THEFT DETERRENT SYSTEM

To deter theft of the vehicle, this system is designed to give an alarm and keep the engine from being started if any of the doors, trunk and hood is forcibly unlocked or the battery terminal is disconnected and then reconnected while the vehicle is locked.

The alarm blows the horn intermittently and flashes the headlights, tail lights and other exterior lights. The engine cannot be started because the starter circuit will be disabled.

When the front doors are locked, the system will give you a period of 30 seconds before it is set, during which the doors, trunk and hood may be opened.

During this period, if either of the front doors is opened using a key or wireless door lock remote control, the system will be cancelled.

4. After making sure the indicator light starts flashing, you may depart from the vehicle.

The system will automatically be set after the 30 second period elapses. The indicator light will flash to show the system is set. If any of the doors, trunk or hood is opened at that time, setting is interrupted until it is closed and locked.

Never leave anyone in the vehicle when you set the system, because unlocking from the inside will activate the system.

When the system is set

SYSTEM ACTIVATION

The trunk opener circuit is disabled, so the trunk must be opened by key.

The system will sound the alarm and disable the starter circuit under the following conditions:

• If any of the doors, trunk or hood is unlocked without using the key.

• If the battery terminal is disconnected and then reconnected.

Setting the system

1. Turn the ignition key to the “LOCK” position and remove it.

2. Driver and passengers get out of the vehicle.

3. Close and lock all the doors, trunk and hood.

The indicator light will come on when all the doors, trunk and hood are closed and locked.
After one minute, the alarm will automatically stop, but the starter circuit will remain disabled.

**REACTIVATING THE ALARM**

Once set, the system automatically resets the alarm each time all the doors, trunk and hood are closed after the alarm stops. The alarm will be activated again under the following conditions:
- If any of the doors, trunk or hood is opened
- If the battery terminal is disconnected and then reconnected.

**STOPPING THE ALARM**

Turn the ignition key from the “LOCK” to “ACC” position.

The alarm will be stopped but the starter circuit will remain disabled. Stopping the alarm in this manner will keep the alarm from being reactivated when any of the doors, trunk or hood is opened.

**INTERRUPTING THE SYSTEM**

With the system set, the trunk can be opened with the key without activating or cancelling the system. While it is open, the doors and hood may be opened in addition, and the system can be activated only by the battery terminal disconnection.

To resume the setting, close and lock all the doors, trunk and hood. The trunk must be closed with the key removed.

**Cancelling the system**

Open either of the front doors using an ignition key or wireless door lock remote control.

This cancels the system completely and the starter circuit will be reactivated at once.

**INDICATOR LIGHT**

The indicator light gives the following three indications when the system is in use. When the light is:

- **FLASHING** – The system is set. You need the key to open the doors, trunk or hood.
- **ON** – The system will automatically be set when the time comes. The doors, trunk or hood may be opened without an ignition key. The indicator light is also on when the alarm is being sounded.
- **OFF** – The system is inactive. You may open any door, trunk or hood.

**Testing the system**

1. Open all the windows.
2. Set the system as described above.
   Be sure to wait until the indicator light starts flashing.
3. Unlock one of the doors from the inside.
   The system should activate the alarm.
4. Open either front door with a key or the wireless door lock remote control to cancel the system.

5. Repeat this operation for the other doors and hood.

When testing on the hood, also check that the system is activated when the battery terminal is disconnected and then reconnected.

If the system does not work properly, have it checked by your Lexus dealer.

**NOTICE:**
Disconnecting the battery may result in the erasure of information you have set in the computer memory. After reconnecting the battery, check that the memorized data has been retained. If it has been erased, input it into the computer once more.

---

**THEFT PREVENTION LABELS**
(U.S.A. ONLY)

Your new vehicle carries theft prevention labels which are approximately 56 mm (2.20 inches) by 16 mm (0.63 inch).

The purpose of these labels is to reduce the incidence of vehicle thefts by facilitating the tracing and recovery of parts from stolen vehicles. The label is designed so that once it is applied to a surface, any attempt to remove it will result in destroying the integrity of the label. Transferring these labels intact from one part to another will be impossible.

**NOTICE:**
You should not attempt to remove the theft prevention labels as it may violate certain state or federal laws.
