreeing to be bound by the Telematics Subscription Service Agreement and its Terms and Conditions, as in effect and amended from time to time, a current copy of which is available at Lexus.com. All use of the Safety Connect service is subject to such then-applicable Terms and Conditions.

**System components**

1. Microphone
2. LED light indicators
3. “SOS” button
■ Services
Subscribers have the following Safety Connect services available:

- **Automatic Collision Notification***
  Helps drivers receive necessary response from emergency service providers. (→P. 487)

- **Stolen Vehicle Location**
  Helps drivers in the event of vehicle theft. (→P. 488)

- **Emergency Assistance Button (SOS)**
  Connects drivers to response-center support. (→P. 488)

- **Enhanced Roadside Assistance**
  Provides drivers various on-road assistance. (→P. 488)

■ Subscription
After you have signed the Telematics Subscription Service Agreement and are enrolled, you can begin receiving services.

A variety of subscription terms is available for purchase. Contact your Lexus dealer, call 1-800-25-LEXUS (1-800-255-3987) or push the “SOS” button in your vehicle for further subscription details.
### Safety Connect Services Information

- Phone calls using the vehicle’s Bluetooth® technology will not be possible during Safety Connect.
- Safety Connect is available beginning Fall 2009 on select Lexus models. Contact with the Safety Connect response center is dependent upon the telematics device being in operative condition, cellular connection availability, and GPS satellite signal reception, which can limit the ability to reach the response center or receive emergency service support. Enrollment and Telematics Subscription Service Agreement required. A variety of subscription terms is available; charges vary by subscription term selected.
- Automatic Collision Notification, Emergency Assistance, and Stolen Vehicle Location will function in the United States, including Hawaii and Alaska, and in Canada, and Enhanced Roadside Assistance will function in the United States (except Hawaii) and in Canada. No Safety Connect services will function outside of the United States in countries other than Canada.
- Safety Connect services are not subject to section 255 of the Telecommunications Act and the device is not TTY compatible.

### Languages

The Safety Connect response center will offer support in multiple languages. The Safety Connect system will offer voice prompts in English and Spanish. Please indicate your language of choice when enrolling.

### When contacting the response center

You may be unable to contact the response center if the network is busy.
Safety Connect LED light Indicators

When the “POWER” switch is turned to ON mode, the red indicator light comes on for 2 seconds then turns off. Afterward, the green indicator light comes on, indicating that the service is active. The following indicator light patterns indicate specific system usage conditions:

- Green indicator light on = Active service
- Green indicator light flashing = Safety Connect call in process
- Red indicator light (except at vehicle start-up) = System malfunction (contact your Lexus dealer)
- No indicator light (off) = Safety Connect service not active

Safety Connect services

Automatic Collision Notification

In case of either airbag deployment or severe rear-end collision, the system is designed to automatically call the response center. The responding agent receives the vehicle’s location and attempts to speak with the vehicle occupants to assess the level of emergency. If the occupants are unable to communicate, the agent automatically treats the call as an emergency, contacts the nearest emergency services provider to describe the situation, and requests that assistance be sent to the location.
■ Stolen Vehicle Location
If your vehicle is stolen, Safety Connect can work with local authorities to assist them in locating and recovering the vehicle. After filing a police report, call the Safety Connect response center at 1-800-25-LEXUS (1-800-255-3987) and follow the prompts for Safety Connect to initiate this service.

In addition to assisting law enforcement with recovery of a stolen vehicle, Safety-Connect-equipped vehicle location data may, under certain circumstances, be shared with third parties to locate your vehicle. Further information is available at Lexus.com.

■ Emergency Assistance Button (“SOS”)
In the event of an emergency on the road, push the “SOS” button to reach the Safety Connect response center. The answering agent will determine your vehicle’s location, assess the emergency, and dispatch the necessary assistance required.

If you accidentally press the “SOS” button, tell the response-center agent that you are not experiencing an emergency.

■ Enhanced Roadside Assistance
Enhanced Roadside Assistance adds GPS data to the already included warranty-based Lexus roadside service. Subscribers can press the “SOS” button to reach a Safety Connect response-center agent, who can help with a wide range of needs, such as: towing, flat tire, fuel delivery, etc. For a description of the Enhanced Roadside Assistance services and their limitations, please see the Safety Connect Terms and Conditions, which are available at Lexus.com.
Safety information for Safety Connect

Important! Read this information before using Safety Connect.

Exposure to radio frequency signals

The Safety Connect system installed in your vehicle is a low-power radio transmitter and receiver. It receives and also sends out radio frequency (RF) signals.

In August 1996, the Federal Communications Commission (FCC) adopted RF exposure guidelines with safety levels for mobile wireless phones. Those guidelines are consistent with the safety standards previously set by the following U.S. and international standards bodies.

- ICNIRP (International Commission on Non-Ionizing Radiation Protection) [1996]

Those standards were based on comprehensive and periodic evaluations of the relevant scientific literature. Over 120 scientists, engineers, and physicians from universities, and government health agencies and industries reviewed the available body of research to develop the ANSI Standard (C95.1).

The design of Safety Connect complies with the FCC guidelines in addition to those standards.

Perform the following to protect the vehicle and maintain it in prime condition:

- Working from top to bottom, liberally apply water to the vehicle body, wheel wells and underside of the vehicle to remove any dirt and dust.
- Wash the vehicle body using a sponge or soft cloth, such as a chamois.
- For hard-to-remove marks, use car wash soap and rinse thoroughly with water.
- Wipe away any water.
- Wax the vehicle when the waterproof coating deteriorates.

If water does not bead on a clean surface, apply wax when the vehicle body is cool.

### Automatic car washes

- Before washing the vehicle:
  - Fold the mirrors.
  - Turn off the power back door system (if equipped).
- Brushes used in automatic car washes may scratch the vehicle surface and harm your vehicle’s paint.

### High pressure car washes

- Do not allow the nozzles of the car wash to come within close proximity of the windows and the air suspension unit (if equipped).
- Before using the car wash, check that the fuel filler door on your vehicle is closed properly.
### Aluminum wheels
- Remove any dirt immediately by using a neutral detergent. Do not use hard brushes or abrasive cleaners. Do not use strong or harsh chemical cleaners. Use the same mild detergent and wax as used on the paint.
- Do not use detergent on the wheels when they are hot, for example after driving for long distance in the hot weather.
- Wash detergent from the wheels immediately after use.

### Bumpers
Do not scrub with abrasive cleaners.

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>When cleaning the windshield (vehicles with rain-sensing windshield wiper)</strong></td>
</tr>
</tbody>
</table>

Set the wiper switch to off. If the wiper switch is in AUTO, the wipers may operate unexpectedly in the following situations, and may result in hands being caught or other serious injuries and cause damage to the wiper blades.

- When the upper part of the windshield where the raindrop sensor is located is touched by hand
- When a wet rag or similar is held close to the raindrop sensor
- If something bumps against the windshield
- If you directly touch the raindrop sensor body or if something bumps into the raindrop sensor

<table>
<thead>
<tr>
<th>Precautions regarding the exhaust pipe</th>
</tr>
</thead>
</table>

Exhaust gasses cause the exhaust pipe to become quite hot. When washing the vehicle, be careful not to touch the pipe until it has cooled sufficiently, as touching a hot exhaust pipe can cause burns.
4-1. Maintenance and care

**NOTICE**

- **To prevent paint deterioration and corrosion on the body and components (aluminum wheels etc.)**
  - Wash the vehicle immediately in the following cases:
    - After driving near the sea coast
    - After driving on salted roads
    - If you see coal tar or tree sap on the paint surface
    - If you see dead insects, insect droppings or bird droppings on the paint
    - After driving in an area contaminated with soot, oily smoke, mine dust, iron powder or chemical substances
    - If the vehicle becomes heavily soiled in dust or mud
    - If liquids such as benzene and gasoline are spilled on the paint surface
  - If the paint is chipped or scratched, have it repaired immediately.
  - To prevent the wheels from corroding, remove any dirt and store in a place with low humidity when storing the wheels.

- **Cleaning the exterior lights**
  - Wash carefully. Do not use organic substances or scrub with a hard brush. This may damage the surfaces of the lights.
  - Do not apply wax on the surfaces of the lights. Wax may cause damage to the lenses.

- **To prevent damage to the windshield wiper arms**
  - When lifting the wiper arms away from the windshield, pull the driver side wiper arm upward first, and repeat for the passenger side. When returning the wipers to their original position, do so from the passenger side first.

- **When using an automatic car wash (vehicles with rain-sensing windshield wipers)**
  - Set the wiper switch to the off position.
  - If the wiper switch is in [AUTO], the wipers may operate and the wiper blades may be damaged.
The following procedures will help protect your vehicle’s interior and keep it in top condition:

- **Protecting the vehicle interior**
  Remove dirt and dust using a vacuum cleaner. Wipe dirty surfaces with a cloth dampened with lukewarm water.

- **Cleaning the leather areas**
  - Remove dirt and dust using a vacuum cleaner.
  - Wipe any excess dirt and dust with a soft cloth dampened with diluted detergent.
    Use a diluted water solution of approximately 5% neutral wool detergent.
  - Wring out any excess water from the cloth and thoroughly wipe off all remaining traces of detergent.
  - Wipe the surface with a dry, soft cloth to remove any remaining moisture. Allow the leather to dry in a shaded and ventilated area.

- **Cleaning the synthetic leather areas**
  - Remove loose dirt using a vacuum cleaner.
  - Apply a mild soap solution to the synthetic leather using a sponge or soft cloth.
  - Allow the solution to soak in for a few minutes. Remove the dirt and wipe off the solution with a clean, damp cloth.
Caring for leather areas
Lexus recommends cleaning the interior of the vehicle at least twice a year to maintain the quality of the vehicle’s interior.

Shampooing the carpets
There are several commercial foaming-type cleaners available. Use a sponge or brush to apply the foam. Rub in overlapping circles. Do not apply water. Excellent results are obtained by keeping the carpet as dry as possible.

Seat belts
Clean with mild soap and lukewarm water using a cloth or sponge. Also check the belts periodically for excessive wear, fraying or cuts.

CAUTION

Water in the vehicle
- Do not splash or spill liquid in the vehicle, such as on the floor and in the hybrid battery (traction battery) air vents or in the luggage compartment. Doing so may cause the hybrid battery, electrical components, etc. to malfunction or catch fire.
- Do not get any of the SRS components or wiring in the vehicle interior wet. (→P.134) An electrical malfunction may cause the airbags to deploy or not function properly, resulting in death or severe injury.

Cleaning the interior (especially instrument panel)
Do not use polish wax or polish cleaner. The instrument panel may reflect off the windshield, obstructing the driver’s view and leading to an accident, resulting in death or serious injury.
## NOTICE

### Cleaning detergents

- Do not use the following types of detergent, as they may discolor the vehicle interior or cause streaks or damage to painted surfaces:
  - Non-seat portions: Organic substances such as benzene or gasoline, alkaline or acidic solutions, dye, or bleach
  - Seats: Acidic solutions, such as thinner, benzene, or alcohol
- Do not use polish wax or polish cleaner. The instrument panel's or other interior part's painted surface may be damaged.

### Preventing damage to leather surfaces

Observe the following precautions to avoid damage to and deterioration of leather surfaces:

- Remove any dust or dirt on leather surfaces immediately.
- Do not expose the vehicle to direct sunlight for extended periods of time. Park the vehicle in the shade, especially during summer.
- Do not place items made of vinyl, plastic, or that contain wax on the upholstery, as they may stick to the leather surface if the vehicle interior heats up significantly.

### Water on the floor

Do not wash the vehicle floor with water. Vehicle systems such as the audio system may be damaged if water comes into contact with electrical components under the floor of vehicle. Water may also cause the body to rust.

### Cleaning the inside of the rear window

- Do not use glass cleaner to clean the rear window, as this may cause damage to the rear window defogger heater wires or antenna. Use a cloth dampened with lukewarm water to gently wipe the window clean. Wipe the window in strokes running parallel to the heater wires or antenna.
- Be careful not to scratch or damage the heater wires or antenna.
To ensure safe and economical driving, day-to-day care and regular maintenance are essential. It is the owner’s responsibility to perform regular checks. Lexus recommends performing the following maintenance:

- **General maintenance**
  General maintenance should be performed on a daily basis. This can be done by yourself or by a Lexus dealer.

- **Scheduled maintenance**
  Scheduled maintenance should be performed at specified intervals according to the maintenance schedule.

  For details about maintenance items and schedules, refer to the “Warranty and Service Guide”, “Owner’s Manual Supplement” or “Scheduled Maintenance”.

- **Do-it-yourself maintenance**
  You can perform some maintenance procedures yourself. Please be aware that do-it-yourself maintenance may affect warranty coverage.

  The use of Lexus Repair Manuals is recommended.

- **Repair and replacement**
  It is recommended that genuine Lexus parts be used for repair to ensure performance of each system. If non-Lexus parts are used in replacement or if a repair shop other than a Lexus dealer performs repairs, confirm the warranty coverage.
 ■ Reset the maintenance data (U.S.A. only)

After the required maintenance is performed according to the maintenance schedule, please reset the maintenance data.
To reset the data, follow the procedures described below:

**STEP 1** Display the trip meter “A” (→P.195), then turn the “POWER” switch off.

**STEP 2** While pressing the “ODO/TRIP” button, turn the “POWER” switch to ON mode.

Keep the “ODO/TRIP” button pressed for about 5 seconds. The resetting procedure is complete when “000000” in the trip meter flashes once and the message in the multi-information display disappears.

■ Allow inspection and repairs to be performed by a Lexus dealer

- Lexus technicians are well-trained specialists and are kept up to date with the latest service information. They are well informed about the operations of all systems on your vehicle.

- Keep a copy of the repair order. It proves that the maintenance that has been performed is under warranty coverage. If any problem should arise while your vehicle is under warranty, your Lexus dealer will promptly take care of it.
CAUTION

- **If your vehicle is not properly maintained**

  Improper maintenance could result in serious damage to the vehicle and possible serious injury or death.

- **Handling of the 12-volt battery**

  - Engine exhaust, some of its constituents, and a wide variety of automobile components contain or emit chemicals known to the State of California to cause cancer and birth defects and other reproductive harm. Work in a well ventilated area.

  - Oils, fuels and fluids contained in vehicles as well as waste produced by component wear contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. Avoid exposure and wash any affected area immediately.

  - 12-volt battery posts, terminals and related accessories contain lead and lead compounds which are known to cause brain damage. Wash your hands after handling. (→P. 525)
Listed below are the general maintenance items that should be performed at the intervals specified in the “Warranty and Service Guide” or “Owner’s Manual Supplement”. It is recommended that any problem you notice should be brought to the attention of your Lexus dealer or qualified service shop for advice.

⚠️ **CAUTION**

**If the hybrid system is operating**

Turn the hybrid system off and ensure that there is adequate ventilation before performing maintenance checks.
Emission inspection and maintenance (I/M) programs

Some states have vehicle emission inspection programs which include OBD (On Board Diagnostics) checks. The OBD system monitors the operation of the emission control system.

- **If the malfunction indicator lamp comes on**
  The OBD system determines that a problem exists somewhere in the emission control system. Your vehicle may not pass the I/M test and may need to be repaired. Contact your Lexus dealer to service the vehicle.

- **Your vehicle may not pass the I/M test in the following situations:**
  - When the 12-volt battery is disconnected or discharged
    Readiness codes that are set during ordinary driving are erased. Also, depending on your driving habits, the readiness codes may not be completely set.
  - When the fuel tank cap is loose
    The malfunction indicator lamp comes on indicating a temporary malfunction and your vehicle may not pass the I/M test.

- **When the malfunction indicator lamp still remains on after several driving trips**
  The error code in the OBD system will not be cleared unless the vehicle is driven 40 or more times.

- **If your vehicle does not pass the I/M test**
  Contact your Lexus dealer to prepare the vehicle for re-testing.
If you perform maintenance by yourself, be sure to follow the correct procedures as given in these sections.

The engine compartment contains many mechanisms and fluids that may move suddenly, become hot, or become electrically energized. To avoid death or serious injury, observe the following precautions:

**When working on the engine compartment**
- Make sure that the indicator on the “POWER” switch and the “READY” indicator are both off.
- Keep hands, clothing and tools away from the moving fans and engine drive belt.
- Be careful not to touch the engine, power control unit, radiator, exhaust manifold, etc. right after driving as they may be hot. Oil and other fluids may also be hot.
- Do not leave anything that may burn easily, such as paper and rags, in the engine compartment.
- Do not smoke, cause sparks or expose an open flame to fuel. Fuel fumes are flammable.

**When working near the electric cooling fans or radiator grille**
Be sure the “POWER” switch is off.
With the “POWER” switch in ON mode, the electric cooling fans may automatically start to run if the air conditioning is on and/or the coolant temperature is high. (→P. 521)

**Safety glasses**
Wear safety glasses to prevent flying or falling material, fluid spray, etc. from getting in your eyes.

**If you remove the air cleaner filter**
Driving with the air cleaner filter removed may cause excessive engine wear due to dirt in the air. Also, a backfire could cause a fire in the engine compartment.
4-3. Do-it-yourself maintenance

Hood

Release the lock from the inside of the vehicle to open the hood.

**STEP 1**
Pull the hood lock release lever.
The hood will pop up slightly.

**STEP 2**
Pull up the hood catch and lift the hood.

⚠️ CAUTION

*Pre-driving check*
Check that the hood is fully closed and locked.
If the hood is not locked properly, it may open while the vehicle is in motion and cause an accident, which may result in death or serious injury.
When raising your vehicle with a floor jack, position the jack correctly. Improper placement may damage your vehicle or cause injury.

- **Front**

- **Rear**
When raising your vehicle

Make sure to observe the following precautions to reduce the possibility of death or serious injury:

- Lift up the vehicle using a floor jack such as the one shown in the illustration.

- When using a floor jack, follow the instructions of the manual provided with the jack.
- Do not use the jack that was supplied with your vehicle.
- Do not put any part of your body underneath the vehicle when it is supported only by the floor jack.
- Always use floor jack and/or automotive jack stands on a solid, flat, level surface.
- Do not start the hybrid system while the vehicle is supported by the floor jack.
- Stop the vehicle on level, firm ground, firmly set the parking brake and shift the shift lever to P.
- Make sure to set the floor jack properly at the jack point. Raising the vehicle with an improperly positioned floor jack will damage the vehicle and may cause the vehicle to fall off the floor jack.
- Do not raise the vehicle while someone is in the vehicle.
- When raising the vehicle, do not place any objects on top of or underneath the floor jack.
- Vehicles with electronically modulated air suspension (if equipped): Be sure to turn off the height control and stop the hybrid system. Otherwise, the vehicle height may change in the automatic leveling function. (→P. 264)

11. Washer fluid tank  (→P. 523)
Engine compartment cover

- Removing the engine compartment covers
  - Outside

- Front

- Installing the clips
4-3. Do-it-yourself maintenance

⚠️ NOTICE

- **After installing an engine compartment cover**
  Make sure that the cover is securely installed in its original position.
Engine oil

With the engine at operating temperature and turned off, check the oil level on the dipstick.

- **Checking the engine oil**
  
  **STEP 1** Park the vehicle on level ground. After warming up the engine and turning off the hybrid system, wait more than 5 minutes for the oil to drain back into the bottom of the engine.
  
  **STEP 2** Hold a rag under the end and pull the dipstick out.
  
  **STEP 3** Wipe the dipstick clean.
  
  **STEP 4** Reinsert the dipstick fully.
  
  **STEP 5** Holding a rag under the end, pull the dipstick out and check the oil level.
  
  **STEP 6** Wipe the dipstick and reinsert it fully.

1. Low
2. Full
### Adding engine oil

If the oil level is below or near the low level mark, add engine oil of the same type as that already in the engine.

Make sure to check the oil type and prepare the items needed before adding oil.

<table>
<thead>
<tr>
<th>Engine oil selection</th>
<th>→P. 668</th>
</tr>
</thead>
<tbody>
<tr>
<td>Oil quantity (Low → Full)</td>
<td>1.6 qt. (1.5 L, 1.3 Imp. qt.)</td>
</tr>
<tr>
<td>Items</td>
<td>Clean funnel</td>
</tr>
</tbody>
</table>

**STEP 1** Remove the oil filler cap by turning it counterclockwise.

**STEP 2** Add engine oil slowly, checking the dipstick.

**STEP 3** Install the oil filler cap by turning it clockwise.
**Engine oil consumption**

- The amount of engine oil consumed depends on the oil viscosity, the quality of the oil and the way the vehicle is driven.
- More oil is consumed under driving conditions such as high speeds and frequent acceleration and deceleration.
- A new engine consumes more oil.
- When judging the amount of oil consumption, keep in mind that the oil may have become diluted, making it difficult to judge the true level accurately.
- Oil consumption: Max. 1.1 qt./600 miles (0.9 Imp. qt./600 miles, 1.0 L/1000 km)
- If your vehicle consumes more than 1.1 qt. (1.0 L, 0.9 Imp. qt.) every 600 miles (1000 km), contact your Lexus dealer.

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
</table>

**Used engine oil**

- Used engine oil contains potentially harmful contaminants which may cause skin disorders such as inflammation or skin cancer, so care should be taken to avoid prolonged and repeated contact. To remove used engine oil from your skin, wash thoroughly with soap and water.
- Dispose of used oil and filters only in a safe and acceptable manner. Do not dispose of used oil and filters in household trash, in sewers or onto the ground. Call your Lexus dealer, service station or auto parts store for information concerning recycling or disposal.
- Do not leave used engine oil within the reach of children.
## NOTICE

**To prevent serious engine damage**
Check the oil level on a regular basis.

**When replacing the engine oil**

- Be careful not to spill engine oil on the vehicle components.
- Avoid overfilling, or the engine could be damaged.
- Check the oil level on the dipstick every time you refill the vehicle.
- Be sure the engine oil filler cap is properly tightened.
The coolant level is satisfactory if it is between the “FULL” and “LOW” lines on the reservoir when the engine and hybrid system are cold.

**Engine coolant reservoir**

1. Reservoir cap  
2. “FULL” line  
3. “LOW” line  

If the level is on or below the “LOW” line, add coolant up to the “FULL” line. (→ P. 670)
Power control unit coolant reservoir

1. Reservoir cap
2. “FULL” line
3. “LOW” line

If the level is on or below the “LOW” line, add coolant up to the “FULL” line. (→P. 670)

Coolant selection

Only use “Toyota Super Long Life Coolant” or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, and non-borate coolant with long-life hybrid organic acid technology.

U.S.A.: “Toyota Super Long Life Coolant” is a mixture of 50% coolant and 50% deionized water. (Minimum temperature: -31°F [-35°C])

Canada: “Toyota Super Long Life Coolant” is a mixture of 55% coolant and 45% deionized water. (Minimum temperature: -44°F [-42°C])

For more details about coolant, contact your Lexus dealer.

If the coolant level drops within a short time of replenishing

Visually check the radiators, hoses, engine/power control unit coolant reservoir caps, drain cock and water pump.

If you cannot find a leak, have your Lexus dealer test the cap and check for leaks in the cooling systems.
4-3. Do-it-yourself maintenance

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
</table>

■ When the engine and hybrid system are hot

Do not remove the coolant reservoir cap. The cooling system may be under pressure and may spray hot coolant if the cap is removed, causing serious injuries, such as burns.

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
</table>

■ When adding coolant

Coolant is neither plain water nor straight antifreeze. The correct mixture of water and antifreeze must be used to provide proper lubrication, corrosion protection and cooling. Be sure to read the antifreeze or coolant label.

■ If you spill coolant

Be sure to wash it off with water to prevent damaging to parts or paint.

Radiator and condenser

Check the radiator and condenser and clear any foreign objects. If either of the above parts are extremely dirty or you are not sure of their condition, have your vehicle checked by your Lexus dealer.

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
</table>

■ The radiators and condenser may be hot after driving

Do not touch the radiator or condenser as they may be hot and cause serious injuries, such as burns.
Brake fluid

- Checking fluid level
  The brake fluid level should be between the “MAX” and “MIN” lines on the tank.

- Adding fluid
  Make sure to check the fluid type and prepare the necessary item.

<table>
<thead>
<tr>
<th>Fluid type</th>
<th>FMVSS No.116 DOT 3 or SAE J1703</th>
</tr>
</thead>
<tbody>
<tr>
<td>Items</td>
<td>Clean funnel</td>
</tr>
</tbody>
</table>
Brake fluid can absorb moisture from the air

Excess moisture in the brake fluid can cause a dangerous loss of braking efficiency. Use only newly opened brake fluid.

⚠️ CAUTION

When filling the reservoir

Take care because brake fluid can harm your hands or eyes and damage painted surfaces.

If fluid gets on your hands or in your eyes, flush the affected area with clean water immediately.

If you still experience discomfort, see a doctor.

⚠️ NOTICE

If the fluid level is low or high

It is normal for the brake fluid level to go down slightly as the brake pads wear out or when the fluid level in the accumulator is high.

If the reservoir needs frequent refilling, may be a serious problem.

Washer fluid

If any washer does not work or the warning message appears on the multi-information display, the washer tank may be empty. Add washer fluid.
<table>
<thead>
<tr>
<th><strong>CAUTION</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>When adding washer fluid</strong></td>
</tr>
<tr>
<td>Do not add washer fluid when the hybrid system is hot or operating as washer fluid contains alcohol and may catch fire if spilled on the hybrid system etc.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>NOTICE</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Do not use any fluid other than washer fluid</strong></td>
</tr>
<tr>
<td>Do not use soapy water or engine antifreeze instead of washer fluid. Doing so may cause streaking on the vehicle’s painted surfaces.</td>

</tbody>
</table>
12-volt battery

- **Location**
  
  The 12-volt battery is located on the left-hand side of the luggage compartment.

- **Removing the 12-volt battery cover**
  
  **Vehicles with a compact spare tire**
  
  **STEP 1**
  
  Pull the lever upward to fold back the front part of the deck board.

  **STEP 2**
  
  Pull the folded deck board upright.
Pull on the attached hook to extend the string.

Use the hook to secure the deck board as shown in the illustration.

Remove the spare tire cover.

After removing the clips, remove the 12-volt battery cover.
Vehicles with a full-size spare tire

STEP 1
Pull the lever upward to fold back the front part of the deck board.

STEP 2
Pull on the attached hook to extend the string.

STEP 3
Use the hook to secure the deck board as shown in the illustration.
After removing the clips, remove the 12-volt battery cover.

- **Exterior**
  Make sure that the 12-volt battery terminals are not corroded and that there are no loose connections, cracks or loose clamps.

  ![Image of terminals and hold-down clamp](image)

  - **Terminals**
  - **Hold-down clamp**

- **Installing the 12-volt battery cover**
  Install the 12-volt battery cover with the clips.

![Image of battery cover installation](image)
Before recharging

When recharging, the 12-volt battery produces hydrogen gas which is flammable and explosive. Therefore, observe the following precautions before recharging:

● If recharging with the 12-volt battery installed on the vehicle, be sure to disconnect the ground cable.

● Make sure the power switch on the charger is off when connecting and disconnecting the charger cables to the 12-volt battery.

After recharging/reconnecting the 12-volt battery

The hybrid system may not start. Follow one or both of the following procedures:

● After opening and closing the driver’s door, wait 10 seconds and then attempt to start the hybrid system. (If the system does not start the first time, repeat the procedure.)

● With the shift lever in P and the “POWER” switch off, open and close any door and then attempt to start the hybrid system.

If the system will not start even after multiple attempts at both methods, contact your Lexus dealer.
CAUTION

- **Chemicals in the 12-volt battery**
  The 12-volt battery contain poisonous and corrosive sulfuric acid and may produce hydrogen gas which is flammable and explosive. To reduce the risk of death or serious injury, take the following precautions while working on or near the 12-volt battery:
  - Do not cause sparks by touching the 12-volt battery terminals with tools.
  - Do not smoke or light a match near the 12-volt battery.
  - Avoid contact with eyes, skin and clothes.
  - Never inhale or swallow electrolyte.
  - Wear protective safety glasses when working near the 12-volt battery.
  - Keep children away from the 12-volt battery.

- **Where to safely charge the 12-volt battery**
  Always charge the 12-volt battery in an open area. Do not charge the 12-volt battery in a garage or closed room where there is insufficient ventilation.

- **How to recharge the 12-volt battery**
  Only perform a slow charge (5 A or less). The 12-volt battery may explode if charged at a quicker rate.

- **Emergency measures regarding electrolyte**
  - If electrolyte gets in your eyes
    Flush your eyes with clean water for at least 15 minutes and get immediate medical attention. If possible, continue to apply water with a sponge or cloth while traveling to the nearest medical facility.
  - If electrolyte gets on your skin
    Wash the affected area thoroughly. If you feel pain or burning, get medical attention immediately.
  - If electrolyte gets on your clothes
    It can soak through clothing on to your skin. Immediately take off the clothing and follow the procedure above if necessary.
  - If you accidentally swallow electrolyte
    Drink a large quantity of water or milk. Follow with milk of magnesia, beaten raw egg or vegetable oil. Get emergency medical attention immediately.
4-3. Do-it-yourself maintenance

**CAUTION**

- **When replacing the 12-volt battery**
  
  Use a 12-volt battery designed for the RX450h. Failure to do so may cause gas (hydrogen) to enter the passenger compartment, causing a fire or explosion. For replacement of the 12-volt battery, contact your Lexus dealer.

**NOTICE**

- **When recharging the 12-volt battery**
  
  Never recharge the 12-volt battery while the hybrid system is operating. Also, be sure all accessories are turned off.
Replace or rotate tires in accordance with maintenance schedules and treadwear.

■ Checking tires

1. New tread
2. Treadwear indicator
3. Worn tread

The location of treadwear indicators is shown by the “TWI” or “Δ” marks, etc., molded on the sidewall of each tire.

Check spare tire condition and pressure if not rotated.

■ Tire rotation

► Vehicles with a compact spare tire

Rotate the tires in the order shown.

To equalize tire wear and extend tire life, Lexus recommends that tire rotation is carried out at the same interval as tire inspection.

► Vehicles with a full-size spare tire

Rotate the tires in the order shown.

To equalize tire wear and extend tire life, Lexus recommends that tire rotation is carried out at the same interval as tire inspection.
The tire pressure warning system

Your Lexus is equipped with a tire pressure warning system that uses tire pressure warning valves and transmitters to detect low tire inflation pressure before serious problems arise. (→P. 601)

Installing tire pressure warning valves and transmitters

When replacing tires or wheels, tire pressure warning valves and transmitters must also be installed.

When new tire pressure warning valves and transmitters are installed, new tire pressure warning valve and transmitter ID codes must be registered in the tire pressure warning computer and the tire pressure warning system must be initialized. Have tire pressure warning valve and transmitter ID codes registered by your Lexus dealer. (→P. 535)

Initializing the tire pressure warning system

The tire pressure warning system must be initialized in the following circumstances:

- When tire inflation pressure is changed such as when changing travelling speed or load weight
- When changing the tire size

When the tire pressure warning system is initialized, the current tire inflation pressure is set as the benchmark pressure.
How to initialize the tire pressure warning system

**STEP 1** Park the vehicle in a safe place and turn the “POWER” switch off. Initialization cannot be performed while the vehicle is moving.

**STEP 2** Adjust the tire inflation pressure to the specified cold tire inflation pressure level. (→P. 673)

Make sure to adjust the tire pressure to the specified cold tire inflation pressure level. The tire pressure warning system will operate based on this pressure level.

**STEP 3** Turn the “POWER” switch to ON mode.

**STEP 4** Press and hold the tire pressure warning reset switch until the tire pressure warning light blinks slowly 3 times.

**STEP 5** Wait for a few minutes with the “POWER” switch on and then turn the “POWER” switch off.
Registering ID codes

The tire pressure warning valve and transmitter is equipped with a unique ID code. When replacing a tire pressure warning valve and transmitter, it is necessary to register the ID code. Have the ID code registered by your Lexus dealer.

■ When to replace your vehicle’s tires

Tires should be replaced if:

● You have tire damage such as cuts, splits, cracks deep enough to expose the fabric, and bulges indicating internal damage.

● A tire goes flat repeatedly or cannot be properly repaired due to the size or location of a cut or other damage.

If you are not sure, consult with your Lexus dealer.

■ Replacing tires and wheels

If the ID code of the tire pressure warning valve and transmitter is not registered, the tire pressure warning system will not work properly. After driving for about 20 minutes, the tire pressure warning light blinks for 1 minute and stays on to indicate a system malfunction.

■ Tire life

Any tire over 6 years old must be checked by a qualified technician even if it has seldom or never been used or damage is not obvious.

■ If the tread on snow tires wears down below 0.16 in. (4 mm)

The effectiveness of the tires as snow tires is lost.
■ Maximum load of tire

Check that the number given by dividing the maximum load by 1.10 of the replacement tire is greater than 1/2 of the Gross Axle Weight Ratings (GAWR) of either the front axle or the rear axle, whichever is greater.

For the GAWR, see the Certification Label. For the maximum load of the tire, see the load limit at maximum cold tire inflation pressure mentioned on the sidewall of the tire. (→P. 680)

■ Tire types

1 Summer tires

Summer tires are high-speed performance tires best suited to highway driving under dry conditions. Since summer tires do not have the same traction performance as snow tires, summer tires are inadequate for driving on snow-covered or icy roads. For driving on snow-covered roads or icy roads, the use of snow tires is recommended. When installing snow tires, be sure to replace all four tires.

2 All season tires

All season tires are designed to provide better traction in snow and to be adequate for driving in most winter conditions, as well as for use year round. All season tires, however, do not have adequate traction performance compared with snow tires in heavy or loose snow. Also, all season tires fall short in acceleration and handling performance compared with summer tires in highway driving.

3 Snow tires

For driving on snow-covered roads or icy roads, we recommend using snow tires. If you need snow tires, select tires of the same size, construction and load capacity as the originally installed tires. Since your vehicle has radial tires as original equipment, make sure your snow tires also have radial construction. Do not install studded tires without first checking local regulations for possible restrictions. Snow tires should be installed on all wheels. (→P. 296)
**Initializing the tire pressure warning system**

Initialize the tire pressure warning system with the tire inflation pressure adjusted to the specified level.

**If you push the tire pressure warning reset switch accidentally**

If initialization is performed, adjust the tire inflation pressure to the specified level and initialize the tire pressure warning system again.

**When the initialization of the tire pressure warning system has failed**

Initialization can be completed in a few minutes. However, in the following cases, the settings have not been recorded and the system will not operate properly. If repeated attempts to record tire inflation pressure settings are unsuccessful, have the vehicle inspected by your Lexus dealer.

- When operating the tire pressure warning reset button, the tire pressure warning light does not blink 3 times.
- After carrying out the initialization procedure, the tire pressure warning light blinks for 1 minute then stays on after driving for 20 minutes.

**Routine tire inflation pressure checks**

The tire pressure warning system does not replace routine tire inflation pressure checks. Make sure to check tire inflation pressure as part of your routine of daily vehicle checks.
**Tire pressure warning system certification**

TPMS Transmitter  
FCC ID: PAXPMV107J  
IC ID: 3729A-PMV107J

TPMS Receiver  
FCC ID: HYQ13BCX  
IC ID: 1551A-13BCX

For vehicles sold in the U.S.A.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

**FCC WARNING:**
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

For vehicles sold in Canada

Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

L’utilisation de ce dispositif est autorisée seulement aux deux conditions suivantes: (1) il ne doit pas produire de brouillage, et (2) l’utilisateur du dispositif doit être prêt à accepter tout brouillage radioélectrique reçu, même si ce brouillage est susceptible de compromettre le fonctionnement du dispositif.
**CAUTION**

**Tire pressure warning system operation**

The tire pressure warning system may not provide warning immediately if a tire bursts or if sudden air leakage occurs.

**When inspecting or replacing tires**

Observe the following precautions to prevent accidents. Failure to do so may cause damage to parts of the drive train, as well as dangerous handling characteristics, which may lead to an accident resulting in death or serious injury.

- Do not mix tires of different makes, models or tread patterns. Also, do not mix tires of remarkably different treadwear.

- Do not use tire sizes other than those recommended by Lexus.

- Do not mix differently constructed tires (radial, bias-belted or bias-ply tires).

- Do not mix summer, all season and snow tires.

- Do not use tires that have been used on another vehicle.

  - Do not use tires if you do not know how they were used previously.

**When initializing the tire pressure warning system**

Do not push the tire pressure warning reset switch without first adjusting the tire inflation pressure to the specified level. Otherwise, the tire pressure warning light may not come on even if the tire inflation pressure is low, or it may come on when the tire inflation pressure is actually normal.
### NOTICE

**Repairing or replacing tires, wheels, tire pressure warning valves and transmitters and tire valve caps**
- When removing or fitting the wheels, tires or the tire pressure warning valves and transmitter, contact your Lexus dealer as the tire pressure warning valves and transmitters may be damaged if not handled correctly.
- When replacing tire valve caps, do not use tire valve caps other than those specified. The cap may become stuck.

**To avoid damage to the tire pressure warning valves and transmitters**
When a tire is repaired with liquid sealants, the tire pressure warning valve and transmitter may not operate properly. If a liquid sealant is used, contact your Lexus dealer or other qualified service shop as soon as possible. Make sure to replace the tire pressure warning valve and transmitter when replacing the tire. (→P. 533)

**Driving on rough roads**
Take particular care when driving on roads with loose surfaces or potholes. These conditions may cause losses in tire inflation pressure, reducing the cushioning ability of the tires. In addition, driving on rough roads may cause damage to the tires themselves, as well as the vehicle’s wheels and body.

**If tire inflation pressure of each tire becomes low while driving**
Do not continue driving, or your tires and/or wheels may be ruined.
4-3. Do-it-yourself maintenance

Tire inflation pressure

- Tire inflation pressure
  The recommended cold tire inflation pressure and tire size is displayed on the tire and loading information label. (→P. 673)
■ Inspection and adjustment procedure

1 Tire valve
2 Tire pressure gauge

STEP 1 Remove the tire valve cap.
STEP 2 Press the tip of the tire pressure gauge onto the tire valve.
STEP 3 Read the pressure using the gauge graduations.
STEP 4 If the tire inflation pressure is not at the recommended level, adjust the pressure.
   If you add too much air, press the center of the valve to deflate.
STEP 5 After completing the tire inflation pressure measurement and adjustment, apply soapy water to the valve and check for leakage.
STEP 6 Put the tire valve cap back on.

■ Tire inflation pressure check interval

You should check tire inflation pressure every two weeks, or at least once a month. Do not forget to check the spare.
Effects of incorrect tire inflation pressure

Driving with incorrect tire inflation pressure may result in the following:

- Reduced fuel efficiency
- Reduced driving comfort and tire life
- Reduced safety
- Damage to the drive train

If a tire needs frequent inflating, have it checked by your Lexus dealer.

Instructions for checking tire pressure

When checking tire inflation pressure, observe the following:

- Check only when the tires are cold.
  If your vehicle has been parked for at least 3 hours or has not been driven for more than 1 mile or 1.5 km, you will get an accurate cold tire inflation pressure reading.

- Always use a tire pressure gauge.
  The appearance of the tire can be misleading. In addition, tire inflation pressure that is even just a few pounds off can degrade ride and handling.

- Do not reduce tire inflation pressure after driving. It is normal for tire inflation pressure to be higher after driving.

- Never exceed the vehicle capacity weight.
  Passengers and luggage weight should be placed so that the vehicle is balanced.
## CAUTION

- **Proper inflation is critical to save tire performance**
  
  Keep your tires properly inflated. Otherwise, the following conditions may occur and result in an accident causing death or serious injury:
  - Excessive wear
  - Uneven wear
  - Poor handling
  - Possibility of blowouts resulting from overheated tires
  - Poor sealing of the tire bead
  - Wheel deformation and/or tire separation
  - A greater possibility of tire damage from road hazards

## NOTICE

- **When inspecting and adjusting tire inflation pressure**

  Be sure to put the tire valve caps back on. Without the valve caps, dirt or moisture could get into the valve and cause air leakage, which could result in an accident. If the caps are lost, replace them as soon as possible.
If a wheel is bent, cracked or heavily corroded, it should be replaced. Otherwise, the tire may separate from the wheel or cause a loss of handling control.

■ Wheel selection
When replacing wheels, care should be taken to ensure that they are equivalent to those removed in load capacity, diameter, rim width, and inset*.
Replacement wheels are available at your Lexus dealer.

*: Conventionally referred to as “offset”.
Lexus does not recommend using the following:
- Wheels of different sizes or types
- Used wheels
- Bent wheels that have been straightened

■ Aluminum wheel precautions
- Use only Lexus wheel nuts and wrenches designed for use with your aluminum wheels.
- When rotating, repairing or changing your tires, check that the wheel nuts are still tight after driving 1000 miles (1600 km).
- Be careful not to damage the aluminum wheels when using tire chains.
- Use only Lexus genuine balance weights or equivalent and a plastic or rubber hammer when balancing your wheels.

■ When replacing wheels
The wheels of your vehicle are equipped with tire pressure warning valves and transmitters that allow the tire pressure warning system to provide advanced warning in the event of a loss in tire inflation pressure. Whenever wheels are replaced, tire pressure warning valves and transmitters must be installed. (→P. 533)
4-3. Do-it-yourself maintenance

<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Replacing tire pressure warning valves and transmitters</strong></td>
</tr>
<tr>
<td>- Because tire repair or replacement may affect the tire pressure warning valves and transmitters, make sure to have tires serviced by your Lexus dealer or other qualified service shop. In addition, make sure to purchase your tire pressure warning valves and transmitters at your Lexus dealer.</td>
</tr>
<tr>
<td>- Ensure that only genuine Lexus wheels are used on your vehicle. Tire pressure warning valves and transmitters may not work properly with non-genuine wheels.</td>
</tr>
</tbody>
</table>
The air conditioning filter must be cleaned or changed regularly to maintain air conditioning efficiency.

**Removal method**

**STEP 1** Set the air conditioning system to recirculated mode. (→P. 325)

The air conditioning filter case cannot be removed with the system in the outside air mode.

**STEP 2** Turn the “POWER” switch off.

**STEP 3** Open the glove box. Lift and remove the partition.

**STEP 4** Remove the glove box cover.

**STEP 5** Remove the filter cover.
■ Checking interval

Inspect, clean and replace the air conditioning filter according to the maintenance schedule. In dusty areas or areas with heavy traffic flow, early replacement may be required. (For scheduled maintenance information, please refer to the “Owner's Manual Supplement” or “Scheduled Maintenance”.)

■ If air flow from the vents decreases dramatically

The filter may be clogged. Check the filter and replace if necessary.

STEP 6

Remove the air conditioning filter and replace it with a new one.

The “↑UP” mark shown on the filter should be pointing up.

Cleaning method

If the filter is dirty, clean by blowing compressed air through the filter from the underside.

Hold the air gun 2 in. (5 cm) from the filter and blow for approximately 2 minutes at 72 psi (500 kPa, 5.0 kgf/cm² or bar).

If an air gun is not available, have the filter cleaned by your Lexus dealer.
### NOTICE

#### To prevent damage to the system
- When using the air conditioning system, make sure that a filter is always installed.
- When cleaning the filter, do not clean with water.
Replace the battery with a new one if it is discharged.

- You will need the following items:
  - Flathead screwdriver
  - Small Phillips-head screwdriver
  - Lithium battery (CR1632)

- Replacing the battery

  **STEP 1**
  Take out the mechanical key.

  **STEP 2**
  Remove the cover.

  **STEP 3**
  Remove the depleted battery.
  Insert a new battery with the “+” terminal facing up.
Use a CR1632 lithium battery
- Batteries can be purchased at your Lexus dealer, local electrical appliance shops or camera stores.
- Replace only with the same or equivalent type recommended by the manufacturer.
- Dispose of used batteries according to the local laws.

If the electronic key battery is discharged
The following symptoms may occur:
- The smart access system with push-button start and wireless remote control will not function properly.
- The operational range is reduced.

When the card key battery needs to be replaced (if equipped)
The battery for the card key is available only at Lexus dealers. Your Lexus dealer can replace the battery for you.

⚠️ CAUTION
- Removed battery and other parts
  Keep away from children. These parts are small and if swallowed by a child, they can cause choking. Failure to do so could result in death or serious injury.

⚠️ NOTICE
- For normal operation after replacing the battery
  Observe the following precautions to prevent accidents:
  - Always work with dry hands.
    Moisture may cause the battery to rust.
  - Do not touch or move any other components inside the remote control.
  - Do not bend either of the battery terminals.
If any of the electrical components do not operate, a fuse may have blown. If this happens, check and replace the fuses as necessary.

**STEP 1** Turn the “POWER” switch off.

**STEP 2** Remove the engine compartment cover. (→P. 513)

**STEP 3** Open the fuse box cover.

**Engine compartment (type A fuse box)**

Push the tab in and lift the lid off.

**Engine compartment (type B fuse box)**

Push the tab in and lift the lid off.
4-3. Do-it-yourself maintenance

- Engine compartment (type C fuse box)
  Push the tab in and lift the lid off.

- Driver's side instrument panel
  Remove the lid.

- Luggage compartment (type A fuse box)
Luggage compartment (type B fuse box)

Remove the terminal cover.

**STEP 4** After a system failure, see “Fuse layout and amperage ratings” for details about which fuse to check. (→P. 557)

**STEP 5** Remove the fuse with the pull-out tool.

**STEP 6** Check if the fuse has blown.

**Type A**

1 Normal fuse
2 Blown fuse

Replace the blown fuse with a new fuse of an appropriate amperage rating. The amperage rating can be found on the fuse box lid.
4-3. Do-it-yourself maintenance

**Type B**

1. Normal fuse
2. Blown fuse

Replace the blown fuse with a new fuse of an appropriate amperage rating. The amperage rating can be found on the fuse box lid.

**Type C**

1. Normal fuse
2. Blown fuse

Replace the blown fuse with a new fuse of an appropriate amperage rating. The amperage rating can be found on the fuse box lid.

**Type D**

1. Normal fuse
2. Blown fuse

Replace the blown fuse with a new fuse of an appropriate amperage rating. The amperage rating can be found on the fuse box lid.
4-3. Do-it-yourself maintenance

Type E

1 Normal fuse
2 Blown fuse

Replace the blown fuse with a new fuse of an appropriate amperage rating. The amperage rating can be found on the fuse box lid.

Type F

1 Normal fuse
2 Blown fuse

Contact your Lexus dealer.

After a fuse is replaced

- If the lights do not turn on even after the fuse has been replaced, a bulb may need replacement. (→ P. 571)
- If the replaced fuse blows again, have the vehicle inspected by your Lexus dealer.

If there is an overload in the circuit

The fuses are designed to blow, protecting the wiring harness from damage.

**CAUTION**

- To prevent system breakdowns and vehicle fire
  
  Observe the following precautions. Failure to do so may cause damage, and possibly a fire or injury.

  - Never use a fuse of a higher amperage rating than that indicated, or use any other object in place of a fuse.
  - Always use a genuine Lexus fuse or equivalent. Never replace a fuse with a wire, even as a temporary fix. This can cause extensive damage or even fire.
  - Do not modify the fuses or fuse boxes.

**NOTICE**

- Before replacing fuses
  
  Have the cause of electrical overload determined and repaired by your Lexus dealer as soon as possible.
4-3. Do-it-yourself maintenance
Headlight aim

- Removing the engine compartment cover
  ➔ P. 513

- Vertical movement adjusting bolts
  ▶ Vehicles with discharge headlights

  ![Image of discharge headlights with adjustment bolts labeled 1 and 2]
  1. Adjustment bolt A
   2. Adjustment bolt B

  ▶ Vehicles with LED headlights

  ![Image of LED headlights with adjustment bolts labeled 1 and 2]
  1. Adjustment bolt A
   2. Adjustment bolt B

- Before checking the headlight aim

  **STEP 1** Make sure the vehicle has a full tank of gas and the area around the headlight is not deformed.

  **STEP 2** Park the vehicle on level ground.

  **STEP 3** Sit in the driver’s seat.

  **STEP 4** Bounce the vehicle several times.
Adjusting the headlight aim

▼ Vehicles with discharge headlights

**STEP 1**

Turn bolt A in either direction using a Phillips-head screwdriver.

Remember the turning direction and the number of turns in mind.

**STEP 2**

Turn bolt B the same number of turns and in the same direction as step 1 using a Phillips-head screwdriver.

If the headlight cannot be adjusted using this procedure, take the vehicle to your Lexus dealer to adjust the headlight aim.

▼ Vehicles with LED headlights

**STEP 1**

Turn bolt A in either direction using a Phillips-head screwdriver.

Remember the turning direction and the number of turns.
Turn bolt B the same number of turns and in the same direction as step 1 using a Phillips-head screwdriver.

If the headlight cannot be adjusted using this procedure, take the vehicle to your Lexus dealer to adjust the headlight aim.
You may replace the following bulbs by yourself. The difficulty level of replacement varies depending on the bulb. If necessary bulb replacement seems difficult to perform, contact your Lexus dealer. For more information about replacing other light bulbs, contact your Lexus dealer.

■ Preparing for light bulb replacement
  Check the wattage of the light bulb to be replaced. (→P. 675)

■ Removing the engine compartment covers
  →P. 513

■ Turning off the power back door main switch (if equipped)
  →P. 72

■ Front bulb locations
  ▶ Halogen headlights

![Diagram of light bulb locations]
Discharge headlights

- Parking light
- Front side marker light
- Front turn signal light
- Daytime running light

LED headlights

- Headlight high beam and daytime running light
- Front side marker light
- Front turn signal light
- Parking light
Replacing light bulbs

Daytime running lights (discharge headlights)

STEP 1

Turn the bulb base counterclockwise.
Unplug the connector while depressing the lock release.

Headlight high beams and daytime running lights (halogen headlamps)

**STEP 1** Before replacing the bulbs:

- **Left side**

  Move the fuse box.

- **Right side**

  Move the washer fluid filler opening.
4-3. Do-it-yourself maintenance

**Headlight high beams and daytime running lights (LED headlights)**

**STEP 1**

Turn the cover counterclockwise and remove it.

**STEP 2**

Turn the bulb base counterclockwise.

**STEP 3**

Unplug the connector while depressing the lock release.
Unplug the connector while depressing the lock release.

**Headlight low beams (halogen headlights)**

**STEP 1**

Turn the bulb base counterclockwise.

**STEP 2**

Unplug the connector while pressing the lock release.
Parking lights (vehicles without LED headlights)

**STEP 1** Before replacing the bulbs:

- **Left side**
  - Move the fuse box.

- **Right side**
  - Move the washer fluid filler opening.

**STEP 2**

- Turn the bulb base counterclockwise.
4-3. Do-it-yourself maintenance

Remove the light bulb.

Parking lights (vehicles with LED headlights)

Before replacing the bulbs:

Left side

Move the fuse box.

Right side

Move the washer fluid filler opening.
▲ Front turn signal lights

**STEP 1** Before replacing the bulbs:

- **Left side**

**STEP 2**

Turn the bulb base counterclockwise.

**STEP 3**

Remove the light bulb.

**STEP 1**

Move the fuse box.
4-3. Do-it-yourself maintenance

► Right side

Move the washer fluid filler opening.

Turn the bulb base counterclockwise.

Remove the light bulb.
■ Front side marker lights (vehicles without LED headlights)

**STEP 1** Before replacing the bulbs:

➤ **Left side**

Move the fuse box.

➤ **Right side**

Move the washer fluid filler opening.

**STEP 2**

Turn the bulb base counterclockwise.
Do-it-yourself maintenance

STEP 3

Front side marker lights (vehicles with LED headlights)

STEP 1

Before replacing the bulbs:

- Left side

  Move the fuse box.

- Right side

  Move the washer fluid filler opening.

STEP 2

Remove the light bulb.
Turn the bulb base counterclockwise.

Remove the light bulb.

Remove the access hole cover. Use a flathead screwdriver wrapped in a cloth.

Turn the bulb base counterclockwise.

1 Tail light
2 Rear turn signal light
Do-it-yourself maintenance

3. Remove the light bulb.
   1. Tail light
   2. Rear turn signal light

**Rear side marker lights (right side)**

1. Remove the bolts using a Phillips-head screwdriver and remove the clip.

**STEP 1**

1. Removing the clip
2. Installing the clip

**STEP 2**

Turn the bulb base counterclockwise.
4-3. Do-it-yourself maintenance

Maintenance and care

STEP 3

Remove the light bulb.

■ Rear side marker lights (left side)

STEP 1

Turn the bulb base counterclockwise.

STEP 2

Remove the light bulb.

■ Tail and back-up lights

STEP 1

Remove the access hole cover.

Use a flathead screwdriver wrapped in a cloth.
Turn the bulb base counterclockwise.

1. Tail light
2. Back-up light

Remove the light bulb.

1. Tail light
2. Back-up light

Lights other than the above

If any of the lights listed below has burnt out, have it replaced by your Lexus dealer.

- Headlight low beams (discharge bulbs)
- Front fog lights
- Side turn signal lights
- Stop lights
- High mounted stoplight
- License plate lights
■ Discharge headlights

If voltage to the discharge bulbs is insufficient, the bulbs may not come on, or may go out temporarily. The discharge bulbs will come on when normal power is restored.

■ LED light bulbs

The headlight low beams (if equipped), side turn signal lights, stop lights, licence plate lights and high mounted stoplight consist of a number of LEDs. If any of the LEDs burn out, take your vehicle to your Lexus dealer to have the light replaced.

■ Condensation build-up on the inside of the lens

Contact your Lexus dealer for more information in the following situations. Temporary condensation build-up on the inside of the headlight lens does not indicate a malfunction.

● Large drops of water are built up on the inside of the lens.
● Water has built up inside the headlight.
### CAUTION

#### Replacing light bulbs
- **Turn off the lights.** Do not attempt to replace the bulb immediately after turning off the lights. The bulbs become very hot and may cause burns.
- **Do not touch the glass portion of the light bulb with bare hands.** Hold the bulb by the plastic or metal portion. If the bulb is scratched or dropped it may blow out or crack.
- **Fully install light bulbs and any parts used to secure them.** Failure to do so may result in heat damage, fire, or water entering the headlight unit. This may damage the headlights or cause condensation to build up on the lens.

#### Discharge headlights (if equipped)
- **Contact your Lexus dealer before replacing discharge headlights (including light bulbs).**
- **Do not touch the discharge headlight’s high voltage socket when the headlights are turned on.** An extremely high voltage of 20000 V will be discharged and could result in serious injury or death by electric shock.
- **Do not attempt to take apart or repair the low beam discharge headlight bulbs, connectors, power supply circuits, or related components.** Doing so could result in electric shock and serious injury or death.

#### To prevent damage or fire
- Make sure bulbs are fully seated and locked.
5-1. Essential information

- Emergency flashers ............... 590
- If your vehicle needs to be towed ........................................ 591
- If you think something is wrong ........................................... 597

5-2. Steps to take in an emergency

- If a warning light turns on or a warning buzzer sounds .......... 598
- If a warning message is displayed ....................................... 608
- If you have a flat tire ......................................................... 629
- If the hybrid system will not start ...................................... 643
- If the shift lever cannot be shifted from P .......................... 645
- If you lose your keys ......................................................... 646
- If the electronic key does not operate properly .................. 647
- If the vehicle 12-volt battery is discharged ....................... 650
- If your vehicle overheats .................................................... 655
- If the vehicle becomes stuck .............................................. 660
- If your vehicle has to be stopped in an emergency ........... 661
Use the emergency flashers if the vehicle malfunctions or is involved in an accident.

Press the switch to flash all the turn signal lights. To turn them off, press the switch once again.

---

**NOTICE**

**To prevent 12-volt battery discharge**

Do not leave the emergency flashers on longer than necessary when the hybrid system is not operating.
If towing is necessary, we recommend having your vehicle towed by your Lexus dealer or a commercial towing service, using a lift-type truck or a flatbed truck. Use a safety chain system for all towing, and abide by all state/provincial and local laws.

**Before towing**

The following may indicate a problem with your hybrid transmission. Contact your Lexus dealer before towing.

- The hybrid system is operating but the vehicle will not move.
- The vehicle makes an abnormal sound.

**Emergency towing**

If a tow truck is not available in an emergency, your vehicle may be temporarily towed using a cable or chain secured to the emergency towing eyelet(s). This should only be attempted on hard surfaced roads for short distances at under 18 mph (30 km/h).

A driver must be in the vehicle to steer and operate the brakes. The vehicle’s wheels, drive train, axles, steering and brakes must be in good condition.
Installing towing eyelets

**STEP 1**
Remove the eyelet cover using a flathead screwdriver. To protect the bodywork, place a rag between the screwdriver and the vehicle body, as shown in the illustration.

**STEP 2**
Insert the towing eyelet into the hole and tighten partially by hand.

**STEP 3**
Tighten down the towing eyelet securely using a wheel nut wrench.
Towing with a sling-type truck

Do not tow with a sling-type truck to prevent body damage.

Towing with a wheel-lift type truck

- From the front (2WD models)
  Release the parking brake.

- From the front (AWD models)
  Use a towing dolly under the rear wheels.
From the rear

Use a towing dolly under the front wheels.

Using a flatbed truck

If your Lexus is transported by a flatbed truck, it should be tied down at the locations shown in the illustration.

If you use chains or cables to tie down your vehicle, the angles shaded in black must be 45°.

Do not overly tighten the tie downs or the vehicle may be damaged.
Before emergency towing

**STEP 1** Release the parking brake.
**STEP 2** Shift the shift lever to N.
**STEP 3** Turn the “POWER” switch to ACCESSORY (hybrid system off) or ON (hybrid system operating) mode.

Emergency towing eyelet location
→ P. 630

---

**CAUTION**

Caution while towing

- Use extreme caution when towing the vehicle. Avoid sudden starts or erratic driving maneuvers which place excessive stress on the emergency towing eyelets and the cables or chains. Always be cautious of the surroundings and other vehicles while towing.
- If the hybrid system is off, the power assist for the brakes and steering will not function, making steering and braking more difficult.

Installing towing eyelets to the vehicle

Make sure that towing eyelets are installed securely. If not securely installed, towing eyelets may come loose during towing. This may lead to accidents that cause serious injury or even death.

### NOTICE

- **To prevent causing serious damage to the hybrid transmission when towing using a wheel-lift type truck**
  
  2WD models: Never tow this vehicle from the rear with the front wheels on the ground.
  
  AWD models: Never tow this vehicle with any of the wheels in contact with the ground.

- **To prevent damaging the vehicle when towing using a wheel-lift type truck**
  
  When raising the vehicle, ensure adequate ground clearance for towing at the opposite end of the raised vehicle. Without adequate clearance, the vehicle could be damaged while being towed.

- **To prevent body damage when towing using a sling-type truck**
  
  Do not tow with a sling-type truck, either from the front or rear.
If you notice any of the following symptoms, your vehicle probably needs adjustment or repair. Contact your Lexus dealer as soon as possible.

**Visible symptoms**
- Fluid leaks under the vehicle.  
  (Water dripping from the air conditioning after use is normal.)
- Flat-looking tires or uneven tire wear
- Engine coolant temperature gauge needle continually points higher than normal.

**Audible symptoms**
- Changes in exhaust sound
- Excessive tire squeal when cornering
- Strange noises related to the suspension system
- Pinging or other noises related to the hybrid system

**Operational symptoms**
- Engine missing, stumbling or running rough
- Appreciable loss of power
- Vehicle pulls heavily to one side when braking.
- Vehicle pulls heavily to one side when driving on a level road.
- Loss of brake effectiveness, spongy feeling, pedal almost touches the floor
**5-2. Steps to take in an emergency**

If a warning light turns on or a warning buzzer sounds...

Calmly perform the following actions if any of the warning lights comes on or flashes. However, if any of the warning lights continue to come on, have the vehicle inspected by your Lexus dealer.

---

**Stop the vehicle immediately. Continuing to drive the vehicle may be dangerous.**

The following warning indicates a possible problem in the brake system. Immediately stop the vehicle in a safe place and contact your Lexus dealer.

### Warning light

<table>
<thead>
<tr>
<th>Warning light</th>
<th>Warning light/Details</th>
<th>Correction procedure</th>
</tr>
</thead>
</table>
| **Tire pressure warning light** | When the light comes on: Low tire inflation pressure such as  
- Natural causes (→P. 603)  
- Flat tire (→P. 629) | Adjust the tire inflation pressure (including the full-size spare tire) to the specified level.  
The light will turn off after a few minutes. In case the light does not turn off even if the tire inflation pressure is adjusted, have the system checked by your Lexus dealer. |
| | When the light comes on after blinking for 1 minute: Malfunction in the tire pressure warning system (→P. 604) | Have the system checked by your Lexus dealer. |

*1: Open door warning buzzer:

The open door warning buzzer sounds to alert one or more of the doors is not fully closed (with the vehicle having reached a speed of 3 mph [5 km/h]). (→P. 614)

*2: Driver’s and front passenger’s seat belt buzzer:

The driver’s and front passenger’s seat belt buzzer sounds to alert the driver and front passenger that his or her seat belt is not fastened. The buzzer sounds intermittently for 10 seconds after the vehicle reaches a speed of 12 mph (20 km/h). Then, if the seat belt is still unfastened, the buzzer will sound in a different tone for 20 more seconds.
5-2. Steps to take in an emergency

■ SRS warning light

This warning light system monitors the airbag sensor assembly, front airbag sensors, side and curtain shield airbag sensors, curtain shield airbag sensors, driver’s seat position sensor, driver’s seat belt buckle switch, front passenger occupant classification system, “AIR BAG ON” indicator light, “AIR BAG OFF” indicator light, front passenger’s seat belt buckle switch, seat belt pretensioner assemblies, inflators, interconnecting wiring and power sources. (→ P. 132)

■ Front passenger detection sensor, passenger seat belt reminder and warning buzzer

● If luggage is placed on the front passenger seat, the front passenger detection sensor may cause the warning light to flash and the warning buzzer to sound even if a passenger is not sitting in the seat.

● If a cushion is placed on the seat, the sensor may not detect a passenger, and the warning light may not operate properly.

■ Electric power steering system warning light

When the 12-volt battery charge becomes insufficient or the voltage temporarily drops, the electric power steering system warning light may come on.

■ If the malfunction indicator lamp comes on while driving

Check that the fuel tank cap is not loose. If it is, tighten the cap securely.

The lamp will go off after several driving trips.

If the light does not go off even after several trips, contact your Lexus dealer as soon as possible.

■ When the tire pressure warning light comes on

Check the tire inflation pressure and adjust to the appropriate level. Pushing the tire pressure warning reset switch will not turn off the tire pressure warning light.

■ The tire pressure warning light may come on due to natural causes

The tire pressure warning light may come on due to natural causes such as natural air leaks and tire inflation pressure changes caused by temperature. In this case, adjusting the tire inflation pressure will turn off the warning light (after a few minutes).
When a tire is replaced with a spare tire

The compact spare tire is not equipped with a tire pressure warning valve and transmitter. If a tire goes flat, the tire pressure warning light will not turn off even though the flat tire has been replaced with the spare tire. Replace the spare tire with the repaired tire and adjust the tire inflation pressure. The tire pressure warning light will go off after a few minutes.

If the tire pressure warning system is not functioning

The tire pressure warning system will be disabled in the following conditions:

(When the condition becomes normal, the system will work properly.)

- If tires not equipped with tire pressure warning valves and transmitters are used
- If the ID code on the tire pressure warning valves and transmitters is not registered in the tire pressure warning computer
- If the tire pressure warning select switch is set to a different tire setting
- If the tire inflation pressure is 73 psi (500 kPa, 5.1 kgf/cm² or bar) or higher

The tire pressure warning system may be disabled in the following conditions:

(When the condition becomes normal, the system will work properly.)

- If electronic devices or facilities using similar radio wave frequencies are nearby
- If a radio set at similar frequencies is in use in the vehicle
- If a window tint that affects the radio wave signals is installed
- If there is a lot of snow or ice on the vehicle, in particular around the wheels or wheel housings
- If non-genuine Lexus wheels are used (Even if you use Lexus wheels, the tire pressure warning system may not work properly with some types of tires.)
- If tire chains are used
- Vehicles with a full-size spare tire: If the spare tire is in a location subject to poor radio wave signal reception
- Vehicles with a full-size spare tire: If a large metallic object which can interfere with signal reception is put in the luggage compartment

If the tire pressure warning light frequently comes on after blinking for 1 minute

If the tire pressure warning light frequently comes on after blinking for 1 minute when the “POWER” switch is turned to ON mode, have it checked by your Lexus dealer.
■ Customization

The vehicle speed linked seat belt reminder buzzer can be disabled.
(Customizable features → P. 693)

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>■ If the electric power steering system warning light comes on</td>
</tr>
</tbody>
</table>

The steering wheel may become extremely heavy.
If the steering wheel becomes heavier than usual when operating, hold it firmly and operate it using more force than usual. If the electric power steering system warning light comes on, have the vehicle inspected by your Lexus dealer immediately.

| ■ If the tire pressure warning light comes on |

Be sure to observe the following precautions. Failure to do so could cause loss of vehicle control and result in death or serious injury.

- Stop your vehicle in a safe place as soon as possible. Adjust the tire inflation pressure immediately.
- If the tire pressure warning light comes on even after tire inflation pressure adjustment, it is probable that you have a flat tire. Check the tires. If a tire is flat, change it with the spare tire and have the flat tire repaired by the nearest Lexus dealer.
- Avoid abrupt maneuvering and braking. If the vehicle tires deteriorate, you could lose control of the steering wheel or the brakes.

| ■ If a blowout or sudden air leakage should occur |

The tire pressure warning system may not activate immediately.
CAUTION

Maintenance of the tires

Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label (tire and load information label). (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label [tire and load information label], you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS-tire pressure warning system) that illuminates a low tire pressure telltale (tire pressure warning light) when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale (tire pressure warning light) illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability.

Please note that the TPMS (tire pressure warning system) is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale (tire pressure warning light).

Your vehicle has also been equipped with a TPMS (tire pressure warning system) malfunction indicator to indicate when the system is not operating properly. The TPMS (tire pressure warning system) malfunction indicator is combined with the low tire pressure telltale (tire pressure warning light). When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended.

TPMS (tire pressure warning system) malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the TPMS (tire pressure warning system) from functioning properly. Always check the TPMS (tire pressure warning system) malfunction telltale after replacing one or more tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS (tire pressure warning system) to continue to function properly.
NOTICE

Precaution when installing a different tire

When a tire of a different specification or maker is installed, the tire pressure warning system may not operate properly.
5-2. Steps to take in an emergency

If a warning message is displayed

If a warning is shown on the multi-information display, stay calm and perform the following actions:

1. Multi-information display
   - A warning message is displayed.

2. Master warning light
   - The master warning light also comes on or flashes in order to indicate that a message is currently being displayed on the multi-information display.

If any of the warning lights comes on again after the following actions have been performed, contact your Lexus dealer.

Stop the vehicle immediately. Continuing to drive the vehicle may be dangerous.

The following warning indicates a possible problem in the brake system. Immediately stop the vehicle in a safe place and contact your Lexus dealer.

■ Warning light display in radar cruise mode
In the following cases, the warning light may not be displayed even if vehicle-to-vehicle distance decreases:
● When your vehicle and the vehicle ahead are traveling at the same speed or the vehicle ahead is traveling more quickly than your vehicle
● When the vehicle ahead is traveling at a very low speed
● Immediately after cruise control speed is set
● At the instant the accelerator pedal is depressed

■ After changing the engine oil (U.S.A. only)
Make sure to reset the oil maintenance data. (→P. 515)
5-2. Steps to take in an emergency

If you have a flat tire

Remove the flat tire and replace it with the spare provided.

■ Before jacking up the vehicle
  ● Stop the vehicle on a hard, flat surface.
  ● Set the parking brake.
  ● Shift the shift lever to P.
  ● Vehicles with electronically modulated air suspension:
    Turn off the height control. (→ P. 264)
  ● Stop the hybrid system.
  ● Turn on the emergency flashers.
5-2. Steps to take in an emergency

■ Location of the spare tire, jack and tools

► Vehicles with a compact spare tire

- Jack handle
- Wheel nut wrench
- Tool bag
- Towing eyelet

► Vehicles with a full-size spare tire

- Jack handle
- Wheel nut wrench
- Tool bag
- Towing eyelet
Taking out the jack

► Vehicles with a compact spare tire

**STEP 1**
Pull the lever upward to fold back the front part of the deck board.

**STEP 2**
Pull the folded deck board upright.

**STEP 3**
Pull on the attached hook to extend the string.
5-2. Steps to take in an emergency

**STEP 4**
Use the hook to secure the deck board as shown in the illustration.

**STEP 5**
Remove the jack after removing the hook.

**Vehicles with a full-size spare tire**

**STEP 1**
Pull the lever upward to fold back the front part of the deck board.

**STEP 2**
Pull on the attached hook to extend the string.
When trouble arises

5-2. Steps to take in an emergency

Use the hook to secure the deck board as shown in the illustration.

Remove the jack after removing the hook.
Taking out the spare tire

**STEP 1** Lift up the deck board. (See “Taking out the jack” for details.)

**STEP 2** Remove the spare tire cover.

**STEP 3** Loosen the center fastener that secures the spare tire.

- Vehicles with a compact spare tire

- Vehicles with a full-size spare tire
When trouble arises

5-2. Steps to take in an emergency

Replacing a flat tire

<table>
<thead>
<tr>
<th>STEP</th>
<th>Flat tire</th>
<th>Wheel chock positions</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Front</td>
<td>Behind the rear right-hand side tire</td>

</tr>
<tr>
<td></td>
<td>Right-hand side</td>
<td>In front of the front left-hand side tire</td>
</tr>
</tbody>
</table>

Chock the tires.

Slightly loosen the wheel nuts (one turn).

Turn the tire jack portion “A” by hand until the notch of the jack is in contact with the jack point.
5-2. Steps to take in an emergency

STEP 4

Raise the vehicle until the tire is slightly raised off the ground.

STEP 5

Remove all the wheel nuts and the tire.

When resting the tire on the ground, place the tire so that the wheel design faces up to avoid scratching the wheel surface.
Installing the spare tire

STEP 1
Remove any dirt or foreign matter from the wheel contact surface.
If foreign matter is on the wheel contact surface, the wheel nuts may loosen while the vehicle is in motion, causing the tire to come off.

STEP 2
Install the spare tire and loosely tighten each wheel nut by hand by approximately the same amount.

▸ Vehicles with a compact spare tire

Tighten the nuts until the tapered portion comes into loose contact with the disc wheel seat.

▸ Vehicles with a full-size spare tire

Turn the nuts until the washers come into contact with the wheel.
5-2. Steps to take in an emergency

Lower the vehicle.

Firmly tighten each wheel nut two or three times in the order shown in the illustration.

Tightening torque:
76 ft•lbf (103 N•m, 10.5 kgf•m)

Stow the flat tire, tire jack and all tools.

The compact spare tire
- The compact spare tire is identified by the label “TEMPORARY USE ONLY” on the tire sidewall. Use the compact spare tire temporarily, and only in an emergency.
- Make sure to check the tire inflation pressure of the compact spare tire. (→P. 673)

When using the compact spare tire
As the compact spare tire is not equipped with a tire pressure warning valve and transmitter, low inflation pressure of the spare tire will not be indicated by the tire pressure warning system. Also, if you replace the compact spare tire after the tire pressure warning light comes on, the light remains on.
If you have a flat front tire on a road covered with snow or ice

Install the compact spare tire on one of the rear wheels of the vehicle. Perform the following steps and fit tire chains to the front tires:

- **STEP 1** Replace a rear tire with the compact spare tire.
- **STEP 2** Replace the flat front tire with the tire removed from the rear of the vehicle.
- **STEP 3** Fit tire chains to the front tires.

After completing the tire change

The tire pressure warning system (if equipped) must be reset. (→P. 533)

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
</table>

- **Using the tire jack**

Improper use of the tire jack may cause the vehicle to suddenly fall off the jack, leading to death or serious injury.

- Do not use the tire jack for any purpose other than replacing tires or installing and removing tire chains.
- Only use the tire jack that comes with this vehicle for replacing a flat tire.
  - Do not use it on other vehicles, and do not use other tire jacks for replacing tires on this vehicle.
- Always check that the tire jack is securely set to the jack point.
- Do not put any part of your body under the vehicle while it is supported by the jack.
- Do not start or run the hybrid system while your vehicle is supported by the jack.
- Do not raise the vehicle while someone is inside.
- When raising the vehicle, do not put an object on or under the jack.
- Do not raise the vehicle to a height greater than that required to replace the tire.
- Use a jack stand if it is necessary to get under the vehicle.
- Vehicles with electronically modulated air suspension: Be sure to turn off the height control and stop the hybrid system.

Take particular care when lowering the vehicle to ensure that no one working on or near the vehicle may be injured.
CAUTION

Replacing a flat tire

Observe the following precautions to reduce the risk of death or serious injury:

- Do not touch the disc wheels or the area around the brakes immediately after the vehicle has been driven.
  After the vehicle has been driven the disc wheels and the area around the brakes will be extremely hot. Touching these areas with hands, feet or other body parts while changing a tire, etc. may result in burns.

- Failure to follow these precautions could cause the wheel nuts to loosen and the tire to fall off, resulting in death or serious injury.

  - Never use oil or grease on the wheel bolts or wheel nuts. Oil and grease may cause the wheel nuts to be excessively tightened, leading to bolt or disc wheel damage. In addition, the oil or grease can cause the wheel nuts to loosen and the wheel may fall off, causing a serious accident. Remove any oil or grease from the wheel bolts or wheel nuts.

  - Have the wheel nuts tightened with a torque wrench to 76 ft•lbf (103 N•m, 10.5 kgf•m) as soon as possible after changing wheels.

  - When installing a tire, only use wheel nuts that have been specifically designed for that wheel.

  - If there are any cracks or deformations in the bolt screws, nut threads or bolt holes of the wheel, have the vehicle inspected by your Lexus dealer.

Failure to follow these precautions could cause the wheel nuts to loosen and the tire to fall off, resulting in death or serious injury.

Replacing a flat tire for vehicles with power back door

In cases such as when replacing tires, make sure to turn off the power back door main switch (→P. 72). Failure to do so may cause the back door to operate unintentionally if the power back door switch is accidentally touched, resulting in hands and fingers being caught and injured.

When using the compact spare tire

- Remember that the compact spare tire provided is specifically designed for use with your vehicle. Do not use your compact spare tire on another vehicle.

- Do not use more than one compact spare tire simultaneously.

- Replace the compact spare tire with a standard tire as soon as possible.

- Avoid sudden acceleration, deceleration and braking, as well as sharp cornering.
When trouble arises

## 5-2. Steps to take in an emergency

### CAUTION

#### When the compact spare tire is attached

The vehicle speed may not be correctly detected, and the following systems may not operate correctly:

- ABS & Brake assist
- VSC
- TRAC
- VDIM
- Intuitive parking assist (if equipped)
- Navigation system (if equipped)
- Cruise control (if equipped)
- Dynamic radar cruise control (if equipped)
- Electronically modulated air suspension (if equipped)
- Pre-Collision System (if equipped)

Also, not only can the following system not be utilized fully, but it may even negatively affect the drive-train components:

- AWD system (if equipped)

#### Speed limit when using the compact spare tire

Do not drive at speeds in excess of 50 mph (80 km/h) when a compact spare tire is installed on the vehicle.

The compact spare tire is not designed for driving at high speeds. Failure to observe this precaution may lead to an accident causing death or serious injury.
5-2. Steps to take in an emergency

⚠️ NOTICE

■ Do not drive the vehicle with a flat tire
   Do not continue driving with a flat tire.
   Driving even a short distance with a flat tire can damage the tire and the wheel beyond repair.

■ Be careful when driving over bumps with the compact spare tire installed on the vehicle.
   The vehicle becomes lower when driving with the compact spare tire compared to when driving with standard tires. Be careful when driving over uneven road surfaces.

■ Driving with tire chains and the compact spare tire
   Do not fit tire chains to the compact spare tire.
   Tire chains may damage the vehicle body and adversely affect driving performance.

■ When replacing the tires
   When removing or fitting the wheels, tires or the tire pressure warning valve and transmitter, contact your Lexus dealer as the tire pressure warning valve and transmitter may be damaged if not handled correctly.

■ To avoid damage to the tire pressure warning valves and transmitters
   When a tire is repaired with liquid sealants, the tire pressure warning valve and transmitter may not operate properly. If a liquid sealant is used, contact your Lexus dealer or other qualified service shop as soon as possible. Make sure to replace the tire pressure warning valve and transmitter when replacing the tire. (→P. 533)
5-2. Steps to take in an emergency
If the hybrid system will not start

Reasons for the hybrid system not starting vary depending on the situation. Check the following and perform the appropriate procedure:

■ The hybrid system will not start even though the correct starting procedure is being followed. (→P. 176)
  One of the following may be the cause of the problem:
  ● The electronic key may not be functioning properly. (→P. 648)
  ● There may be a malfunction in the immobilizer system. (→P. 124)
  ● There may be a malfunction in the steering lock system.
  ● The hybrid system may be malfunctioning due to an electrical problem such as an open circuit or a blown fuse. However, depending on the type of malfunction, an interim measure is available to start the hybrid system. (→P. 644)

■ The interior lights and headlights are dim, or the horn does not sound or sounds at a low volume.
  One of the following may be the cause of the problem:
  ● The 12-volt battery may be discharged. (→P. 650)
  ● The 12-volt battery terminal connections may be loose or corroded.

■ The interior lights and headlights do not turn on, or the horn does not sound.
  One of the following may be the cause of the problem:
  ● One or both of the 12-volt battery terminals may be disconnected.
  ● The 12-volt battery may be discharged. (→P. 650)

Contact your Lexus dealer if the problem cannot be repaired, or if repair procedures are unknown.
5-2. Steps to take in an emergency

Emergency start function

When the hybrid system does not start, the following steps can be used as an interim measure to start the hybrid system if the “POWER” switch is functioning normally:

**STEP 1** Set the parking brake.
**STEP 2** Shift the shift lever to P.
**STEP 3** Turn the “POWER” switch to ACCESSORY mode.
**STEP 4** Press and hold the “POWER” switch for about 15 seconds while depressing the brake pedal firmly.

Even if the hybrid system can be started using the above steps, the system may be malfunctioning. Have the vehicle inspected by your Lexus dealer.
If the shift lever cannot be shifted with your foot on the brake pedal, there may be a problem with the shift lock system (a system to prevent accidental operation of the shift lever). Have the vehicle inspected by your Lexus dealer immediately.

The following steps may be used as an emergency measure to ensure that the shift lever can be shifted:

**STEP 1** Set the parking brake.

**STEP 2** Turn the “POWER” switch to ACCESSORY mode.

**STEP 3** Depress the brake pedal.

**STEP 4** Pry the cover up with a flathead screwdriver or equivalent.

**STEP 5** Press the shift lock override button.

The shift lever can be shifted while the button is pressed.
New genuine Lexus keys can be made by your Lexus dealer using the other keys and the key number stamped on your key number plate.
If the electronic key does not operate properly

If communication between the electronic key and vehicle is interrupted (→P. 57) or the electronic key cannot be used because the battery is depleted, the smart access system with push-button start and wireless remote control cannot be used. In such cases, the doors can be opened and the hybrid system can be started by following the procedure below.

**Locking and unlocking the side doors and key linked functions**

Use the mechanical key (→P. 48) in order to perform the following operations (driver's door only):

1. Locks all the doors
2. Closes the windows and moon roof (turn and hold)
3. Unlocks the door
   - Turning the key rearward unlocks the driver's door. Turning the key once again unlocks the other doors.
4. Opens the windows and moon roof (turn and hold)
Changing “POWER” switch modes and starting the hybrid system

**STEP 1** Ensure that the shift lever is in P and depress the brake pedal.

**STEP 2** Touch the Lexus emblem side of the electronic key to the “POWER” switch.

If any of the doors is opened or closed while the key is being touched to the switch, an alarm will sound to indicate that the start function cannot detect the electronic key.

**STEP 3** To change “POWER” switch modes: Within 10 seconds of the buzzer sounding, release the brake pedal and press the “POWER” switch. Modes can be changed each time the switch is pressed. (→P. 177)

To start the hybrid system: Press the “POWER” switch within 10 seconds of the buzzer sounding, keeping the brake pedal depressed.

In the event that the hybrid system still cannot be operated, contact your Lexus dealer.
■ Stopping the hybrid system
Shift the shift lever to P and press the “POWER” switch as you normally do when stopping the hybrid system.

■ Replacing the key battery
As the above procedure is a temporary measure, it is recommended that the electronic key battery be replaced immediately when the battery is depleted. (→P. 550)
If the vehicle 12-volt battery is discharged

The following procedures may be used to start the hybrid system if the vehicle’s 12-volt battery is discharged. You can also call your Lexus dealer or a qualified repair shop.

If you have a set of jumper (or booster) cables and a second vehicle with a 12-volt battery, you can jump start your vehicle by following the steps below.

**STEP 1** Open the hood and remove the engine compartment covers. (→ P. 513)

**STEP 2** Remove the fuse box cover and open the exclusive jump starting terminal cover.

**STEP 3** Connect the jumper cables according to the following procedure:

1. Connect a positive jumper cable clamp to the exclusive jump starting terminal on your vehicle
2. Connect a positive jumper cable clamp to the positive (+) battery terminal on the second vehicle
3. Connect a negative cable clamp to the negative (-) battery terminal on the second vehicle
4 Connect the clamp at the other end of the negative cable to a solid, stationary, unpainted metallic point away from the exclusive jump starting terminal and any moving parts, as shown in the illustration.

**STEP 4** Start the engine of the second vehicle. Increase the engine speed slightly and maintain that level for approximately 5 minutes to recharge the 12-volt battery of your vehicle.

**STEP 5** Open and close any of the doors of your vehicle with the “POWER” switch off.

**STEP 6** Maintain the engine speed of the second vehicle and start the hybrid system of your vehicle by turning the “POWER” switch to ON mode.

**STEP 7** Make sure the “READY” indicator comes on. If the indicator does not come on, contact your Lexus dealer.

**STEP 8** Once the hybrid system has started, remove the jumper cables in the exact reverse order from which they were connected. Once the hybrid system starts, have the vehicle inspected at your Lexus dealer as soon as possible.
5-2. Steps to take in an emergency

- **Starting the hybrid system when the 12-volt battery is discharged**
  The hybrid system cannot be started by push-starting.

- **To prevent 12-volt battery discharge**
  - Turn off the headlights and the audio system while the hybrid system is off.
  - Turn off any unnecessary electrical components when the vehicle is running at a low speed for an extended period, such as in heavy traffic.

- **When the 12-volt battery is removed or discharged**
  - The power back door must be initialized. (→P. 702)
  - The hybrid system may not start. (→P. 529)

- **Charging the 12-volt battery**
  The electricity stored in the 12-volt battery will discharge gradually even when the vehicle is not in use, due to natural discharge and the draining effects of certain electrical appliances. If the vehicle is left for a long time, the 12-volt battery may discharge, and the hybrid system may be unable to start. (The 12-volt battery recharges automatically while the hybrid system is operating.)

---

**CAUTION**

- **Avoiding 12-volt battery fires or explosions**
  Observe the following precautions to prevent accidentally igniting the flammable gas that may be emitted from the 12-volt battery:
  - Make sure each jumper cable is connected to the correct terminal and that it is not unintentionally in contact with any other than the intended terminal.
  - Do not allow the other end of the jumper cable connected to the “+” terminal to come into contact with any other parts or metal surfaces in the area, such as brackets or unpainted metal.
  - Do not allow the + and - clamps of the jumper cables to come into contact with each other.
  - Do not smoke, use matches, cigarette lighters or allow open flame near the 12-volt battery.

5-2. Steps to take in an emergency  
If your vehicle overheats

The following may indicate that your vehicle is overheating:

- “ENGINE OVERHEAT” is shown on the multi-information display: 
  The engine may be overheating.
- “HYBRID SYSTEM OVERHEAT” is shown on the multi-information display: 
  A hybrid system component such as the power control unit or an electric motor (traction motor) may be overheating.

Follow the correction procedure as described below.

**Correction procedures**

**If “ENGINE OVERHEAT” is shown on the multi-information display**

**STEP 1** Stop the vehicle in a safe place and turn off the air conditioning system.

**STEP 2** Check to see if steam is coming out from the engine area.
  - If you see steam: Stop the hybrid system. Carefully lift the hood after the steam subsides and then restart the hybrid system.
  - If you do not see steam: Leave the hybrid system operating and carefully lift the hood.

**STEP 3** Check to see if the cooling fans are operating.
  - If the fans are operating: Wait until the “ENGINE OVERHEAT” message disappears and then stop the hybrid system.
  - If the fans are not operating: Stop the hybrid system immediately and call your Lexus dealer.
After the hybrid system has cooled down sufficiently, check the engine coolant level and inspect the cooling system for leaks.

If the engine compartment cover needs to be removed. (→P. 513)

Add engine coolant if necessary.

Water can be used in an emergency if engine coolant is unavailable. (→P. 670)

Have the vehicle inspected at the nearest Lexus dealer as soon as possible.
If “HYBRID SYSTEM OVERHEAT” is shown on the multi-information display

**STEP 1** Leave the hybrid system operating and carefully lift the hood.

**STEP 2** Check if the cooling fans are operating.

If the fans are operating:
- Wait until the “HYBRID SYSTEM OVERHEAT” message disappears and then stop the hybrid system.
- If the message does not disappear, call your Lexus dealer.

If the fans are not operating:
- Stop the hybrid system immediately and call your Lexus dealer.

**STEP 3**

Stop the vehicle in a safe place and turn off the air conditioning system.

Ensure that the opening for the oil cooler is not blocked by dirt or any other foreign substance. If the opening is not blocked or if the message does not disappear after some time the opening has been cleaned, proceed to STEP 2.

After the hybrid system has cooled down, check the power control unit coolant level and inspect the cooling system for leaks.

If the engine compartment cover needs to be removed. (→P. 513)
Add power control unit coolant if necessary.

Water can be used in an emergency if power control unit coolant is unavailable. (→P. 670)

Have the vehicle inspected at the nearest Lexus dealer as soon as possible.

### Overheating

The following symptoms may occur when your vehicle is overheating:

- Hybrid system output decreases.
- Steam comes out from the engine area.

#### CAUTION

- **To prevent an accident or injury when inspecting under the hood of your vehicle**
  - If steam is seen coming from under the hood, do not open the hood until the steam has subsided. The engine compartment may be very hot, causing serious injuries such as burns.
  - Check that the indicator on the “POWER” switch and the “READY” indicator are off.
  - For vehicles with a hybrid system, there are times when the gasoline engine automatically starts to run or the cooling fans suddenly start to operate. Do not touch or approach the rotating parts of the belt or fans. Doing so may lead to fingers, clothes or tools getting caught, resulting in injury.
  - Do not loosen the radiator cap while the hybrid system and radiator are hot. Serious injuries, such as burns, may result from hot coolant and steam released under pressure.
NOTICE

When adding engine/power control unit coolant
Wait until the hybrid system has cooled down before adding engine/power control unit coolant.
When adding coolant, do so slowly. Adding cool coolant to a hot hybrid system too quickly can cause damage to the hybrid system.

To prevent damage to the cooling system
Observe the following precautions:
- Avoid contaminating the coolant with foreign matter (such as sand or dust etc.).
- Do not use commercially available coolant additives.
5-2. Steps to take in an emergency
If the vehicle becomes stuck

Carry out the following procedures if the tires spin or the vehicle becomes stuck in mud, dirt or snow:

**STEP 1** Stop the hybrid system. Set the parking brake and shift the shift lever to P.

**STEP 2** Remove the mud, snow or sand from around the stuck tire.

**STEP 3** Place wood, stones or some other material under the tires to help provide traction.

**STEP 4** Restart the hybrid system.

**STEP 5** Shift the shift lever to the D or R position and carefully apply the accelerator to free the vehicle.

Turn off the TRAC and VSC systems if these functions are hampering your attempts to free the vehicle. (→P. 276)

---

**CAUTION**

- **When attempting to free a stuck vehicle**
  
  If you choose to push the vehicle back and forth to free it, make sure the surrounding area is clear to avoid striking other vehicles, objects or people. The vehicle may also lunge forward or lunge back suddenly as it becomes free. Use extreme caution.

- **When shifting the shift lever**

  Be careful not to shift the shift lever with the accelerator pedal depressed. This may lead to unexpected rapid acceleration of the vehicle that may cause an accident resulting in death or serious injury.

---

**NOTICE**

- **To avoid damage to the hybrid transmission and other components**

  - Avoid spinning the wheels.
  
  - If the vehicle remains stuck even after these procedures are performed, the vehicle may require towing to be freed.
Only in an emergency, such as if it becomes impossible to stop the vehicle in the normal way, stop the vehicle using the following procedure:

**STEP 1** Steadily step on the brake pedal with both feet and firmly depress it.
Do not pump the brake pedal repeatedly as this will increase the effort required to slow the vehicle.

**STEP 2** Shift the shift lever to N.

- If the shift lever is shifted to N
  **STEP 3** After slowing down, stop the vehicle in a safe place by the road.
  **STEP 4** Stop the hybrid system.

- If the shift lever cannot be shifted to N
  **STEP 3** Keep depressing the brake pedal with both feet to reduce vehicle speed as much as possible.

**STEP 4** Stop the hybrid system by pressing and holding the “POWER” switch for 3 consecutive seconds or more.

**STEP 5** Stop the vehicle in a safe place by the road.

---

**CAUTION**

- If the hybrid system has to be turned off while driving
  Power assist for the brakes and steering wheel will be lost, making the brake pedal harder to depress and the steering wheel heavier to turn. Decelerate as much as possible before turning off the hybrid system.

Vehicle identification

- Vehicle identification number
  The vehicle identification number (VIN) is the legal identifier for your vehicle. This is the primary identification number for your Lexus. It is used in registering the ownership of your vehicle.

  This number is stamped on the top left of the instrument panel. On some models, this number is also stamped under the front passenger seat.

  This number is also on the Certification Label.

- Engine number
  The engine number is stamped on the engine block as shown.

### Lubrication system

**Oil capacity**
- **With filter**: 6.4 qt. (6.1 L, 5.3 Imp. qt.)
- **Without filter**: 6.0 qt. (5.7 L, 5.0 Imp. qt.)

*: The engine oil capacity is a reference quantity to be used when exchanging. Warm up the engine and turn off the hybrid system, wait more than 5 minutes, and check the oil level on the dipstick.

**Engine oil selection**

“Toyota Genuine Motor Oil” is used in your Lexus vehicle. Use Lexus approved “Toyota Genuine Motor Oil” or equivalent to satisfy the following grade and viscosity.

**Oil grade**: ILSAC multigrade engine oil

**Recommended viscosity**: SAE 0W-20

SAE 0W-20 is the best choice for good fuel economy and good starting in cold weather.

If SAE 0W-20 is not available, SAE 5W-20 oil may be used. However, it must be replaced with SAE 0W-20 at the next oil change.
Oil viscosity (0W-20 is explained here as an example):

- The 0W in 0W-20 indicates the characteristic of the oil which allows cold startability. Oils with a lower value before the W allow for easier starting of the engine in cold weather.

- The 20 in 0W-20 indicates the viscosity characteristic of the oil when the oil is at high temperature. An oil with a higher viscosity (one with a higher value) may be better suited if the vehicle is operated at high speeds, or under extreme load conditions.

How to read oil container label:

The ILSAC (International Lubricant Standardization and Approval Committee) Certification Mark is added to some oil containers to help you select the oil you should use.
## Cooling system

| Capacity       | 12.0 qt. (11.4 L, 10.0 Imp. qt.)
|                | 12.3 qt. (11.7 L, 10.3 Imp. qt.)*
|                | 2.0 qt. (1.9 L, 1.7 Imp. qt.)
| Ignition system |
| Spark plug     | DENSO FK20HR11
| Make           | 0.043 in. (1.1 mm)

### NOTICE

- **Iridium-tipped spark plugs**  
  Use only iridium-tipped spark plugs. Do not adjust the spark plug gap.

*: With towing package
## Electrical system

### 12-volt battery

Open voltage* at 68°F (20°C):

<table>
<thead>
<tr>
<th>Voltage Range</th>
<th>Description</th>
</tr>
</thead>
<tbody>

</tr>
<tr>
<td>12.2 — 12.4 V</td>
<td>Half charged</td>
</tr>
<tr>
<td>11.8 — 12.0 V</td>
<td>Discharged</td>
</tr>
</tbody>
</table>

*: Voltage checked 20 minutes after the hybrid system and all the lights are turned off.

Charging rates: 5 A max.

### Hybrid Transaxle

**Fluid capacity***

- **Front**: 4.9 qt. (4.6 L, 4.0 Imp. qt.)
- **Rear (AWD models)**: 1.9 qt. (1.8 L, 1.6 Imp. qt.)

**Fluid type**: Toyota Genuine ATF WS

*: The fluid capacity is a reference quantity. If replacement is necessary, contact your Lexus dealer.

---

**NOTICE**

- **Transmission fluid type**

  Using transmission fluid other than “Toyota Genuine ATF WS” may ultimately damage the transmission of your vehicle.
### Brakes

D: Wedge base bulbs (amber)  
E: H11 halogen bulbs
Your vehicle must use only unleaded gasoline. Premium unleaded gasoline with an octane rating of 91 (Research Octane Number 96) or higher required for optimum engine performance. If 91 octane cannot be obtained, you may use unleaded gasoline with an octane rating as low as 87 (Research Octane Number 91). Use of unleaded gasoline with an octane rating lower than 91 may result in engine knocking. Persistent knocking can lead to engine damage and should be corrected by refueling with higher octane unleaded gasoline.

At minimum, the gasoline you use should meet the specifications of ASTM D4814 in the U.S.A. and CGSB3.5-M93 in Canada.

Fuel tank opening for unleaded gasoline
To help prevent incorrect fueling, your Lexus has a fuel tank opening that only accommodates the special nozzle on unleaded fuel pumps.

If your engine knocks
- Consult your Lexus dealer.
- You may occasionally notice light knocking for a short time while accelerating or driving uphill. This is normal and there is no need for concern.

Gasoline quality
In very few cases, driveability problems may be caused by the brand of gasoline you are using. If driveability problems persist, try changing the brand of gasoline. If this does not correct the problem, consult your Lexus dealer.
Gasoline quality standards

Automotive manufacturers in the US, Europe and Japan have developed a specification for fuel quality called the World-Wide Fuel Charter (WWFC) that is expected to be applied worldwide.

The WWFC consists of four categories that are based on required emission levels. In the US, category 4 has been adopted.

The WWFC improves air quality by lowering emissions in vehicle fleets, and customer satisfaction through better performance.

Lexus recommends the use of gasoline containing detergent additives

Lexus recommends the use of gasoline that contains detergent additives to avoid build-up of engine deposits.

All gasoline sold in the US contains detergent additives to clean and/or keep clean intake systems.

Lexus recommends the use of cleaner burning gasoline

Cleaner burning gasoline, including reformulated gasoline that contains oxygenates such as ethanol or MTBE (Methyl Tertiary Butyl Ether) is available in many areas.

Lexus recommends the use of cleaner burning gasoline and appropriately blended reformulated gasoline. These types of gasoline provide excellent vehicle performance, reduce vehicle emissions and improve air quality.
Lexus does not recommend blended gasoline

Use only gasoline containing a maximum of 10% ethanol.

DO NOT use any flex-fuel or gasoline that could contain more than 10% ethanol, including from any pump labeled E15, E30, E50, E85 (which are only some examples of fuel containing more than 10% ethanol).

If you use gasohol in your Lexus, be sure that it has an octane rating no lower than 87.

Lexus DOES NOT recommend the use of gasoline containing methanol.

Lexus does not recommend gasoline containing MMT

Some gasoline contains octane enhancing additive called MMT (Methylcyclopentadienyl Manganese Tricarbonyl).

Lexus DOES NOT recommend the use of gasoline that contains MMT. If fuel containing MMT is used, your emission control system may be adversely affected.

The malfunction indicator lamp on the instrument cluster may come on. If this happens, contact your Lexus dealer for service.
NOTICE

■ Notice on fuel quality
  ● Do not use improper fuels. If improper fuels are used the engine will be damaged.
  ● Do not use leaded gasoline. Lead gasoline can cause damage to your vehicle’s three-way catalytic converters causing the emission control system to malfunction.
  ● Do not use gasohol other than that stated here. Other gasohol may cause fuel system damage or vehicle performance problems.
  ● Using unleaded gasoline with an octane number or rating lower than that stated here will cause persistent heavy knocking. At worst, this will lead to engine damage.

■ Fuel-related poor driveability
  If after using a different type of fuel, poor driveability is encountered (poor hot starting, vaporization, engine knocking, etc.), discontinue the use of that type of fuel.

■ When refueling with gasohol
  Take care not to spill gasohol. It can damage your vehicle’s paint.
6-1. Specifications

Tire information

Typical tire symbols

► Standard tire

 ► Compact spare tire

1 Tire size  (→P. 683)
2 DOT and Tire Identification Number (TIN)  (→P. 682)
3 Location of treadwear indicators  (→P. 532)
4 Tire ply composition and materials
Plies are layers of rubber-coated parallel cords. Cords are the strands which form the plies in a tire.

5 Radial tires or bias-ply tires
A radial tire has “RADIAL” on the sidewall. A tire not marked “RADIAL” is a bias-ply tire.

6 TUBELESS or TUBE TYPE
A tubeless tire does not have a tube and air is directly put into the tire. A tube type tire has a tube inside the tire and the tube maintains the air pressure.

7 Load limit at maximum cold tire inflation pressure (→ P. 536)

8 Maximum cold tire inflation pressure (→ P. 673)
This means the pressure to which a tire may be inflated.

9 Uniform tire quality grading
For details, see “Uniform tire quality grading” that follows.

10 Summer tire or all season tire (→ P. 536)
An all season tire has “M+S” on the sidewall. A tire not marked “M+S” is a summer tire.

11 “TEMPORARY USE ONLY” (→ P. 638)
A compact spare tire is identified by the phrase “TEMPORARY USE ONLY” molded on its sidewall. This tire is designed for temporary emergency use only.
Typical DOT and tire identification number (TIN)

1. DOT symbol*
2. Tire Identification Number (TIN)
3. Tire manufacturer's identification mark
4. Tire size code
5. Manufacturer's optional tire type code (3 or 4 letters)
6. Manufacturing week
7. Manufacturing year

*: The DOT symbol certifies that the tire conforms to applicable Federal Motor Vehicle Safety Standards.
6-1. Specifications

**Tire size**

**Typical tire size information**

The illustration indicates typical tire size.

1. Tire use
   (P = Passenger car, T = Temporary use)
2. Section width (millimeters)
3. Aspect ratio
   (tire height to section width)
4. Tire construction code
   (R = Radial, D = Diagonal)
5. Wheel diameter (inches)
6. Load index (2 digits or 3 digits)
7. Speed symbol
   (alphabet with one letter)

**Tire dimensions**

1. Section width
2. Tire height
3. Wheel diameter
Tire section names

1. Bead
2. Sidewall
3. Shoulder
4. Tread
5. Belt
6. Inner liner
7. Reinforcing rubber
8. Carcass
9. Rim lines
10. Bead wires
11. Chafer

Uniform Tire Quality Grading

This information has been prepared in accordance with regulations issued by the National Highway Traffic Safety Administration of the U.S. Department of Transportation. It provides the purchasers and/or prospective purchasers of Lexus vehicles with information on uniform tire quality grading.

Your Lexus dealer will help answer any questions you may have as you read this information.

DOT quality grades

All passenger vehicle tires must conform to Federal Safety Requirements in addition to these grades. Quality grades can be found where applicable on the tire sidewall between tread shoulder and maximum section width.

For example: Treadwear 200 Traction AA Temperature A
**Treadwear**

The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course.

For example, a tire graded 150 would wear one and a half (1 1/2) times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

**Traction AA, A, B, C**

The traction grades, from highest to lowest, are AA, A, B and C, and they represent the tire's ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete.

A tire marked C may have poor traction performance.

Warning: The traction grade assigned to this tire is based on braking (straight ahead) traction tests and does not include cornering (turning) traction.
Temperature A, B, C

The temperature grades are A (the highest), B, and C, representing the tire's resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel.

Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure.

The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

Warning: The temperature grades for this tire are established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause heat buildup and possible tire failure.
## Glossary of tire terminology

<table>
<thead>
<tr>
<th>Tire related term</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cold tire inflation pressure</td>
<td>Tire pressure when the vehicle has been parked for three hours or more, or has not been driven more than 1 mile or 1.5 km under that condition</td>
</tr>
<tr>
<td>Maximum inflation pressure</td>
<td>The maximum cold inflated pressure to which a tire may be inflated, shown on the sidewall of the tire</td>
</tr>
<tr>
<td>Recommended inflation pressure</td>
<td>Cold tire inflation pressure recommended by a manufacturer</td>
</tr>
<tr>
<td>Accessory weight</td>
<td>The combined weight (in excess of those standard items which may be replaced) of automatic transmission, power steering, power brakes, power windows, power seats, radio and heater, to the extent that these items are available as factory-installed equipment (whether installed or not)</td>
</tr>
<tr>
<td>Curb weight</td>
<td>The weight of a motor vehicle with standard equipment, including the maximum capacity of fuel, oil and coolant, and if so equipped, air conditioning and additional weight optional engine</td>
</tr>
<tr>
<td>Maximum loaded vehicle weight</td>
<td>The sum of: (a) Curb weight (b) Accessory weight (c) Vehicle capacity weight (d) Production options weight</td>
</tr>
<tr>
<td>Normal occupant weight</td>
<td>150 lb. (68 kg) times the number of occupants specified in the second column of Table 1* that follows</td>
</tr>
<tr>
<td>Tire related term</td>
<td>Meaning</td>
</tr>
<tr>
<td>---------------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Occupant distribution</td>
<td>Distribution of occupants in a vehicle as specified in the third column of Table 1* below</td>
</tr>
<tr>
<td>Production options weight</td>
<td>The combined weight of installed regular production options weighing over 5 lb. (2.3 kg) in excess of the standard items which they replace, not previously considered in curb weight or accessory weight, including heavy duty brakes, ride levelers, roof rack, heavy duty 12-volt battery, and special trim</td>
</tr>
<tr>
<td>Rim</td>
<td>A metal support for a tire or a tire and tube assembly upon which the tire beads are seated</td>
</tr>
<tr>
<td>Rim diameter (Wheel diameter)</td>
<td>Nominal diameter of the bead seat</td>
</tr>
<tr>
<td>Rim size designation</td>
<td>Rim diameter and width</td>
</tr>
<tr>
<td>Rim type designation</td>
<td>The industry manufacturer’s designation for a rim by style or code</td>
</tr>
<tr>
<td>Rim width</td>
<td>Nominal distance between rim flanges</td>
</tr>
<tr>
<td>Vehicle capacity weight</td>
<td>The rated cargo and luggage load plus 150 lb. (68 kg) times the vehicle’s designated seating capacity</td>
</tr>
<tr>
<td>Vehicle maximum load on the tire</td>
<td>The load on an individual tire that is determined by distributing to each axle its share of the maximum loaded vehicle weight, and dividing by two</td>
</tr>
<tr>
<td>Vehicle normal load on the tire</td>
<td>The load on an individual tire that is determined by distributing to each axle its share of curb weight, accessory weight, and normal occupant weight (distributed in accordance with Table 1* below), and dividing by two</td>
</tr>
<tr>
<td>Weather side</td>
<td>The surface area of the rim not covered by the inflated tire</td>
</tr>
<tr>
<td>Tire related term</td>
<td>Meaning</td>
</tr>
<tr>
<td>------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Bead</td>
<td>The part of the tire that is made of steel wires, wrapped or reinforced by ply cords and that is shaped to fit the rim</td>
</tr>
<tr>
<td>Bead separation</td>
<td>A breakdown of the bond between components in the bead</td>
</tr>
<tr>
<td>Bias ply tire</td>
<td>A pneumatic tire in which the ply cords that extend to the beads are laid at alternate angles substantially less than 90 degrees to the centerline of the tread</td>
</tr>
<tr>
<td>Carcass</td>
<td>The tire structure, except tread and sidewall rubber which, when inflated, bears the load</td>
</tr>
<tr>
<td>Chunking</td>
<td>The breaking away of pieces of the tread or sidewall</td>
</tr>
<tr>
<td>Cord</td>
<td>The strands forming the plies in the tire</td>
</tr>
<tr>
<td>Cord separation</td>
<td>The parting of cords from adjacent rubber compounds</td>
</tr>
<tr>
<td>Cracking</td>
<td>Any parting within the tread, sidewall, or innerliner of the tire extending to cord material</td>
</tr>
<tr>
<td>CT</td>
<td>A pneumatic tire with an inverted flange tire and rim system in which the rim is designed with rim flanges pointed radially inward and the tire is designed to fit on the underside of the rim in a manner that encloses the rim flanges inside the air cavity of the tire</td>
</tr>
<tr>
<td>Extra load tire</td>
<td>A tire designed to operate at higher loads and at higher inflation pressures than the corresponding standard tire</td>
</tr>
<tr>
<td>Groove</td>
<td>The space between two adjacent tread ribs</td>
</tr>
<tr>
<td>Innerliner</td>
<td>The layer(s) forming the inside surface of a tubeless tire that contains the inflating medium within the tire</td>
</tr>
<tr>
<td>Innerliner separation</td>
<td>The parting of the innerliner from cord material in the carcass</td>
</tr>
<tr>
<td>Tire related term</td>
<td>Meaning</td>
</tr>
<tr>
<td>----------------------------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
</tbody>
</table>
| Intended outboard sidewall             | (a) The sidewall that contains a whitewall, bears white lettering, or bears manufacturer, brand, and/or model name molding that is higher or deeper than the same molding on the other sidewall of the tire, or  
(b) The outward facing sidewall of an asymmetrical tire that has a particular side that must always face outward when mounted on a vehicle |
<p>| Light truck (LT) tire                  | A tire designated by its manufacturer as primarily intended for use on lightweight trucks or multipurpose passenger vehicles                                                                                                                                       |
| Load rating                            | The maximum load that a tire is rated to carry for a given inflation pressure                                                                                                                                                                                      |
| Maximum load rating                    | The load rating for a tire at the maximum permissible inflation pressure for that tire                                                                                                                                                                            |
| Maximum permissible inflation pressure | The maximum cold inflation pressure to which a tire may be inflated                                                                                                                                                                                             |
| Measuring rim                          | The rim on which a tire is fitted for physical dimension requirements                                                                                                                                                                                          |
| Open splice                            | Any parting at any junction of tread, sidewall, or innerliner that extends to cord material                                                                                                                                                                        |
| Outer diameter                         | The overall diameter of an inflated new tire                                                                                                                                                                                                                   |
| Overall width                          | The linear distance between the exteriors of the sidewalls of an inflated tire, including elevations due to labeling, decorations, or protective bands or ribs                                                                                                           |
| Passenger car tire                     | A tire intended for use on passenger cars, multipurpose passenger vehicles, and trucks, that have a gross vehicle weight rating (GVWR) of 10,000 lb. or less.                                                                                                      |
| Ply                                    | A layer of rubber-coated parallel cords                                                                                                                                                                                                                     |</p>
<table>
<thead>
<tr>

6-2. Customization

Customizable features

Your vehicle includes a variety of electronic features that can be personalized to suit your preferences. Programming of these preferences can be performed by your Lexus dealer.

It is also possible to customize certain vehicle features yourself using the multi-information switches and the navigation system screen.

When customizing vehicle features, ensure that the vehicle is parked in a safe place with the shift lever in P and the parking brake set.

Press and hold the menu switch of the multi-information switches to display customize mode.

Customizing vehicle features

It is possible to customize certain vehicle features using the multi-information switches.*

*: For instructions on customizing vehicle features using the navigation system screen, refer to the “Navigation System Owner’s Manual”.

Some function settings are changed simultaneously with other functions being customized. Contact your Lexus dealer for further details.
6-2. Customization

1 Press the “ENTER” switch upwards or downwards to select the item to be customized.
2 Press the “ENTER” switch to confirm.

1 Press the “ENTER” switch upwards or downwards to select the desired setting for the item being customized.
2 Press the “ENTER” switch to confirm.

When customization is completed, press the menu switch to clear the customization screen.
### Customizable Features

1. Vehicles with a navigation system: Settings that can be changed using the screen of the navigation system
2. Vehicles with a navigation system: Settings that can be changed using the multi-information switches
3. Vehicles without a navigation system: Settings that can be changed using the multi-information switches
4. Settings that can be changed by your Lexus dealer

In the following situations, customize mode will automatically be turned off.
- A warning message appears after the customize mode screen is displayed.
- The “POWER” switch is turned off.
- The vehicle begins to move while the customize mode screen is displayed.

**CAUTION**

Cautions during customization
As the hybrid system needs to be operating during customization, ensure that the vehicle is parked in a place with adequate ventilation. In a closed area such as a garage, exhaust gases including harmful carbon monoxide (CO) may collect and enter the vehicle. This may lead to death or a serious health hazard.

**NOTICE**

During customization
To prevent 12-volt battery discharge, ensure that the hybrid system is operating while customizing features.
The following items must be initialized for normal system operation in cases such as after the 12-volt battery is reconnected, or maintenance is performed on the vehicle.

<table>

Reporting safety defects for U.S. owners..................... 704
Seat belt instructions for Canadian owners (in French)............................. 705
SRS airbag instructions for Canadian owners (in French)............................. 708
If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying the Lexus Division of Toyota Motor Sales, U.S.A., Inc. (Toll-free: 1-800-25-LEXUS).

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or Lexus Division of Toyota Motor Sales, U.S.A., Inc.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to http://www.safercar.gov; or write to: Administrator, NHTSA, 1200 New Jersey Ave, S.E., Washington, DC 20590. You can also obtain other information about motor vehicle safety from http://www.safercar.gov.
The following is a French explanation of seat belt instructions extracted from the seat belt section in this manual.

See the seat belt section for more detailed seat belt instructions in English.

Utilisation correcte des ceintures de sécurité

- Déroulez la sangle diagonale de telle sorte qu’elle passe bien sur l’épaule, sans pour autant être en contact avec votre cou ou glisser de votre épaule.
- Placez la sangle abdominale le plus bas possible sur les hanches.
- Réglez la position du dossier de siège. Asseyez-vous le dos le plus droit possible et calez-vous bien dans le siège.
- Ne vrillez pas la ceinture de sécurité.
Guide confort de ceinture de sécurité (sièges arrière extérieurs)

Si la sangle diagonale gêne la personne au niveau du cou, utilisez le guide confort de la ceinture de sécurité.

Sortez le guide confort de sa poche.

Engagez la ceinture dans le guide.

Le cordon élastique doit passer sous la ceinture de sécurité.

Bouclez la ceinture de sécurité, puis positionnez-la et lâchez-la.
Entretien et soin

- **Ceintures de sécurité**

  Nettoyez avec un chiffon ou une éponge humectée d’eau savonneuse tiède. Profitez de l’occasion pour vérifier régulièrement que les ceintures ne sont pas effilochées, entaillées, ou ne paraissent pas exagérément usées.

<table>
<thead>
<tr>
<th>ATTENTION</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Détérioration et usure des ceintures de sécurité</strong></td>
</tr>
</tbody>
</table>

Inspectez les ceintures de sécurité périodiquement. Contrôlez qu’elles ne sont pas entaillées, effilochées, et que leurs ancrages ne sont pas desserrés. N’utilisez pas une ceinture de sécurité défectueuse avant qu’elle ne soit remplacée. Une ceinture de sécurité défectueuse n’apporte aucune garantie de protection de l’occupant en cas d’accident.
The following is a French explanation of SRS airbag instructions extracted from the SRS airbag section in this manual.

See the SRS airbag section for more detailed SRS airbag instructions in English.

Sacs de sécurité gonflables SRS frontaux

1 Sac de sécurité gonflable conducteur/sac de sécurité gonflable passager avant SRS
   Participant à la protection de la tête et du thorax du conducteur et du passager avant contre les chocs avec les éléments de l’habitacle

2 Sacs de sécurité gonflables SRS de genoux
   Participant à la protection du conducteur et du passager avant
Sacs de sécurité gonflables SRS latéraux et rideau

3 Sacs de sécurité gonflables SRS latéraux avant
   Participent à la protection du haut du corps des occupants aux places avant

4 Sacs de sécurité gonflables SRS latéraux arrière
   Participent à la protection du thorax des occupants assis aux places arrière extérieures

5 Sacs de sécurité gonflables SRS rideau
   Participent principalement à la protection de la tête des occupants assis aux places extérieures
Composition du système de sacs de sécurité gonflables SRS

1. Sacs de sécurité gonflables de genoux
2. Sac de sécurité gonflable passager avant
3. Sacs de sécurité gonflables rideau
4. Sacs de sécurité gonflables latéraux avant
5. Système de détection des occupants (calculateur électronique et capteurs)
6. Témoins indicateurs “AIR BAG ON” et “AIR BAG OFF”
7. Sacs de sécurité gonflables latéraux arrière
8. Témoin d’alerte SRS
9. Sac de sécurité gonflable conducteur
10. Capteurs de sacs de sécurité gonflables rideau
11. Capteurs de sacs de sécurité gonflables latéraux et rideau
12. Contacteur de boucle de ceinture de sécurité conducteur
13. Capteur de position du siège conducteur
14. Boîtier électronique de sacs de sécurité gonflables
15. Capteurs de sacs de sécurité gonflables frontaux
16. Contacteur de boucle de ceinture de sécurité passager avant
Votre véhicule est équipé de SACS DE SÉCURITÉ GONFLABLES INTELLIGENTS (ADVANCED AIRBAGS) conçus selon les normes de sécurité américaines applicables aux véhicules à moteur (FMVSS208). Le système de sacs de sécurité gonflables régule la puissance de déploiement des sacs de sécurité gonflables conducteur et passager avant. Le système de sac de sécurité gonflable conducteur comprend le capteur de position du siège conducteur, etc. Le système de sac de sécurité gonflable passager avant comprend le capteur de classification des occupants du siège passager avant, etc.

Les principaux éléments du système de sacs de sécurité gonflables SRS sont illustrés ci-dessus. Le système des sacs de sécurité gonflables SRS est commandé par un boîtier électronique. Ce boîtier intègre un capteur de sécurité et un capteur de sac de sécurité gonflable.

Lorsque la violence du choc frontal ou latéral l’exige, le système de sacs de sécurité gonflables SRS déclenche les dispositifs pyrotechniques de gonflage (générateurs de gaz). Le déploiement rapide des sacs de sécurité gonflables est obtenu au moyen d’une réaction chimique dans les dispositifs pyrotechniques, qui produit un gaz inoffensif permettant d’amortir le mouvement des occupants.
**ATTENTION**

- **Précautions avec les sacs de sécurité gonflables SRS**

  Respectez les précautions suivantes concernant les sacs de sécurité gonflables SRS. À défaut, des blessures graves, voire mortelles, pourraient s’ensuivre.

  - Le conducteur et tous les passagers à bord du véhicule doivent porter leur ceinture de sécurité correctement.
  - Les sacs de sécurité gonflables SRS sont des dispositifs de protection complémentaires aux ceintures de sécurité.
  - Le sac de sécurité gonflable SRS conducteur se déploie avec une violence considérable, qui peut être très dangereuse voire mortelle si le conducteur se trouve très près du sac de sécurité gonflable. L’autorité fédérale chargée de la sécurité routière aux États-Unis, la “NHTSA” (National Highway Traffic Safety Administration) conseille:

    La zone à risque du sac de sécurité gonflable conducteur se situant dans les premiers 2 à 3 in. (50 - 75 mm) de déploiement, vous disposez d’une marge de sécurité confortable en vous plaçant à 10 in. (250 mm) de votre sac de sécurité gonflable conducteur. Cette distance est à mesurer entre le moyeu du volant de direction et le sternum. Si vous êtes assis à moins de 10 in. (250 mm), vous pouvez changer votre position de conduite de plusieurs façons:

    - Reculez votre siège le plus possible, tout en continuant à pouvoir atteindre confortablement les pédales.
    - Inclinez légèrement le dossier du siège.
    
    Bien que les véhicules puissent être différents les uns des autres, la plupart des conducteurs peuvent s’asseoir à une distance de 10 in. (250 mm), même avec le siège conducteur complètement avancé, simplement en inclinant un peu le dossier de siège. Si vous avez des difficultés à voir la route après avoir incliné votre siège, utilisez un coussin ferme et antidérapant pour vous rehausser ou, si votre véhicule est équipé du réglage en hauteur du siège, remontez-le.
    
    - Si votre volant de direction est réglable, inclinez-le vers le bas. Cela a pour effet d’orienter le sac de sécurité gonflable en direction de votre poitrine plutôt que de votre tête et de votre cou.

  Réglez votre siège selon ces recommandations de la NHTSA, tout en conservant le contrôle des pédales, du volant de direction et la vue des commandes du tableau de bord.
**ATTENTION**

Précautions avec les sacs de sécurité gonflables SRS

- Si vous attachez une rallonge de ceinture de sécurité à la boucle du siège conducteur, mais pas à la ceinture de sécurité proprement dite, le système de sac de sécurité gonflable SRS conducteur pense que vous avez attaché votre ceinture de sécurité, alors qu’en fait c’est faux. Dans ce cas, il se peut que le sac de sécurité gonflable conducteur ne se déploie pas correctement en cas d’accident, et vous risquez d’être tué ou grièvement blessé. Veillez donc à porter la ceinture de sécurité avec la rallonge de ceinture de sécurité.

- Le sac de sécurité gonflable SRS passager avant se déploie également avec une violence considérable, qui peut être très dangereuse voire mortelle si le passager avant se trouve très près du sac de sécurité gonflable. Éloignez le siège passager avant au maximum du sac de sécurité gonflable, et réglez le dossier de siège de sorte à être assis bien droit dans le siège.

- Les nourrissons et les enfants qui ne sont pas correctement assis et/ou protégés peuvent être grièvement blessés ou tués par le déploiement d’un sac de sécurité gonflable. Installez dans un siège de sécurité enfant les enfants trop jeunes pour pouvoir utiliser la ceinture de sécurité. Lexus recommande vivement d’installer tous les nourrissons et jeunes enfants aux places arrière du véhicule et de prévoir pour eux des systèmes de retenue adaptés. Les sièges arrière sont plus sûrs pour les nourrissons et les enfants que le siège passager avant.

- N’installez jamais un siège de sécurité enfant type dos à la route sur le siège passager avant, même si le témoin “AIR BAG OFF” est allumé. En cas d’accident, la force de déploiement rapide du sac de sécurité gonflable passager avant peut grièvement, voire mortellement blesser l’enfant si le siège de sécurité enfant type dos à la route est installé sur le siège passager avant.
**ATTENTION**

**Précautions avec les sacs de sécurité gonflables SRS**

- Ne pas s’asseoir sur le bord du siège et ne pas s’appuyer contre la planche de bord.

- Ne laissez pas un enfant rester debout devant le sac de sécurité gonflable SRS passager avant ou bien s’asseoir sur les genoux du passager avant.

- Ne laissez pas les occupants des sièges avant voyager avec un objet sur les genoux.

- Ne vous appuyez pas contre la porte, contre le rail latéral de toit ou contre les montants avant, latéraux et arrière.

- Interdisez à quiconque de s’agenouiller sur les sièges passagers en appui contre la porte ou de sortir la tête ou les mains à l’extérieur du véhicule.
Pour les propriétaires

ATTENTION

Précautions avec les sacs de sécurité gonflables SRS

- Ne rien fixer ou appuyer contre la planche de bord, la garniture centrale du moyeu de volant de direction ou la partie inférieure du tableau de bord.
  Au déploiement des sacs de sécurité gonflables SRS conducteur, passager avant et genoux, tout objet risque de se transformer en projectile.

- Ne rien fixer aux portes, à la vitre de pare-brise, aux vitres latérales, aux montants avant et arrière, au rail latéral de toit ou à la poignée de maintien.

- Ne suspendez aux crochets à vêtements aucun cintre nu ni aucun objet dur. En cas de déploiement des sacs de sécurité gonflables rideau SRS, tous ces objets pourraient se transformer en projectiles et causer des blessures graves, voire mortelles.

- Si un cache en vinyle est mis dans la zone où les sacs de sécurité gonflable SRS de genoux se déploie, assurez-vous de l’enlever.

- N’utilisez aucun accessoire de siège venant recouvrir les zones de déploiement des sacs de sécurité gonflables SRS latéraux, car il risquerait d’en gêner le déploiement. De tels accessoires peuvent empêcher les sacs de sécurité gonflables latéraux de fonctionner correctement, désactiver le dispositif ou entraîner le déploiement accidentel des sacs de sécurité latéraux, entraînant la mort ou des blessures graves.

- Évitez de faire subir des chocs ou des pressions excessives aux zones renfermant les composants des sacs de sécurité gonflables SRS.
  En effet, cela pourrait entraîner un fonctionnement anormal des sacs de sécurité gonflables SRS.
ATTENTION

Précautions avec les sacs de sécurité gonflables SRS

- Ne touchez aucun composant du système immédiatement après le déclenchement (déploiement) des sacs de sécurité gonflables SRS, car ils sont alors encore très chauds.

- Si vous avez des difficultés à respirer après le déploiement des sacs de sécurité gonflables SRS, ouvrez une porte ou une vitre pour faire entrer de l’air frais, ou bien descendez du véhicule si cela ne présente pas de danger. Essuyez tout résidu dès que possible afin d’éviter d’éventuelles irritations de la peau.

- Si les parties renfermant les sacs de sécurité gonflables SRS, telles que la garniture du moyeu de volant et les garnitures de montants avant et arrière, apparaissent abîmées ou craquelées, faites-les remplacer par votre concessionnaire Lexus.

- Ne rien placer sur le siège du passager avant, comme un coussin par exemple. Cela a pour conséquence de répartir le poids du passager sur toute la surface du siège, ce qui empêche le capteur de détecter normalement le poids du passager. En conséquence, le sac de sécurité gonflable SRS passager avant risque de ne pas se déployer en cas de choc.
ATTENTION

Modification et mise au rebut des éléments du système de sacs de sécurité gonflables SRS

Consultez impérativement votre concessionnaire Lexus si vous avez besoin d’intervenir sur votre véhicule ou de procéder à l’une des modifications suivantes. Les sacs de sécurité gonflables SRS risquent de ne pas fonctionner correctement ou de se deployer (gonfler) accidentellement, provoquant ainsi des blessures graves, voire mortelles.

- Installation, dépose, démontage et réparations des sacs de sécurité gonflables SRS
- Réparations, modifications, démontage ou remplacement du volant, du tableau de bord, de la planche de bord, des sièges ou de leur garnissage, des montants avant, latéraux et arrière ou des rails latéraux de toit
- Réparation ou modification des ailes avant, du bouclier avant, ou des flancs de l’habitacle
- Installation de chasse-neige, de treuils, etc., sur la calandre (pare-buffle ou pare-kangourou, etc.)
- Modification des suspensions du véhicule
- Installation d’appareils électroniques tels que radio-émetteurs/récepteurs ou lecteurs CD
- Aménagements du véhicule visant à permettre sa conduite par une personne atteinte d’un handicap physique
For vehicles with a navigation system, refer to the “Navigation System Owner’s Manual” for information regarding the equipment listed below.

- Navigation system
- Air conditioning controls
- Windshield wiper de-icer
- Rear view monitor system
- Intuitive parking assist
- Audio/video system
- Rear window and outside rear view mirror defogging
